

PACMotion™ VFD

Flexible AC Drive Solution

Key Benefits

- Standard PROFINET integration and built-in auto-tuning feature make setup and commissioning new drives quick and easy
- High-performance drives support up to 200% overcurrent and 200% starting torque allowing smaller drives to be utilized reliably for applications with variable loads
- Conformally coated electronics and available IP55 and IP66 enclosures allow drives to be mounted without a control cabinet
- Built-in safe torque off (STO) support saves development and commissioning time by allowing integrated safety and standard applications

Flexibility to Meet Your Needs

Emerson's PACMotion VFDs are integrated, rugged and modular AC variable frequency drives designed for a range of industries, including water/wastewater, metro, automotive, mining, food and beverage, packaging, oil and gas, discrete manufacturing and modular machine designs.

PACMotion VFDs seamlessly integrate with Emerson's PAC, PLC and Edge Controllers. Leveraging the total system architecture provides continuous feedback that can improve your process and profitability.

The flexible design offers power ranges from 0.75 to 250kW (1 to 350HP) for input voltages from 200 to 600 volts. Options, such as braking resistors, external keypads, encoder option cards, as well as multiple communications protocols, let you customize PACMotion VFDs to your specific application requirements.

Fully Integrated for System Simplicity

PACMotion VFDs easily and seamlessly integrate with PACSystems RX3i applications for quick and cost-effective installation. With drive configuration tools incorporated directly within PAC Machine Edition and a built-in auto-tuning feature for automatically adjusting the drive based on attached motors and loads, PACMotion VFDs offer plug-and-play startup and simplified programming.

Rugged Design for Demanding Applications

PACMotion VFDs are built to perform in harsh environments. Conformally coated circuit boards can withstand the most demanding environmental conditions. For applications with variable loading, PACMotion VFDs also provide a high current overload capacity: rated up to 150% for up to 60 seconds at a time and 200% for short durations. With operating temperatures up to 40°C for IP55 and IP66 enclosures and up to 50°C for IP20, PACMotion VFDs can meet your toughest challenges. Built-in support for Safe Torque Off (STO) allows PACMotion VFDs to integrate seamlessly into applications requiring safety as well.

Compact, Modular Design

The compact footprint of PACMotion VFDs minimize control cabinet space, or with IP55 or IP66 enclosures, you can skip the control cabinet entirely. The built-in keypad and display allow operators to validate parameters locally, providing instant feed-back during troubleshooting.

The modular design even allows multiple individual units to be connected and controlled with a single keypad.
