
ABB MEASUREMENT & ANALYTICS | DATA SHEET

C1300

Advanced circular chart recorder

Measurement made easy

C1300 – dependable recording in a rugged, functional instrument

High-definition backlit display

- latest LCD panel display technology ensures instrument operation and configuration is as easy as possible

Simple-to-configure totalizers

- automatic calculation of the relationship between units of measure and volume flow units

Designed to survive

- environmental protection options up to NEMA 4X for the entire recorder, providing reliable operation for wall-, panel- and pipe-mount versions

Fully field-upgradeable

- additional options easy to add

Configuration backup

- ability to backup and restore configurations from a PC

C1300

The C1300 is an advanced, programmable circular chart recorder for up to four process signals. The C1300's straightforward operator controls and robust construction make it suitable for a variety of industrial environments. With many features supplied as standard and a powerful range of options, the C1300 is a truly flexible unit that can adapt to match your process requirements.

Clear, intuitive display menus

Comprehensive process information

The C1300 incorporates up to two graphical display panels to keep the operator informed of process status. Each panel is capable of displaying up to eight lines of descriptive text to simplify both configuration and operation of the recorder. The display technology used increases visibility in high ambient light conditions.

Simple operation

The clearly-labelled tactile keypad gives direct access for operator adjustments and configuration, without the need to open the recorder's door. Clear text prompts on the digital displays guide the user through the various menus. A password-protected security system prevents unauthorized access to configuration adjustment menus.

...C1300

Advanced totalizer technology

The C1300 features some of the most advanced totalizing features of any recording instrument, giving it the ability to autoconfigure totalizers to specific requirements. For example, it is possible to measure flow in one volumetric unit and totalize in another; the C1300 automatically calculates the relationship between the two volume units and configures this information. No longer is it necessary to deal with unit conversion tables and timebases.

Totalizer control is enhanced further by reset functionality that is set in real-time. If the totalizer is required to reset at midnight every Sunday simply set it to do so. Totalizer logs also eliminate the requirement for the operator to go to the recorder at the same time each day to take readings. The totalizer log contains historical information of the date, time and individual totalizer values; enabling comparison of process volumes directly from the front panel of the recorder.

Comprehensive flow totalizer displays

PC configuration backup

Fitted as standard to every C1300 is a PC Configuration Backup port. Using this port, an instrument's configuration can be both uploaded and downloaded to a PC, enabling a backup of a recorder's configuration to be saved for future use. Configuration time of multiple units with similar configurations is also greatly reduced via use of this feature.

Timers and clock

The C1300 provides two event timers driven by the recorder's real-time clock. The timers can be configured to operate relays, start/stop the chart or trigger other actions within the recorder; such as allowing alarm annunciation only during night hours.

Alarm annunciation enabled during night hours only

Connecting your PC to the recorder

Math and logic

Optional math functions, mass flow calculations and RH tables are available, enabling the solving of real process problems, quickly and simply. Math functions include addition, subtraction, multiplication and division.

Logic capability is provided as standard, for interlocking and integration of discrete and continuous functions to address a wide range of process criteria.

Boolean logic functions enable the grouping of alarms to a single 'common-trouble' relay, saving time and money or allowing interlocking to create almost infinite combinations of 'If...Then' scenarios.

Built to meet your needs

The C1300's modular architecture enables a high level of hardware choice.

The standard input/output module supplied with every pen comes complete with a fully isolated universal analog input, a relay output, transmitter power supply, an isolated analog output and two digital inputs.

Further input and output capability is provided by a range of plug-in modules:

- Four relays – channel alarm outputs
- Eight digital inputs – linked using logic equations
- Eight digital outputs – TTL level alarm outputs
- True-time event pen (Violet) – event pen is additional to standard pens
- Modbus RS485 communications – interfaces with PCs

Expandable for the future

The C1300 can be upgraded quickly to meet your changing process requirements.

Additional recording channels, math capability or input and output functions can be retrofitted on-site using plug-in modules and easily-fitted pen arms. Input calibration data is stored on each card, enabling quick changes of input modules without the need for recalibration.

Changes to input sensors or recording requirements are accommodated by reconfiguration using the keypad.

Modular design enables unit to be upgraded quickly

Modbus RS485 communications

Communications with PCs or PLCs are achieved via the RS485 serial communications link, enabling the C1300 to serve as the front end of plant-wide data acquisition systems. Using Modbus RTU protocol all process inputs and other variables can be read continuously by a host PC running any of a wide range of standard SCADA packages.

...C1300

4-Pen recording

Available with up to four trending pens, the C1300 enables pen ranges to be configured independently from each other and their corresponding inputs. This enables the pens to be scaled to the best effect and potentially minimizes the requirement for costly multiple-scaled consumables. The C1300 also offers a true-time event-pen facility that ensures that process actions are logged on the same timeline as Pen 1.

4-pen recorder with two graphical display panels

Designed to survive

Optional NEMA 4X protection ensures the C1300 can survive in the harshest environments and makes the recorder ideal for use in panels that are hosed down regularly. The tough, acid-resistant case provides NEMA 4X rating for all mounting options.

Easy to install

A choice of mounting options enables simple installation of the recorder in a panel, on a wall or on a pipe. Detachable terminal blocks provide trouble-free connection of input and output wiring. Mains isolation can be provided by an optional power switch within the instrument.

Summary

- 1, 2, 3 or 4 pens
- 10 in. or 105mm chart size
- Standard I/O with each pen includes:
 - analog input, analog output, transmitter power supply, relay output and 2 digital inputs

Specification

Construction

Size (H x W x D)

386.8 x 382.0 x 135 mm (15.23 x 15.04 x 5.57 in.)

Weight

8.2 kg (18 lb)

Case material

Glass fiber-filled reinforced polyester

Window material

Polycarbonate or glass

Door latch

High-compression with optional lock

Environmental

Operational temperature range

0 to 55 °C (32 to 130 °F)

Operational humidity range

- 5 to 95%RH (non-condensing)
- 5 to 80%RH (chart only)

Case sealing

- NEMA 3 (IP54)
- NEMA 4X (IP66) (optional)

Installation

Mounting options

Panel, wall or pipe

Terminal type

Screw

Wire size (max)

14 AWG (I/O), 12 AWG (power)

Operation and configuration

Programming method

Via front panel keys
