

Doppler Flow Meter

UFX Hand-Held Battery-Powered Meter

DESCRIPTION

The UFX Doppler Flow Meters feature ultrasonic measuring technology, providing accurate and reliable flow velocity readings for aerated liquids and liquids with suspended particles.

The UFX flow meter is a cost-effective, portable flow measurement system for closed full pipes size 1/4 in. (6 mm) and above.

OPERATION

The UFX flow meter uses two piezoelectric crystals contained within one transducer to transmit ultrasonic energy into the fluid stream and receive reflected energy off discontinuities, suspended particles or entrained gases, within the moving liquid. When the fluid is flowing in the pipe (with the discontinuities traveling at the same speed), there will be a shift in frequency from the transmitted ultrasound wave to the received ultrasound wave. The difference between these ultrasound wave frequencies is the Doppler frequency shift and is proportional to fluid velocity.
