

RHM 20 - Medium sized Coriolis Mass Flowmeter

The RHM 20 can measure flow rates up to 300 kg/min (660 lb/min) with temperatures in excess of 350°C and pressures up to 340 bar. This model is medium sized with true reliability for a versatile solution manufactured by Rheonik, the mass flowmeter experts.

GENERAL

Owing to its typical flow range (up to 300 kg/min) and wide number of variants, the RHM 20 is suitable for many applications.

As with all other Rheonik meters, this model is based on the patented Omega tube design with increased signal to noise ratio.

This unique design, which offers excellent performance and reliability, has created the most satisfied customers worldwide. Unlike other mass flowmeter manufacturers, Rheonik uses a patented torsion rod swinger with the Omega shape and support bars which results in high accuracy measurement, which is independent of pressure, even at very low flow velocities. The meter has also extremely good repeatability and high stability for critical applications.

APPLICATIONS

Suitable for virtually any mass flow application such as:

- Batching
- Dosing
- General flow control
- Injections
- Filling

FEATURES

The outstanding features include:

- Suitable for pressure up to 350 bar
- Typical measuring ranges from 3 kg/min to 300 kg/min
- Minimal flows as low as 2.25 kg/min
- Flow accuracy of 0.1%
- Repeatability better than 0.05%
- Optimised solutions for your batching operation
- Extra compact design with minimal space requirement
- EEx Approvals (i.e. ATEX, CSA, ...)
- Custody Transfer Approvals (i.e. PTB, NMI, ...)

ADVANTAGES

- No pressure effect – no deterioration of accuracy due to pressure changes by the patented Omega Shape
- Patented torsion swinger design assures longest life time and increased safety (low stress in welds and increased wall thickness against abrasion)
- No moving parts – practically no maintenance
- Removable connection block

Standard Models

Gold Line Models

For serial (single pipe/path) sanitary design Q_{max} is 150 kg/min (50%). Data above refer to standard wall thickness.
 Error of reading (including zero drift) indications refer to reference conditions H_2O , $18-24^\circ\text{C}$ ($66-76^\circ\text{F}$), 1-3 bar (15-45 psi).
 RHM sensor do not suffer from pressure effect due to torsional oscillation and semi circle (non-deforming) measurement section.
 Temperature changes of $\pm 25^\circ\text{C}$ around the operating point are negligible.
 Pressure drop refers to Newton liquids, with parallel measuring loops and block/manifold connection.
 Nominal flow refers to approx. 10 m/s (33 ft/sec) velocity in measuring loops for best performance.
Calibration to customer range, with increased accuracy, possible.
