Brief Operating Instructions
Proline Promag D 400

Electromagnetic flowmeter

These Instructions are Brief Operating Instructions; they are not a substitute for the Operating Instructions pertaining to the device.

Detailed information about the device can be found in the Operating Instructions and the other documentation:
- On the CD-ROM supplied (not included in the delivery for all device versions).
- Available for all device versions via:
  - Internet: www.endress.com/deviceviewer
  - Smart phone/tablet: Endress+Hauser Operations App

2 Basic safety instructions

2.1 Requirements for the personnel

The personnel must fulfill the following requirements for its tasks:
▶ Trained, qualified specialists must have a relevant qualification for this specific function and task
▶ Are authorized by the plant owner/operator
▶ Are familiar with federal/national regulations
▶ Before beginning work, the specialist staff must have read and understood the instructions in the Operating Instructions and supplementary documentation as well as in the certificates (depending on the application)
▶ Following instructions and basic conditions
2.2 Designated use

Application and media
The measuring device described in these Instructions is intended only for flow measurement of liquids with a minimum conductivity of 5 μS/cm.

Depending on the version ordered, the measuring device can also measure potentially explosive, flammable, poisonous and oxidizing media.

Measuring devices for use in hazardous areas, in hygienic applications or in applications where there is an increased risk due to process pressure, are labeled accordingly on the nameplate.

To ensure that the measuring device remains in proper condition for the operation time:

- Only use the measuring device in full compliance with the data on the nameplate and the general conditions listed in the Operating Instructions and supplementary documentation.
- Based on the nameplate, check whether the ordered device is permitted for the intended use in the hazardous area (e.g. explosion protection, pressure vessel safety).
- Use the measuring device only for media against which the process-wetted materials are adequately resistant.
- If the measuring device is not operated at atmospheric temperature, compliance with the relevant basic conditions specified in the associated device documentation is absolutely essential.

Incorrect use
Non-designated use can compromise safety. The manufacturer is not liable for damage caused by improper or non-designated use.

⚠️ WARNING

Danger of breakage of the sensor due to corrosive or abrasive fluids!
- Verify the compatibility of the process fluid with the sensor material.
- Ensure the resistance of all fluid-wetted materials in the process.
- Observe the specified pressure and temperature range.

Verification for borderline cases:
- For special fluids and fluids for cleaning, Endress+Hauser is glad to provide assistance in verifying the corrosion resistance of fluid-wetted materials, but does not accept any warranty or liability as minute changes in the temperature, concentration or level of contamination in the process can alter the corrosion resistance properties.

Residual risks
The external surface temperature of the housing can increase by max. 10 K due to the power consumption of the electronic components. Hot process fluids passing through the measuring device will further increase the surface temperature of the housing. The surface of the sensor, in particular, can reach temperatures which are close to the fluid temperature.

Possible burn hazard due to fluid temperatures!
- For elevated fluid temperature, ensure protection against contact to prevent burns.
2.3  Workplace safety
For work on and with the device:
‣ Wear the required personal protective equipment according to federal/national regulations.

For welding work on the piping:
‣ Do not ground the welding unit via the measuring device.

If working on and with the device with wet hands:
‣ It is recommended to wear gloves on account of the higher risk of electric shock.

2.4  Operational safety
Risk of injury.
‣ Operate the device in proper technical condition and fail-safe condition only.
‣ The operator is responsible for interference-free operation of the device.

Environmental requirements
If a plastic transmitter housing is permanently exposed to certain steam and air mixtures, this can damage the housing.
‣ If you are unsure, please contact your Endress+Hauser Sales Center for clarification.
‣ If used in an approval-related area, observe the information on the nameplate.

2.5  Product safety
This measuring device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate.

It meets general safety standards and legal requirements. It also complies with the EC directives listed in the device-specific EC Declaration of Conformity. Endress+Hauser confirms this by affixing the CE mark to the device.

2.6  IT security
We only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings.

IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.

3  Product description
The device consists of a transmitter and a sensor.
Two device versions are available:
- Compact version - the transmitter and sensor form a mechanical unit.
- Remote version - the transmitter and sensor are mounted separately from one another.

For detailed information on the product description, see the Operating Instructions for the device.

4 Incoming acceptance and product identification

4.1 Incoming acceptance

Are the order codes on the delivery note (1) and the product sticker (2) identical?

Are the goods undamaged?
Do the nameplate data match the ordering information on the delivery note?

Is the CD-ROM with the Technical Documentation (depends on device version) and documents present?

- If one of the conditions is not satisfied, contact your Endress+Hauser Sales Center.
- Depending on the device version, the CD-ROM might not be part of the delivery! The Technical Documentation is available via the Internet or via the Endress+Hauser Operations App.

### 4.2 Product identification

The following options are available for identification of the measuring device:

- **Nameplate specifications**
- **Order code with breakdown of the device features on the delivery note**
- **Enter serial numbers from nameplates in W@M Device Viewer (www.endress.com/deviceviewer):** All information about the measuring device is displayed.
- **Enter the serial number from the nameplates into the Endress+Hauser Operations App or scan the 2-D matrix code (QR code) on the nameplate with the Endress+Hauser Operations App:** all the information for the measuring device is displayed.

![Example of a nameplate](A0021952)

1. **Order code**
2. **Serial number (Ser. no.)**
3. **Extended order code (Ext. ord. cd.)**
4. **2-D matrix code (QR code)**

For detailed information on the breakdown of the specifications on the nameplate, see the Operating Instructions for the device.
5 Storage and transport

5.1 Storage conditions
Observe the following notes for storage:
• Store in original packaging.
• Do not remove protective covers or protective caps installed on process connections.
• Protect from direct sunlight.
• Select a storage location where moisture cannot collect in the measuring device.
• Store in a dry and dust-free place.
• Do not store outdoors.
• Storage temperature → 12

5.2 Transporting the product
Transport the measuring device to the measuring point in the original packaging.

Do not remove protective covers or caps installed on process connections. They prevent mechanical damage to the sealing surfaces and contamination in the measuring tube.

5.2.1 Measuring devices without lifting lugs

WARNING
Center of gravity of the measuring device is higher than the suspension points of the webbing slings.
Risk of injury if the measuring device slips.
▶ Secure the measuring device against slipping or turning.
▶ Observe the weight specified on the packaging (stick-on label).
5.2.2 Measuring devices with lifting lugs

**CAUTION**

Special transportation instructions for devices with lifting lugs
- Only use the lifting lugs fitted on the device or flanges to transport the device.
- The device must always be secured at two lifting lugs at least.

5.2.3 Transporting with a fork lift

If transporting in wood crates, the floor structure enables the crates to be lifted lengthwise or at both sides using a forklift.

**CAUTION**

Risk of damaging the magnetic coil
- If transporting by forklift, do not lift the sensor by the metal casing.
- This would buckle the casing and damage the internal magnetic coils.
6 Installation

6.1 Installation conditions

6.1.1 Mounting position

Mounting location

h ≥ 2 × DN

Installation in down pipes

Install a siphon with a vent valve downstream of the sensor in down pipes whose length h ≥ 5 m (16.4 ft). This precaution is to avoid low pressure and the consequent risk of damage to the measuring tube. This measure also prevents the system losing prime.

Installation in a down pipe

1 Vent valve
2 Pipe siphon
h Length of down pipe
Installation in partially filled pipes
A partially filled pipe with a gradient necessitates a drain-type configuration.

Orientation
The direction of the arrow on the sensor nameplate helps you to install the sensor according to the flow direction.
An optimum orientation position helps avoid gas and air accumulations and deposits in the measuring tube.

Vertical
Optimum for self-emptying pipe systems.
Horizontal

1. Measuring electrodes for signal detection

The measuring electrode plane must be horizontal. This prevents brief insulation of the two measuring electrodes by entrained air bubbles.

Inlet and outlet runs

For the dimensions and installation lengths of the device, see the "Technical Information" document, "Mechanical construction" section

6.1.2 Requirements from environment and process

Ambient temperature range

For detailed information on the ambient temperature range, see the Operating Instructions for the device.

If operating outdoors:
- Install the measuring device in a shady location.
- Avoid direct sunlight, particularly in warm climatic regions.
- Avoid direct exposure to weather conditions.
- Protect the display against impact.
- Protect the display from abrasion by sand in desert areas.

A display protector can be ordered from Endress+Hauser: "Accessories" section
System pressure

Furthermore, install pulse dampers if reciprocating, diaphragm or peristaltic pumps are used.

Vibrations
It is recommended to mount the sensor and transmitter separately.

3 Measures to avoid device vibrations ($L > 10 \text{ m (33 ft)}$)
6.1.3 Special mounting instructions

Display protection

▸ To ensure that the optional display protection can be easily opened, maintain the following minimum head clearance: 350 mm (13.8 in)

6.2 Mounting the measuring device

6.2.1 Required tools

For transmitter

- Torque wrench
- For wall mounting:
  - Open-ended wrench for hexagonal screw max. M5
- For pipe mounting:
  - Open-ended wrench AF 8
  - Phillips head screwdriver PH 2
- For turning the transmitter housing (compact version):
  - Phillips head screwdriver PH 2
  - Torx screwdriver TX 20
  - Open-ended wrench AF 7
For sensor

For flanges and other process connections:
- Screws, nuts, seals etc. are not included in the scope of supply and must be provided by the customer.
- Appropriate mounting tools

6.2.2 Preparing the measuring device

1. Remove all remaining transport packaging.
2. Remove any protective covers or protective caps present from the sensor.
3. Remove stick-on label on the electronics compartment cover.

6.2.3 Mounting the sensor

Mounting kit

The sensor is installed between the pipe flanges using a mounting kit. The device is centered using the recesses on the sensor. Centering sleeves are also provided depending on the flange standard or the diameter of the pitch circle.

A mounting kit – consisting of mounting bolts, seals, nuts and washers – can be ordered separately (see "Accessories" section).
Arranging the mounting bolts and centering sleeves

The device is centered using recesses on the sensor. The arrangement of the mounting bolts and the use of the centering sleeves supplied depend on the nominal diameter, the flange standard and the diameter of the pitch circle.

1 = Mounting bolts with centering sleeves
2 = EN (DIN) flange: 4-hole → with centering sleeves
3 = EN (DIN) flange: 8-hole → without centering sleeves

**Mounting the seals**

⚠️ **CAUTION**

An electrically conductive layer could form on the inside of the measuring tube!
Risk of measuring signal short circuit.
- Do not use electrically conductive sealing compounds such as graphite.

Comply with the following instructions when installing seals:
- Make sure that the seals do not protrude into the piping cross-section.
- For DIN flanges: only use seals according to DIN EN 1514-1.
- Use seals with a hardness rating of 70° Shore.

**Mounting the ground cable/ground disks**

Comply with the information on potential equalization and detailed mounting instructions for the use of ground cables/ground disks → 38.

**Screw tightening torques**

For detailed information on the screw tightening torques, see the "Mounting the sensor" section of the Operating Instructions for the device

6.2.4 **Mounting the transmitter of the remote version**

⚠️ **CAUTION**

Ambient temperature too high!
Danger of electronics overheating and housing deformation.
- Do not exceed the permitted maximum ambient temperature → 14.
- If operating outdoors: Avoid direct sunlight and exposure to weathering, particularly in warm climatic regions.
**CAUTION**

Excessive force can damage the housing!
- Avoid excessive mechanical stress.

### Wall mounting

![Wall mounting diagram](image)

**Engineering unit mm (in)**

### Post mounting

**WARNING**

Excessive tightening torque applied to the fixing screws on plastic housing!
Risk of damaging the plastic transmitter.
- Tighten the fixing screws as per the tightening torque: 2 Nm (1.5 lbf ft)
6 Engineering unit mm (in)

6.2.5 Turning the transmitter housing

1. 4 x TX 20
2. 
3. 
4. 

Endress+Hauser
Reassembling the transmitter housing

**WARNING**
Excessive tightening torque applied to the fixing screws!
Damage to the transmitter.
- When reassembling, tighten the fixing screws as per the tightening torque:

<table>
<thead>
<tr>
<th>Step (see graphics)</th>
<th>Fixing screw</th>
<th>Tightening torques for housing made of:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>

</tr>
<tr>
<td>10</td>
<td>Transmitter housing</td>
<td>5.5 Nm (4.1 lbf ft)</td>
</tr>
</tbody>
</table>

**NOTICE**
Plug of the smart sensor electronics module connected incorrectly!
No measuring signal is output.
- Plug in the plug of the smart sensor electronics module as per the coding.

**NOTICE**
Incorrect routing of the connecting cables between the sensor and transmitter in the transmitter housing!
This can interfere with the measuring signal.
- Route the connecting cables directly at the level of the plugs.
- Reverse the procedure to reassemble the measuring device.
6.2.6 Turning the display module

Reassembling the transmitter housing

⚠️ WARNING
Excessive tightening torque applied to the fixing screws!
Damage to the transmitter.

- When reassembling, tighten the fixing screws as per the tightening torque:

<table>

</tr>
</tbody>
</table>
7 Electrical connection

The measuring device does not have an internal circuit breaker. For this reason, assign the measuring device a switch or power-circuit breaker so that the power supply line can be easily disconnected from the mains.

7.1 Connection conditions

7.1.1 Required tools

• Torque wrench
• For cable entries: Use corresponding tools
• For housing cover: Torx screwdriver or flat-blade screwdriver
• Wire stripper
• When using stranded cables: crimping tool for ferrule

7.1.2 Requirements for connecting cable

The connecting cables provided by the customer must fulfill the following requirements.

Electrical safety

In accordance with applicable federal/national regulations.

Permitted temperature range

• \(-40 °C (\text{-}40 °F) \) to \(+80 °C (\text{+}176 °F)\)
• Minimum requirement: cable temperature range \(\geq\) ambient temperature \(+20\) K

Power supply cable

Standard installation cable is sufficient.

Signal cable

Current output

• For 0-20 mA and 4-20 mA: standard installation cable is sufficient.
• For 4-20 mA HART: Shielded cable recommended. Observe grounding concept of the plant.

Pulse/frequency/switch output

Standard installation cable is sufficient.

Status input

Standard installation cable is sufficient.

PROFIBUS DP

The IEC 61158 standard specifies two types of cable (A and B) for the bus line which can be used for every transmission rate. Cable type A is recommended.

For detailed information about the specification of the connecting cable, see the Operating Instructions for the device.
Modbus RS485
The EIA/TIA-485 standard specifies two types of cable (A and B) for the bus line which can be used for every transmission rate. Cable type A is recommended.

For detailed information about the specification of the connecting cable, see the Operating Instructions for the device.

EtherNet/IP
The standard ANSI/TIA/EIA-568-B.2 Annex specifies CAT 5 as the minimum category for a cable used for EtherNet/IP. CAT 5e and CAT 6 are recommended.

For more information on planning and installing EtherNet/IP networks, please refer to the "Media Planning and Installation Manual. EtherNet/IP" of the ODVA Organization.

Connecting cable for remote version
The remote version is connected via an electrode cable and a coil current cable.

For detailed information about the specification of the connecting cables, see the Operating Instructions for the device.

Operation in zones of severe electrical interference
Grounding is by means of the ground terminal provided for the purpose inside the connection housing. The stripped and twisted lengths of cable shield to the ground terminal must be as short as possible.

Cable diameter
- Cable glands supplied:
  - For standard cable: M20 × 1.5 with cable Ø6 to 12 mm (0.24 to 0.47 in)
  - For reinforced cable: M20 × 1.5 with cable Ø9.5 to 16 mm (0.37 to 0.63 in)
- (Plug-in) spring terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)

7.1.5 Shielding and grounding

Modbus
The shielding and grounding concept requires compliance with the following:
- Electromagnetic compatibility (EMC)
- Explosion protection
- Personal protection equipment
- National installation regulations and guidelines
- Observe cable specification → 26.
- Keep the stripped and twisted lengths of cable shield to the ground terminal as short as possible.
- Seamless cable shielding.

Grounding of the cable shield
To comply with EMC requirements:
- Ensure the cable shield is grounded to the potential matching line at multiple points.
- Connect every local ground terminal to the potential matching line.

NOTICE
In systems without potential matching, the multiple grounding of the cable shield causes mains frequency equalizing currents!
Damage to the bus cable shield.
- Only ground the bus cable shield to either the local ground or the protective ground at one end.

PROFIBUS DP
Optimum electromagnetic compatibility (EMC) of the fieldbus system can only be guaranteed if the system components and, in particular, the lines are shielded and the shield forms as complete a cover as possible. A shield coverage of 90% is ideal.
- To ensure an optimum EMC protective effect, connect the shield as often as possible to the reference ground.
- For reasons of explosion protection, you should refrain from grounding however.

To comply with both requirements, the fieldbus system allows three different types of shielding:
- Shielding at both ends.
- Shielding at one end on the feed side with capacitance termination at the field device.
- Shielding at one end on the feed side.

Experience shows that the best results with regard to EMC are achieved in most cases in installations with one-sided shielding on the feed side (without capacitance termination at the field device). Appropriate measures with regard to input wiring must be taken to allow unrestricted operation when EMC interference is present. These measures have been taken into account for this device. Operation in the event of disturbance variables as per NAMUR NE21 is thus guaranteed.

Where applicable, national installation regulations and guidelines must be observed during the installation!
Where there are large differences in potential between the individual grounding points, only one point of the shielding is connected directly with the reference ground. In systems without potential equalization, therefore, cable shielding of fieldbus systems should only be grounded on one side, for example at the fieldbus supply unit or at safety barriers.

**NOTICE**

*In systems without potential matching, the multiple grounding of the cable shield causes mains frequency equalizing currents!* 
Damage to the bus cable shield.

- Only ground the bus cable shield to either the local ground or the protective ground at one end. Insulate the shield that is not connected.

---

**7.1.6 Preparing the measuring device**

1. Remove dummy plug if present.
2. If measuring device is delivered with cable glands:
   Observe cable specification → 26.

7.1.7 Preparing the connecting cable for the remote version

When terminating the connecting cable, pay attention to the following points:
- In the case of electrode cables, make sure that the ferrules do not touch the core shields on the sensor side. Minimum distance = 1 mm (exception: green “GND” cable)
- In the case of coil current cables, insulate one core of the three-core wire at the level of the core reinforcement. You only require two cores for the connection.
- Fit the fine-wire cores with ferrules.

Transmitter

**A** = Termination of the cables  
**B** = Termination of the fine-wire cores with ferrules  
1 = Red ferrules, $\phi$1.0 mm (0.04 in)  
2 = White ferrules, $\phi$0.5 mm (0.02 in)  
* = Stripping only for reinforced cables

---

### 7.2 Connecting the measuring device

**WARNING**

**Risk of electric shock! Components carry dangerous voltages!**

- Have electrical connection work carried out by correspondingly trained specialists only.
- Observe applicable federal/national installation codes and regulations.
- Comply with local workplace safety regulations.
- Observe grounding concept of the plant.
- Never mount or wire the measuring device while it is connected to the supply voltage.
- Before the supply voltage is applied, connect the protective ground to the measuring device.
7.2.1 Connecting the remote version

**WARNING**

**Risk of damaging the electronic components!**

- Ground the remote version: connect the sensor and transmitter to the same potential equalization.
- Only connect the sensor to a transmitter with the same serial number.
- Ground the connection housing of the sensor via the external screw terminal.

The following procedure (in the action sequence given) is recommended for the remote version:

1. Mount the sensor and transmitter.
2. Connect the connecting cable.
3. Connect the transmitter.

10 Transmitter: main electronics module with terminals
11 Sensor: connection module

7.2.2 Connecting the transmitter

⚠️ WARNING
Housing degree of protection may be voided due to insufficient sealing of the housing.

- Screw in the screw without using any lubricant. The threads on the cover are coated with a dry lubricant.

Tightening torques for plastic housing

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
Supply voltage connection, 0-20 mA/4-20 mA HART and additional outputs/inputs

- Connect the cable in accordance with the terminal assignment → 28. For supply voltage: open the shock protection cover.

For HART communication: When connecting the cable shielding to the ground terminal, observe the grounding concept of the facility.
Connecting the supply voltage and PROFIBUS DP

- Connect the cable in accordance with the terminal assignment → 📚 28. For supply voltage: open the shock protection cover.
Connecting the supply voltage and EtherNet/IP

- Connect the cable in accordance with the terminal assignment →  28. For supply voltage: open the shock protection cover.

7.2.3 Ensuring potential equalization

⚠️ CAUTION

Electrode damage can result in the complete failure of the device!
- Make sure that the fluid and sensor have the same electrical potential.
- Pay attention to internal grounding concepts in the company.
- Pay attention to the pipe material or grounding.

Connection examples for standard situations

Metal, grounded pipe

This connection method also applies:
- For plastic pipes
- For pipes with insulating liner
Connection example in special situations

For detailed information on special cases, see the Operating Instructions for the device.
- Unlined and ungrounded metal pipe
- Plastic pipe or pipe with insulating liner
- Pipe with a cathodic protection unit

7.3 Hardware settings

7.3.1 Setting the device address

EtherNet/IP

The IP address of the measuring device can be configured for the network via DIP switches.

Addressing data

<table>
<thead>
<tr>
<th>IP address and configuration options</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st octet</td>
</tr>
<tr>
<td>192.</td>
</tr>
</tbody>
</table>

↓

- Can only be configured via software addressing
- Can be configured via software addressing and hardware addressing

<table>
<thead>
<tr>
<th>IP address range</th>
<th>1 to 254 (4th octet)</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP address broadcast</td>
<td>255</td>
</tr>
<tr>
<td>Addressing mode ex works</td>
<td>Software addressing: all DIP switches for hardware addressing are set to OFF.</td>
</tr>
<tr>
<td>IP address ex works</td>
<td>DHCP server active</td>
</tr>
</tbody>
</table>

For device addressing via software → 56
Setting the address

▶ Set the desired IP address using the corresponding DIP switches on the I/O electronics module.
- Hardware addressing with the configured IP address is enabled after 10 s.

PROFIBUS DP
The address must always be configured for a PROFIBUS DP/PA device. The valid address range is between 1 and 126. In a PROFIBUS DP/PA network, each address can only be assigned once. If an address is not configured correctly, the device is not recognized by the master. All measuring devices are delivered from the factory with the device address 126 and with the software addressing method.

Setting the address

12  Addressing using DIP switches on the I/O electronics module

1. Disable software addressing (OFF) via the top DIP switch 4 (SW).
2. Set the desired device address via the corresponding DIP switches.
   ✏️ Example → 12, 40: 1 + 16 + 32 = device address 49
   The device demands rebooting after 10 s. After rebooting, hardware addressing is enabled with the configured IP address.

7.3.2 Enabling the terminating resistor

PROFIBUS DP
To avoid incorrect communication transmission caused by impedance mismatch, terminate the PROFIBUS DP cable correctly at the start and end of the bus segment.

- If the device is operated with a baud rate of 1.5 MBaud and under:
  For the last transmitter on the bus, terminate via DIP switch 2 (bus termination) and DIP switch 1 and 3 (bus polarization). Setting: ON – ON – ON → 13, 41.
- For baud rates > 1.5 MBaud:
  Due to the capacitance load of the user and the line reflections generated as a result, ensure that an external bus terminator is used.

It is generally advisable to use an external bus terminator as the entire segment can fail if a device that is terminated internally is defective.

Modbus RS485
To avoid incorrect communication transmission caused by impedance mismatch, terminate the Modbus RS485 cable correctly at the start and end of the bus segment.
### 7.4 Ensuring the degree of protection

#### 7.4.1 Degree of protection IP66/67, Type 4X enclosure

The measuring device fulfills all the requirements for the IP66/67 degree of protection, Type 4X enclosure.

To guarantee IP66/67 degree of protection, Type 4X enclosure, carry out the following steps after the electrical connection:

1. Check that the housing seals are clean and fitted correctly. Dry, clean or replace the seals if necessary.
2. Tighten all housing screws and screw covers.
3. Firmly tighten the cable glands.
4. To ensure that moisture does not enter the cable entry, route the cable so that it loops down before the cable entry ("water trap").
5. Insert dummy plugs into unused cable entries.

### 7.5 Post-connection check

<table>
<thead>
<tr>
<th>Question</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Are cables or the device undamaged (visual inspection)?</td>
<td>☐</td>
</tr>
<tr>
<td>Do the cables comply with the requirements → 26?</td>
<td>☐</td>
</tr>
</tbody>
</table>
Do the cables have adequate strain relief?  

Are all the cable glands installed, firmly tightened and leak-tight? Cable run with 'water trap' → 42?  

Only for remote version: is the sensor connected to the right transmitter? Check the serial number on the nameplate of the sensor and transmitter.  

Does the supply voltage match the specifications on the transmitter nameplate?  

Is the terminal assignment correct?  

If supply voltage is present, do values appear on the display module?  

Is the potential equalization established correctly → 38?  

Are all housing covers installed and the screws tightened with the correct tightening torque?  

---

8 Operation options

8.1 Structure and function of the operating menu

8.1.1 Structure of the operating menu

![Schematic structure of the operating menu]

8.1.2 Operating philosophy

The individual parts of the operating menu are assigned to certain user roles (operator, maintenance etc.). Each user role contains typical tasks within the device lifecycle.

For detailed information on the operating philosophy, see the Operating Instructions for the device.
8.2 Access to the operating menu via the local display

1. Operational display with measured value shown as "1 value, max." (example)
   1.1 Device tag
   1.2 Display area for measured values (4-line)
   1.3 Explanatory symbols for measured value: Measured value type, measuring channel number, symbol for diagnostic behavior
   1.4 Status area
   1.5 Measured value
   1.6 Unit for the measured value
   1.7 Operating elements
2. Operational display with measured value shown as "1 bar graph + 1 value" (example)
   2.1 Bar graph display for measured value 1
   2.2 Measured value 1 with unit
   2.3 Explanatory symbols for measured value 1: measured value type, measuring channel number
   2.4 Measured value 2
   2.5 Unit for measured value 2
   2.6 Explanatory symbols for measured value 2: measured value type, measuring channel number
3. Navigation view: picklist of a parameter
   3.1 Navigation path and status area
   3.2 Display area for navigation: ✔ designates the current parameter value
4. Editing view: text editor with input mask
5. Editing view: numeric editor with input mask
8.2.1 Operational display

Status area
The following symbols appear in the status area of the operational display at the top right:

- Status signals
  - F: Failure
  - C: Function check
  - S: Out of specification
  - M: Maintenance required
- Diagnostic behavior
  - ☒: Alarm
  - Δ: Warning
- 🔒: Locking (the device is locked via the hardware)
- ↔: Communication (communication via remote operation is active)

Display area

- Measured variables (depending on the device version), e.g.:
  - \( \dot{V} \): Volume flow
  - \( \dot{m} \): Mass flow
  - \( \rho \): Density
  - G: Conductivity
  - \( \Theta \): Temperature
- \( \sum \): Totalizer (the measurement channel number indicates which totalizer is displayed)
- \( \circ \): Output (the measurement channel number indicates which output is displayed)
- \( \leftarrow \): Input
- \( 1 \), \( 2 \): Measurement channel number (if more than one channel is present for the same measured variable type)
- Diagnostic behavior (for a diagnostic event that concerns the displayed measured variable)
  - ☒: Alarm
  - Δ: Warning

8.2.2 Navigation view

Status area
The following appears in the status area of the navigation view in the top right corner:

- Of the submenu
  - The direct access code for the parameter you are navigating to (e.g. 0022-1)
  - If a diagnostic event is present, the diagnostic behavior and status signal
- In the wizard
  If a diagnostic event is present, the diagnostic behavior and status signal
**Display area**

- Icons for menus
  - 🥇: Operation
  - 🔄: Setup
  - 📋: Diagnostics
  - 🧑‍💻: Expert
- ➡: Submenus
- ℹ️: Wizards
- 🏛: Parameters within a wizard
- 🍀: Parameter locked

8.2.5 Further information

For further information on the following topics, see the Operating Instructions for the device:

- Calling up help text
- User roles and related access authorization
- Disabling write protection via access code
- Enabling and disabling the keypad lock

8.3 Access to the operating menu via the Web browser

8.3.1 Function range

Thanks to the integrated Web server the device can be operated and configured via a Web browser. The operating menu structure is the same as in the local display.

8.3.2 Prerequisites

Hardware

<table>
<thead>
<tr>
<th>Connecting cable</th>
<th>Standard Ethernet cable with RJ45 connector</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer</td>
<td>RJ45 interface</td>
</tr>
<tr>
<td>Measuring device:</td>
<td>Web server must be enabled; factory setting: ON</td>
</tr>
<tr>
<td>IP address</td>
<td>If the IP address of the device is not known:</td>
</tr>
</tbody>
</table>
|                  | - The IP address can be read out via local operation:
|                  |   'Diagnostics' menu → Device information → IP address |
|                  | - Communication with the Web server can be established via the standard IP address 192.168.1.212. |
|                  | The DHCP function is enabled in the device at the factory, i.e. the device expects an IP address to be assigned by the network. This function can be disabled and the device can be set to the standard IP address 192.168.1.212: set top DIP switch No. 2 from OFF → ON. |

- Once the DIP switch has been activated, the device must be restarted before the device uses the standard IP address.
- If the standard IP address (top DIP switch No. 2 = ON) is used, there is no connection to the EtherNet/IP network.
Software of the computer

| Web browsers supported                          | • Microsoft Internet Explorer (min. 8.x)  
|                                                | • Mozilla Firefox  
|                                                | • Google chrome |
| Recommended operating systems                  | • Windows XP

| User rights for TCP/IP settings                | User rights required for TCP/IP settings (e.g. for changes to IP address, subnet mask) |
| Computer configuration                         | • JavaScript is enabled  
|                                                | • If JavaScript cannot be enabled, enter http://192.168.1.212/basic.html in the address line of the Web browser. A fully functional but simplified version of the operating menu structure starts in the Web browser. |

8.3.3 Establishing a connection

Configuring the Internet protocol of the computer

<table>
<thead>
<tr>
<th>IP address</th>
<th>192.168.1.XXX; for XXX all numerical values except: 0, 212 and 255 → e.g. 192.168.1.213</th>
</tr>
</thead>
<tbody>
<tr>
<td>Subnet mask</td>
<td>255.255.255.0</td>
</tr>
<tr>
<td>Default gateway</td>
<td>192.168.1.212 or leave cells empty</td>
</tr>
</tbody>
</table>

1. Switch on the measuring device and connect to the computer via the cable.
2. If a 2nd network card is not used: all the applications on the notebook should be closed, or all the applications that require the Internet or network, such as e-mail, SAP applications, Internet or Windows Explorer, i.e. close all open Internet browsers.
3. Configure the properties of the Internet protocol (TCP/IP) as defined in the table above.

Starting the Web browser

1. Enter the IP address of the Web server in the address line of the Web browser: 192.168.1.212
2. If the IP address of the measuring device is known, enter the defined device address in the address line of the Web browser. If it is unknown, read the IP address via local operation ("Diagnostics" menu → Device information → IP address) or set the upper DIP switch No. 2 to ON, restart the device and enter the standard IP address 192.168.1.212 → 48.

The login page appears.
### 8.3.4 Logging on

**Access code**  
0000 (factory setting); can be changed by customer

Defined order of modules

The modules are permanently assigned to the slots, i.e. when configuring the modules, the order and the arrangement of the modules must be respected.

<table>
<thead>
<tr>
<th>Slot</th>

<tr>
<td>11…12</td>
<td>DO (Discrete Output block 1 to 2)</td>
<td>Discrete Output block 1 to 2</td>
</tr>
</tbody>
</table>

To optimize the data throughput rate of the PROFIBUS network, it is advisable to only configure modules that are processed in the PROFIBUS master system. Any resulting gaps between the configured modules must be assigned to the EMPTY_MODULE.
9.1.2 Description of the modules

The data structure is described from the perspective of the PROFIBUS master:
- Input data: Are sent from the measuring device to the PROFIBUS master.
- Output data: Are sent from the PROFIBUS master to the measuring device.

AI module (Analog Input)
Transmit an input variable from the measuring device to the PROFIBUS master (Class 1).

Selection: input variable
The input variable can be specified using the CHANNEL parameter.

<table>
<thead>
<tr>
<th>CHANNEL</th>
<th>Input variable</th>
<th>CHANNEL</th>
<th>Input variable</th>
</tr>
</thead>
<tbody>
<tr>
<td>33122</td>
<td>Volume flow</td>
<td>1132</td>
<td>Conductivity</td>
</tr>
<tr>
<td>32961</td>
<td>Mass flow</td>
<td>1042</td>
<td>Electronics temperature</td>
</tr>
<tr>
<td>708</td>
<td>Flow velocity</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Factory setting

<table>
<thead>
<tr>
<th>Function block</th>
<th>Factory setting</th>
<th>Function block</th>
<th>Factory setting</th>

</thead>
<tbody>
<tr>
<td>AI 1</td>
<td>Volume flow</td>
<td>AI 3</td>
<td>Electronics temperature</td>
</tr>
<tr>
<td>AI 2</td>
<td>Mass flow</td>
<td>AI 4</td>
<td>Flow velocity</td>
</tr>
</tbody>
</table>

TOTAL module
Transmit a totalizer value from the measuring device to the PROFIBUS master (Class 1).

Selection: totalizer value
The totalizer value can be specified using the CHANNEL parameter.

<table>
<thead>
<tr>
<th>CHANNEL</th>
<th>Input variable</th>
</tr>
</thead>
<tbody>
<tr>
<td>33122</td>
<td>Volume flow</td>
</tr>
<tr>
<td>32961</td>
<td>Mass flow</td>
</tr>
</tbody>
</table>

Factory setting

<table>
<thead>
<tr>
<th>Function block</th>
<th>Factory setting: TOTAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>Totalizer 1, 2 and 3</td>
<td>Volume flow</td>
</tr>
</tbody>
</table>

SETTOT_TOTAl module
The module combination consists of the SETTOT and TOTAL functions:
- SETTOT: Control the totalizers via the PROFIBUS master.
- TOTAL: Transmit the totalizer value along with the status to the PROFIBUS master.
**Selection: control totalizer**

<table>
<thead>
<tr>
<th>CHANNEL</th>
<th>Value SETTOT</th>
<th>Control totalizer</th>
</tr>
</thead>
<tbody>
<tr>
<td>33310</td>
<td>0</td>
<td>Totalize</td>
</tr>
<tr>
<td>33046</td>
<td>1</td>
<td>Resetting</td>
</tr>
<tr>
<td>33308</td>
<td>2</td>
<td>Adopt totalizer initial setting</td>
</tr>
</tbody>
</table>

**Factory setting**

<table>
<thead>
<tr>
<th>Function block</th>
<th>Factory setting: Value SETTOT (meaning)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Totalizer 1, 2 and 3</td>
<td>0 (totalizing)</td>
</tr>
</tbody>
</table>

**SETTOT_MODETOT_TOTAL module**

The module combination consists of the SETTOT, MODETOT and TOTAL functions:
- **SETTOT**: Control the totalizers via the PROFIBUS master.
- **MODETOT**: Configure the totalizers via the PROFIBUS master.
- **TOTAL**: Transmit the totalizer value along with the status to the PROFIBUS master.

**Selection: totalizer configuration**

<table>
<thead>
<tr>
<th>CHANNEL</th>
<th>MODETOT value</th>
<th>Totalizer configuration</th>
</tr>
</thead>
<tbody>
<tr>
<td>33306</td>
<td>0</td>
<td>Balancing</td>
</tr>
<tr>
<td>33028</td>
<td>1</td>
<td>Balance the positive flow</td>
</tr>
<tr>
<td>32976</td>
<td>2</td>
<td>Balance the negative flow</td>
</tr>
<tr>
<td>32928</td>
<td>3</td>
<td>Stop totalizing</td>
</tr>
</tbody>
</table>

**Factory setting**

<table>
<thead>
<tr>
<th>Function block</th>
<th>Factory setting: Value MODETOT (meaning)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Totalizer 1, 2 and 3</td>
<td>0 (balancing)</td>
</tr>
</tbody>
</table>

**AO module (Analog Output)**

Transmit a compensation value from the PROFIBUS master (Class 1) to the measuring device.
Assigned compensation values
A compensation value is permanently assigned to the individual Analog Output blocks.

<table>
<thead>
<tr>
<th>CHANNEL</th>
<th>Function block</th>
<th>Compensation value</th>
</tr>
</thead>
<tbody>
<tr>
<td>731</td>
<td>AO 1</td>
<td>External density</td>
</tr>
</tbody>
</table>

The selection is made via: "Expert" menu → Sensor → External compensation

DI module (Discrete Input)
Transmit discrete input values from the measuring device to the PROFIBUS master (Class 1).

Selection: device function
The device function can be specified using the CHANNEL parameter.

<table>
<thead>
<tr>
<th>CHANNEL</th>
<th>Device function</th>
<th>Factory setting: state (meaning)</th>
</tr>
</thead>
<tbody>
<tr>
<td>894</td>
<td>Empty pipe detection</td>
<td></td>
</tr>
<tr>
<td>895</td>
<td>Low flow cut off</td>
<td></td>
</tr>
<tr>
<td>1430</td>
<td>Status verification ¹</td>
<td></td>
</tr>
</tbody>
</table>

¹) Only available with the 'Heartbeat Verification' application package

Factory setting

<table>
<thead>
<tr>
<th>Function block</th>
<th>Factory setting</th>
<th>Function block</th>
<th>Factory setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>DI 1</td>
<td>Empty pipe detection</td>
<td>DI 2</td>
<td>Low flow cut off</td>
</tr>
</tbody>
</table>

DO module (Discrete Output)
Transmit discrete output values from the PROFIBUS master (Class 1) to the measuring device.

Assigned device functions
A device function is permanently assigned to the individual Discrete Output blocks.

<table>
<thead>
<tr>
<th>CHANNEL</th>
<th>Function block</th>
<th>Device function</th>
<th>Values: control (meaning)</th>
</tr>
</thead>
<tbody>
<tr>
<td>891</td>
<td>DO 1</td>
<td>Flow override</td>
<td></td>
</tr>
<tr>
<td>1429</td>
<td>DO 2</td>
<td>Start verification ¹</td>
<td>0 (disable device function)</td>
</tr>
</tbody>
</table>

¹) Only available with the 'Heartbeat Verification' application package

EMPTY_MODULE module
This module is used to assign empty spaces arising from modules not being used in the slots → 52.
10 Commissioning

10.1 Function check
Before commissioning the device, make sure that the post-installation and post-connection checks have been performed.

- "Post-installation check" checklist → 24
- "Post-connection check" checklist → 42

10.2 Switching on the measuring device
After a successful function check, switch on the measuring device.

After a successful startup, the local display switches automatically from the startup display to the operational display.

If nothing appears on the local display or a diagnostic message is displayed, refer to the Operating Instructions for the device

10.3 Configuring the device address via software
In the "Communication" submenu the device address can be set.

Navigation
"Setup" menu → Communication → Device address

10.3.1 Ethernet network and Web server
When delivered, the measuring device has the following factory settings:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>IP address</td>
<td>192.168.1.212</td>
</tr>
<tr>
<td>Subnet mask</td>
<td>255.255.255.0</td>
</tr>
<tr>
<td>Default gateway</td>
<td>192.168.1.212</td>
</tr>
</tbody>
</table>

- If hardware addressing is active, software addressing is disabled.
- If a switch is made to hardware addressing, the address configured via software addressing is retained for the first 9 places (the first three octets).
- If the IP address of the device is not known, the device address currently configured can be read out: Operating Instructions for the device

10.3.2 PROFIBUS network
At time of delivery, the measuring device has the following factory setting:

| Device address | 126 |

- If hardware addressing is active, software addressing is blocked → 39
10.4 Setting the operating language

Factory setting: English or ordered local language

10.5 Configuring the measuring device

The Setup menu and its guided wizards enable fast commissioning of the measuring device. The wizards systematically guide the user through all the parameters required for configuration, such as parameters for measurement or outputs.

The wizards available in the particular device can vary on account of the device version (e.g. communication method).

<table>
<thead>
<tr>
<th>Wizard</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Status input</td>
<td>Configure the status input</td>
</tr>
<tr>
<td>Current output</td>
<td>Configure the current output</td>
</tr>
<tr>
<td>Pulse/frequency/switch output</td>
<td>Configure the pulse/frequency/switch output</td>
</tr>
<tr>
<td>Display</td>
<td>Configure the measured value display</td>
</tr>
</tbody>
</table>
### 10.6 Protecting settings from unauthorized access

The following options exist for protecting the configuration of the measuring device from unintentional modification after commissioning:

- Write protection via access code for the local display and Web browser
- Write protection via write protection switch
- Write protection via keypad lock

For detailed information on protecting the settings against unauthorized access, see the Operating Instructions for the device.

### 11 Diagnostic information

Faults detected by the self-monitoring system of the measuring device are displayed as a diagnostic message in alternation with the operational display. The message on remedial measures can be called up from the diagnostic messages, and contains important information on the fault.
17 Message for remedial measures

1 Diagnostic information
2 Short text
3 Service ID
4 Diagnostic behavior with diagnostic code
5 Operation time of occurrence
6 Remedial measures

The user is in the diagnostic message.

1. Press \( \text{①} \) (① symbol).
   \( \rightarrow \) The Diagnostic list submenu opens.

2. Select the desired diagnostic event with \( \text{③} \) or \( \text{④} \) and press \( \text{⑤} \).
   \( \rightarrow \) The message for the remedial measures for the selected diagnostic event opens.

3. Press \( \text{③} + \text{④} \) simultaneously.
   \( \rightarrow \) The message for the remedial measures closes.
