Rosemount™ 708 Wireless Acoustic Transmitter
NOTICE

This guide provides basic guidelines for the Rosemount 708. It does not provide instructions for detailed configuration, diagnostics, maintenance, service, troubleshooting, or installations. Refer to the Rosemount 708 Reference Manual (document number 00809-0100-4708) for more instruction. This guide and the manual are available electronically on www.rosemount.com.

WARNING

Explosions could result in death or serious injury.

- Installation of this transmitter in an explosive environment must be in accordance with the appropriate local, national, and international standards, codes, and practices. Review the Product Certifications section for any restrictions associated with a safe installation.
- Before connecting a Field Communicator in an explosive atmosphere, ensure the instruments are installed in accordance with intrinsically safe field wiring practices.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions:
- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.
- This device must be installed to ensure a minimum antenna separation distance of 8-in. (20 cm) from all persons.

The power module may be replaced in a hazardous area. The power module has surface resistivity greater than one gigaohm and must be properly installed in the wireless device enclosure. Care must be taken during transportation to and from the point of installation to prevent a potential electrostatic charging hazard.

Polymer enclosure has surface resistivity greater than one gigaohm. Care must be taken during transportation to and from the point of installation to prevent a potential electrostatic charging hazard.

NOTICE

Shipping considerations for wireless products

The unit was shipped without the power module installed. Remove the power module prior to shipping the unit.

Each power module contains one “D” size primary lithium battery. Primary lithium batteries are regulated in transportation by the U.S. Department of Transportation, and are also covered by IATA (International Air Transport Association), ICAO (International Civil Aviation Organization), and ARD (European Ground Transportation of Dangerous Goods). It is the responsibility of the shipper to ensure compliance with these or any other local requirements. Consult current regulations and requirements before shipping.

1.0 Overview

Figure 1. Rosemount 708 Wireless Acoustic Transmitter

A. Power module cover — power module is inside device; unscrew cap for access
B. Waveguide — acoustic and temperature sensors
C. Electronics cover — cover is sealed and cannot be removed
D. Stainless steel mounting bands — used to connect the acoustic transmitter to the piping
E. Pipe — the acoustic transmitter is installed directly to the pipe

2.0 Wireless considerations

2.1 Power up sequence

The Emerson™ Smart Wireless Gateway should be installed and functioning properly before any wireless devices are powered. Install the power module, Smart Wireless 701PGNF into the Rosemount 708 to power the device. This results in a simpler and faster network installation. Enabling active advertising on the Gateway ensures new devices are able to join the network faster. For more information see the Smart Wireless Gateway Manual (document number 00809-0200-4420).

2.2 Antenna position

The antenna is internal to the acoustic transmitter. To achieve optimal range, orient the transmitter with the waveguide horizontal and the power module closest to the ground as shown in Figure 2. Good connectivity can also be achieved in other orientations. The antenna should also be approximately 3 ft. (1 m) from any large structure, building, or conductive surface to allow for clear communication to other devices.
3.0 Field Communicator connections

The power module needs to be installed in the device for the Field Communicator to interface with the Rosemount 708. This transmitter uses the green power module; order model number 701PGNKF. Field communication with this device requires a HART® protocol-based Field Communicator using the correct 708 DD. Field Communicator connections are located on the power module. The power module is keyed and can only be inserted in one orientation. Refer to Figure 3 for instructions on connecting the Field Communicator to the Rosemount 708.

4.0 Physical installation

The acoustic transmitter is connected directly to the piping being measured.

4.1 Mounting

For high temperature mounting, see page 5.

1. Locate the Rosemount 708 on a horizontal section of piping as close as possible to the equipment to be monitored. Align the waveguide of the transmitter as shown in Figure 4 and Figure 5.

2. The mounting location should be free of foreign matter and corrosion to ensure good contact between the piping and the waveguide.

3. Tighten each clamp to 90 in-lb (10.2 N-m). Trim the excess clamp band material to prevent unwanted acoustic noise.

4. If commissioning the device, install the green power module (see Figure 6).
5. Ensure the power module cover is fully tightened to prevent moisture ingress. The lip of the polymer power module cover should be in contact with the surface of the polymer enclosure to ensure a proper seal. Do not over tighten.

Figure 4. Transmitter Alignment

Figure 5. Transmitter Alignment Top View

Figure 6. Power Module Installation

Note
Wireless devices should be powered up in order of proximity from the Smart Wireless Gateway, beginning with the closest device to the Smart Wireless Gateway. This will result in faster network formation.

4.2 Mounting in a high temperature application

High temperature mounting hardware should be used when process temperatures exceed 260 °C (500 °F).
1. Place the foot of the transmitter in between the standoff mounting hardware plates as shown in Figure 7.
2. Press standoff plates together so plates and transmitter foot are aligned.
3. Tighten each screw to 90 in-lb (10,2 N-m).
4. Locate the Rosemount 708 and high temperature mounting hardware on a horizontal section of the piping as close as possible to the equipment to be monitored. The mounting location should be free of foreign matter and corrosion to ensure good contact between the piping and the mounting hardware.
5. Insert the U-bolt through the standoff mounting hardware.
6. Tighten each bolt to 90 in-lb (10,2 N-m) (see Figure 8).
7. If commissioning the device, install the green power module (see Figure 6).
8. Ensure the power module cover is fully tightened to prevent moisture ingress. The lip of the polymer power module cover should be in contact with the surface of the polymer enclosure to ensure a proper seal. Do not over tighten.

**Figure 7. High Temperature Mounting Hardware**
4.3 Mounting considerations

1. Mounting bands should be inspected periodically and re-tightened if necessary. Some loosening may occur after initial installation due to thermal expansion/contraction.

2. The waveguide must be in direct contact with the pipe unless the high temperature mounting hardware is being used.

3. Insulate process piping to minimize ambient temperature effects (see Figure 9). Insulation thickness over the top of the waveguide foot should not exceed 1-in. (2.54 cm).

4. For best results, mount the transmitter within 6-in. (15.24 cm) of the equipment to be monitored.

5. The stainless steel mounting bands could be affected by stress corrosion and potentially fail when in the presence of chlorides.

6. The transmitter should be installed such that steam or other high temperature fluids do not directly impinge the housing of the device.

7. If installing the device on a steam trap, the device should be installed on the upstream side of the trap.
5.0 Device network configuration

In order to communicate with the Smart Wireless Gateway, and ultimately the information system, the transmitter must be configured to communicate with the wireless network. This step is the wireless equivalent of connecting wires from a transmitter to the host system. Using a Field Communicator or AMS® Device Manager, enter the network ID and join key so they match the network ID and join key of the Gateway and other devices in the network. If the network ID and join key are not the same as the Gateway, the acoustic transmitter will not communicate with the network. The network ID and join key may be obtained from the Smart Wireless Gateway on the Setup>Network>Settings page on the web server, shown in Figure 10.
5.1 AMS Device Manager

Right click on the acoustic transmitter and select **Configure**. When the menu opens, select **Join Device to Network** and follow the method to enter the network ID and join key.

5.2 Field Communicator

The network ID and join key may be changed in the wireless device by using the following Fast Key sequence. Set both network ID and join key.

**Table 1. Setting the Network ID and Join Key**

<table>

<td>2, 1, 2</td>
<td>Network ID, Set Join Key</td>
</tr>
</tbody>
</table>

6.0 Verify operation

There are three ways to verify operation: using the Field Communicator, using the Smart Wireless Gateway’s integrated web interface, or by using AMS Suite Wireless Configurator or AMS Device Manager.

If the Rosemount 708 was configured with the network ID and join key, and sufficient time has passed, the transmitter will be connected to the network. If network ID and join key were not configured, reference “Troubleshooting” on page 11.

**Note**

It may take several minutes for the device to join the network.

6.1 Field Communicator

For HART protocol Wireless transmitter communication, a Rosemount 708 Device Driver (DD) is required. To obtain the latest DD, visit the Emerson Process Management Easy Upgrade site at: http://www2.emersonprocess.com/en-US/documentation/deviceinstallkits. The communication status may be verified in the wireless device using the following Fast Key sequence.

**Table 2. Communication Status Verification Fast Key Sequence**

<table>

</tr>
</thead>
<tbody>
<tr>
<td>Communications</td>
<td>3, 4</td>
<td>Join Status, Wireless Mode, Join Mode, Number of Available Neighbors, Number of Advertisements Heard, Number of Join Attempts</td>
</tr>
</tbody>
</table>
6.2 Smart Wireless Gateway

Using the Smart Wireless Gateway’s integrated web interface, navigate to the Explorer page as shown in Figure 11. Locate the device in question and verify all status indicators are good (green).

![Figure 11. Smart Wireless Gateway Explorer Page](image)

6.3 AMS Suite Wireless Configurator

When the device has joined the network, it will appear in the Device Manager as illustrated in Figure 12. For HART protocol Wireless transmitter communication, a 708 DD is required. To obtain the latest DD, visit the Emerson Process Management Easy Upgrade site at:

![Figure 12. Device Manager](image)
Note
SteamLogic™ software is provided for viewing steam trap status. Refer to the manual on the CD for more information.

6.4 Troubleshooting

If the device is not joined to the network after power up, verify the correct configuration of the network ID and join key, and that active advertising has been enabled on the Smart Wireless Gateway. The network ID and join key in the device must match the network ID and join key of the Gateway.

The network ID and join key may be obtained from the Gateway on the Setup>Network>Settings page of the web server (see Figure 13 on page 11). The network ID and join key may be changed in the wireless device by following the Fast Key sequence shown below.

6.5 Field Communicator use

**Note**
In order to communicate with a Field Communicator, power the Rosemount 708 by connecting the power module. For more information on the power module, refer to the Product Data Sheet (document number 00813-0100-4701).

Table 4 includes Fast Key sequences frequently used to interrogate and configure the device. For additional information, refer to the Rosemount 708 Reference Manual (document number 00809-0100-4708).

7.0 Product certifications
Rev 1.0

7.1 European Directive Information
A copy of the EC Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EC Declaration of Conformity can be found at www.rosemount.com.

7.2 Telecommunication Compliance
All wireless devices require certification to ensure they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification.

Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.

7.3 FCC and IC
This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions: This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

7.4 Ordinary Location Certification from FM Approvals
As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by FM Approvals, a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

7.5 Installing in North America
The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

No: RMD 1084 Rev. F

We,

Rosemount, Inc.
8200 Market Boulevard
Chanhassen, MN 55317-9685
USA

declare under our sole responsibility that the product,

Rosemount 708 Wireless Acoustic Transmitter

manufactured by,

Rosemount, Inc.
8200 Market Boulevard
Chanhassen, MN 55317-9685
USA

to which this declaration relates, is in conformity with the provisions of the European Union Directives, including the latest amendments, as shown in the attached schedule.

Assumption of conformity is based on the application of the harmonized standards and, when applicable or required, a European Union notified body certification, as shown in the attached schedule.
