Warnings and Caution Notes as Used in this Publication

WARNING

Warning notices are used in this publication to emphasize that hazardous voltages, currents, temperatures, or other conditions that could cause personal injury exist in this equipment or may be associated with its use.

In situations where inattention could cause either personal injury or damage to equipment, a Warning notice is used.

ACAUTION

Caution notices are used where equipment might be damaged if care is not taken.

Note: Notes merely call attention to information that is especially significant to understanding and operating the equipment.

These instructions do not purport to cover all details or variations in equipment, nor to provide for every possible contingency to be met during installation, operation, and maintenance. The information is supplied for informational purposes only, and Emerson makes no warranty as to the accuracy of the information included herein. Changes, modifications, and/or improvements to equipment and specifications are made periodically and these changes may or may not be reflected herein. It is understood that Emerson may make changes, modifications, or improvements to the equipment referenced herein or to the document itself at any time. This document is intended for trained personnel familiar with the Emerson products referenced herein.

Emerson may have patents or pending patent applications covering subject matter in this document. The furnishing of this document does not provide any license whatsoever to any of these patents.

Emerson provides the following document and the information included therein as-is and without warranty of any kind, expressed or implied, including but not limited to any implied statutory warranty of merchantability or fitness for a particular purpose.

Section 1: Introduction

The RXi HMI is an operator interface ready for local and machine visualization needs. Powered by Movicon.NExT WebHMI software, the RXi HMI offers intuitive 2D and 3D graphics, multi-touch gesture support, and historical trending. It supports a wide variety of OT protocols, OPC UA and MQTT for remote connectivity, and supports HTML5 for remote visualization. The RXi HMI is industrial environment ready with ATEX, UL Hazloc, Marine, and IP66 certifications. Web HMI project files can be configured and deployed to the RXi HMI using the Movicon.NExT configuration tool which can be installed on a separate computer or laptop."

1.1 Movicon Development Help

This documents centers on configuration of the RXi HMI hardware. For help with the Movicon WebHMI development environment, please consult the Movicon User Manual listed in the following section.

2.2 RXi HMI Motherboard Specifications

Item	Description
Board Size	170mm x 113mm
	AMD® Embedded G-Series
CPU Support	AMD® GX-412GC, Quad-Core, 2M Cache, 1.2GHz, 15W
Manage Caract	4GB DDR3L (Soldered with ECC, -40°C ~ 85°C)
Memory Support	Supports Single Channel DDR3 1066/1333MHz
	AMD Radeon [™] R3E GPU
	DirectX® 11.2, OpenGL 4.3, OpenCL [™] 1.2 graphics support
Craphics	1 x DP++
Graphics	1 x LVDS
	DP++: resolution up to 4096x2160 @ 30Hz
	LVDS: dual channel 24-bit, resolution up to 1920x1200 @ 60Hz
BIOS	AMI SPI 64Mbit
Starage	1 x Micro SD
Storage	1 x SATA 3.0 (7+15pin)
Ethernet	2 x Intel® I210IT, -40 to 105°C PCIe (10/100/1000Mbps)
	2 x USB 3.0
	1 x RS-232
	1 x RS-485
Outside 1/0	1 x Line-out
Outside 1/0	1 x Mic-in
	2 x GbE (RJ-45)
	1 x DP++
	1 x Power Button
Internal I/O	1 x LVDS LCD Panel Connector
Internarijo	1 x AIO/DIO 1x30pin Connector (JAE TX24-30R-10ST-H1E)
Battery	CR2032 Coin Cell
Audio	Codec:92HD73C
[1 x Mini PCIe (PCIe/USB 2.0)
Expansion	1 x M.2 E key 2230 (PCIe/USB 2.0)
Security	TPM2.0
Match I an Theorem	System Reset
vvatchdog Timer	Programmable via Software from 1 to 255 Seconds/Minutes
	Operating: -30 to 85 °C
Temperature	Storage: -30 to 85 °C
	Operating: 10 to 90% RH
Humiaity	Storage: 10 to 90% RH
OS Support	Windows 10 IoT Enterprise 2019 LTSC (x64)

Section 3: RXi HMI Windows Activation

The preloaded Windows 10 IOT Enterprise image on RXi HMI is activated by Default. The product key is embedded with the Windows.

By default, the user must enable each device for activation.

Each device is subject to one of three potential states :

Activated State: If the device is connected to the Internet, the device will automatically activate over the Internet (Figure 1).

Figure 1: Activated State

Windows	is activated Read	d the Microsoft Softw	are License Terms
Product I	D: 00360-20000-00	0002-AA921	Change product keep

Deferred Activation State: If the device is not connected to the Internet, it will remain in a **deferred activation state** (Figure 2).

Figure 2: Deferred Activation state

and the second	and the second
Connect to the Internet to activate Windows.	Read the Microsoft Software
	License Terms
Product ID: 00360-20000-00002-04921	Activate Windows
110000010.00000 20000 00002 20021	Victore million.

Note: The Windows Activation dialog box will display **Connect to the Internet to Activate Windows,** but it may not display the **Activate Windows** icon nor reduce functionality.

Not Activated State: If the device connects to the Internet and the activation attempt fails due to an invalid licensing key or one that has exceeded its activation allotment, it will enter a Not Activated state.

Figure 3: Not Activated State

Windows activation	
Windows is not activated. Read the Microsoft Software License Terms	
Product ID: 00308-40000-00001-AAOEM	Activate Windows

After a device has been activated, it will remain activated unless a significant change triggers a need to reactivate the device, such as a motherboard replacement or completely reimaging the device.

Section 4: Movicon WebHMI Configuration

4.1 Movicon WebHMI Configuration

4.1.1 Deploying Movicon WebHMI projects in RXi HMI

This topic shows you how to transfer the project to an RXi HMI.

The steps to deploy the project correctly are:

- 1. Launch the Movicon.NExT 4.1 editors from the desktop shortcut or the Start Menu.
- 2. Create a new Movicon project by choosing the **WebHMI Project Wizard** model from the Startup Page. The user can open the already created project by clicking **Open Existing Project**.

Figure 4: WebHMI Project Wizard

3. Add required screens, graphical objects, tags, and configure drivers.

Note: Check the <u>Movicon NExT 4.1 User Manual</u> or online/local help for more details about the configuration of Movicon WebHMI Project.

4. The **Project Type** property is one of the project properties that is used to set the project as a **WebHMI** type. When setting the project as a WebHMI, the Project Explorer, Toolbox and Animation Explorer, and Command windows will only show the resources, animation objects, and commands that are supported while visualizing and using Web Client WebHMI.

Figure 5: Properties

This property setting is particularly useful when:

- planning to develop a project that includes only those functions supported by WebHMI,
- needing to verify the compatibility of a previously developed project with WebHMI visualization. Any objects and symbols used in the project and not supported by WebHMI will be highlighted as shown in Figure 6.

Figure 6: Datalogger

				#0
				005
				#0
				#0
				6
~				
		efresh		Ċ

5. Select the command from the **Options -> Create WebHMI (SVG/HTML5)** menu from the project's toolbar that starts the project's export to SVG as shown below:

Figure 7: SVG

6. Once the export process has terminated, the user will be prompted to confirm whether or not to deploy and run the Web Server and Project on remote HMI as shown in Figure 8. Select **Yes** and the Deploy Project window will display.

Figure 8: Run Server Remotely

Please Co	onfirm	×
?	Deploy completed. Run WebHMI Server remotely (Yes) or locally (No)?	
	Yes No Cancel	

7. The Deploy Project window allows you to deploy the project on the RXi HMI along with the I/O Data Server and Web Server which are needed to run the WebHMI locally on the HMI. Enter User and Password as shown in green color. Provide the IP Address of the RXi HMI and port as 5002 <IP Address of RXi HMI:5002> as shown in the blue color box. Finally, click on Connect Commands as shown in the red color box of Figure 9.

Check the Deploy Project Window section for a detailed view of the different Parameters.

Note: The default user and password are Admin@123

Disable Automatic Sign-In

If the automatic sign-in feature is not disabled, the scheduled browser will open two instances of Chrome on every reboot. To disable the feature, use the following steps:

Go to Settings > Accounts > Sign-in options > Privacy > Use my sign-in info to automatically finish setting up my device and reopen my apps after an update or restart. Set this option to **off** as shown in Figure 20.

Figure 20: Sign-In Options

Opening Browser Manually on RXi HMI

If the user elects to open the Movicon WebHMI screen manually by using the Google chrome browser with the addresses below, then Google chrome browser will not automatically start on every reboot with deployed project.

The following addresses can also be used by the web browser:

Example: https://192.168.29.73:5001

https://localhost:5001

It is also possible to open a different page from the Main page defined in the project by using the following syntax:

HTTP://<WebServer_IP_Address>:5000/?page=<ScreenName>

where **<ScreenName>** is the name of the Screen without extension.

Example: https://192.168.10.10:5001/?page=Screen1

Note: While opening the Movicon WebHMI Project using chrome browser the user will be prompted with a certificate that is not trusted as shown below. This is shown when the valid certificate is not installed. The user needs to click on Proceed to **<IP address of RXi HMI or localhost> (unsafe)** to start loading the Movicon WebHMI.

Figure 21: Untrusted Certificate

The user needs to create a self-signed certificate. The steps are available in Section 4.1.4, *Self-Signed Certificate Generation Steps*.

15. The Movicon WebHMI project can also be launched directly by Clicking on the **MoviconWeb HMI** icon on the desktop to open the webHMI Project. In this scenario chrome browser opens the Movicon WebHMI project in full-screen mode.

Figure 22: MoviconWeb HMI Icon

4.1.2 Deploy Project Window

The Deploy Project window allows the user to deploy the project on the HMI along with the I/O Data Server and Web Server which are needed to run the WebHMI locally on the HMI.

4.1.3 Profilo Info

This section demonstrates how to define different connection profiles, such as for Deploy Servers of different devices.

Figure 24: Profilo Info

ProfilesDefaultProfileImage: Constraint of the second secon	 Profilo Info 									
Profile Name DefaultProfile	Profiles	DefaultProfile	-	New	Save	Delete				
	Profile Name	Profile Name			DefaultProfile					
User Admin@123	User	User			Admin@123					
Password ••••••	Password		••••	•••••						
Host https:// 192.168.29.73:5002	Host		https:/,	/ 192.168.2	9.73:5002					
Reconnection Timeout 0	Reconnectior	n Timeout				0 🗘				
Overwrite Retentive Files	Overwrite Ret	tentive Files	~							

Profile name: The profile name is a unique identifier used by the developer to distinguish the various profiles.

User: The username is used to connect to the RXi HMI's Deploy Server.

Password: The password is used to connect to the RXi HMI's Deploy Server.

Host: The RXi HMI's IP address or hostname, including the Deploy Server port (E.g:192.168.0.74:5002)

Overwrite Retentive Files: The retentive data in the device will be overwritten with those in the project during the project deployment phase. The retentive files are located in the project folders:

- 1. ...\UFUAServer\Alarms
- 2. ...\UFUAServer\Tags
- 3. ...\UFUAServer\EventLog
- 4. ...\UFUAServer\Historian
- 5. ...\UFUAServer\DataLogger

Commands

From this section, it is possible to manage the connection to the Deploy Server, control the Runtime components, and manage the license on the remote device.

Commands					
	Disconnect				
Target Machine:	Control Commands				
Deploy Serv	er and Project				
Delete remote project					
Start	Servers				
 Advanced Servers Start 					
Start I/O Data Server					
Start WebHMI					
Start Browser					
 Remote License Info 					
Check Ren	note License				
Select and Install	the remote license				

Figure 25: Commands

- **Connect/Disconnect:** this allows you to connect to or disconnect from the RXi HMI's Deploy Server.
- **Deploy Project and Server:** deploys the Project, I/O Data Server, and WebHMI's Web Server on the RXi HMI.
- Cancel Remote Project: this cancels the project on the RXi HMI.
- Server Startup: Starts all the services on the RXi HMI.
- Advanced Server Startup: allows the execution of each Runtime component to be started up or stopped.
- Remote License Info > Check Remote License: displays the RXi HMI's active license options and Site Code
- Remote License Info > Install Remote License: this allows the software license to be installed on the remote HMI.

Note: When first connecting to the Target HMI and after the self-signed certificate has been accepted, you will be asked to download the I/O Data Server, the WebHMI's Web Server, and the project. If they are already present on the HMI, you will be asked if you wish to update them.

Upload Info

This section reports the progress of the transfer in progress.

Figure 26: Upload Info

▲ Upload Info	
Total upload in progress:	99%
Uploading: Finalizing file upload and dec	

Remote Device Info

This section shows the information on the remote device's processes and operating system.

Figure 27: Remote Device Info

•	Ren	note Device Info Target Mach	nine: Scheduled	Processes				
		Drag a column header here to group by that column						
		Name	CPU Usage	Paged Memory Size	Last Error			
	Þ	PlatformNextIOServer	38.6%	83394560				
		WebHMIServer	25.5%	0				
		ſ	Process Output					
		I/O Data Server Version: 4.0.300.	.25844, WebHMI	Server Version: 4.0.300).25844			
	OS Description : Linux 5.8.0-48-generic #54~20.04.1-Ubuntu SMP OS Architecture : X64 Framework Description : .NET Core 3.1.13 Process Architecture : X64							
			Close					

- Scheduled Processes: shows the process running on the remote HMI and CPU and RAM usage.
- **Process Output**: reports the actual Syslog file contents on the remote device.
- **OS Description:** shows the versions of the installed Runtime components and information on the HMI's operating system.

4.1.4 Self-Signed Certificate Generation Steps

1. Open a PowerShell window in administrator mode on the RXi HMI device and run the following command:

New-SelfSignedCertificate -NotBefore (Get-Date) -NotAfter (Get-Date).AddYears(1) -Subject "DESKTOP-HSCFREB" -KeyAlgorithm "RSA" -KeyLength 2048 -HashAlgorithm "SHA256" -CertStoreLocation "Cert:\CurrentUser\My" -KeyUsage KeyEncipherment -FriendlyName "HTTPS development certificate" -.TextExtension

@("2.5.29.19={critical}{text}","2.5.29.37={critical}{text}1.3.6.1.5.5.7.3.1","2.5.29.17={critical}{text}DNS=DESKTOP-HSCFREB")

Note: Make sure to change the Subject and DNS from DESKTOP-HSCFREB to your Machine Name as highlighted. Be sure to point the web browser to https://<Machine-name>:5001 once the machine name has been changed. It is advised to generate the certificate for localhost.

Figure 28: Windows Powershell

- 1. Press the (Windows) Key + R and type certmgr.msc
- 2. Find the certificate under Personal/Certificates. The **Issued To** field should be **DESKTOP-HSCFREB** and the **Friendly Name** should be HTTPS development certificate.

Figure 29: Issued To Field

16. Browse to the Path *"C:\Program Files\Progea\Movicon 4.1\DeployServer-Files"* and modify the appsettings.json file. Add Kestrel section as seen in Figure 39

Note: Browser to the path C:\Users\Public\Documents\Progea\DeployServer.NExT 4.1\WebHMIServer and also update appsettings.json file with the same information as done in Step 16.

Figure 39: Add the Kestrel Section

```
"Kestrel": {
   "EndpointDefaults": {
    "Protocols": "Http1"
    },
   "Certificates": {
        "Default": {
            "Path": "C:\\Users\\Progea\\Documents\\deployServer.pfx",
            "Password": "Admin@123"
        }
}
```

Note: In these parts, you need to change the path and the password with the data that you have used for export the certificate.

17. Restart the RXi HMI device.

Note: In this case locally you can connect without any warnings about the certificate. If you want to connect also using a remote computer, you MUST trust the certificate also in the remote machine on Local Computer -> Trusted Root Certification Authorities.

4.1.5 Restore Last Open Screen and Zoom

The **Restore Last Open Screen and Zoom** property is a project property that is used to reload the last screen opened by the user and resets the zoom status and the position of the scrollbars. The property is unchecked by default.

Figure 40: Restore Last Open Screen and Zoom

Notes :

- 1. The Zoom scenario will not work when the zoom functionality is applied with the touch screen on the RXi HMI device.
- 2. To properly configure the zoom functionality, apply the zoom feature with a mouse (using the Ctrl button and mouse scroll wheel) or use the Chrome settings zoom value.

4.1.6 Communication Error

Figure 41: Communication Error

When the user stops and starts the server while the WebHMI is already running, the values displayed may not update or the WebHMI may display the error message seen in Figure 41.

It takes around 60 seconds to get the updated values or come out of the error state automatically.

4.2 Licensing

4.2.1 Movicon Editor Licensing

The customer needs to contact the Progea support team for Movicon Editor license.

Movicon WebHMI Runtime License

This section describes the licensing of Movicon WebHMI running on RXi HMI.

Movicon WebHMI Runtime license will be activated by default on the RXi HMI device. Movicon WebHMI license Locking occurs during image deployment at the Factory. License Daemon checks and identifies HW and gets product SKU from the License file. License Daemon reads HW MAC address and writes a MAC address in the license file. The license file is a JSON template file with the name "license.json".

License is locked to a specific MAC address and uses the OpenSSL toolkit to create a signed digest from the license file. The signed digest is written to the signature file named "license. sig".

Checking Movicon Editor License

Select the command: **Options > License->Check License** menu from the project's toolbar to check the Movicon Editor License as shown below:

5.2

Settings

Settings page enables to store the settings of certain parameters of RXi HMI to a file (the extension assigned to this file type is .rbs) and then apply/restore the saved settings to the same RXi HMI or any other RXi HMI from the saved .rbs file, whenever required.

- 1. Launch RXi HMI OI Utilities. Select Yes on UAC prompt dialog.
- 2. Navigate to the Settings page under RXi HMI OI Utilities.

The settings page has two associated tabs:

- 1. System
- 2. Registry

System Tab – This tab has the different names of different settings that the user can select to save the setting's value to the file.

Note:

- 1. The System tab of the settings page is not used for setting the values for any device parameters. It is only used to make the selection of the parameter settings, that the user wants wishes to a file.
- 2. The feature supports saving and restoring static IP addresses.
- 3. Saving and restoring Date-Time will save or restore Time Zone information.
- 4. Restoring Display(Screen Rotation) is not allowed using Remote Desktop.

Registry Tab – This tab provides the option to the user to update values to keys in the device registry and save these records to the file so that the stored values can be restored to the corresponding keys, on the same RXi HMI at a later time, or, if needed, also on a different RXi HMI.

RXi HMI OI Utilities Launch Application Display (Screen Rotation) Taskbar Autohide کې Setup Scrollbar (Height/ Width) BackLight Transfer Project Date - Time Auto Logon SNTP (Enable/ Disable) System Information Services (HTTP/ FTP) 82 Movicon WebHMI Volume Properties Network Settings Change WebHMI Password Save or Restore the System settings and Registry. 9 Save Restore

2	System Information						Data	
8	Movicon WebHMI							Add Update
	Change WebHMI Password			Im	port			Delete Clear
2	Save or Restore the System settings and Registry.							Save Restore

To update the value to a registry key, the user needs to click on the **Update** button which is shown in Figure 55. This figure will provide the user the values necessary for the Key Path, Name, Type, and Data. After entering the values, click the **Add** button to save the data and the entered data may be viewed as a record in the Registry tab.

Figure 55: Add Registry Key on Registry Tab

The entered data can be edited by selecting the record in the list box and It will update the data by clicking on the **Update** button. We can delete the registry from the registry list as well by clicking on the **Delete** button. All the entries, which are shown in Figure 56, will be cleared after clicking on the **Clear** button.

5.2.1 Import Registry Data from XML File

An alternate method to input the data to the registry is by using the Import option where the registry value data is available in an XML file and then imported using the Import option in the dialog. The schema of the XML data can be seen in the screenshot below.

Figure 57: XML Schema for Registry

RXiHMIRegistries.xml - Notepad File Edit Format View Help				-		×
<pre>k?xml version="1.0" encoding="U <entries> <registry data="C:\P

5.2.3 Restore the Settings from a (.rbs) File

To restore the settings from a file to an RXi HMI, the following steps need to be executed:

- 1. Make sure that the file is browsable from the target RXi HMI.
- 2. Click on the Restore button, select Ok when prompted for confirmation which is shown in Figure 61.
- 3. In the Open File dialog, browse and select the (.rbs) file from which you would like to restore the data, then click on the Open button which is shown in Figure 62.
- 4. Once the .rbs file is restored then It will ask to restart the RXi HMI to apply the settings on the device which is shown in Figure 63.

5.3 Setup

The Setup page under RXi HMI IO Utilities allows the user to configure settings on the RXi HMI. It contains various tabs which will provide multiple operations on RXi HMI.

- Backlight It allows to configure the backlight/brightness.
- Display It allows to change the screen display rotation like 0, 90, 180, and 270 degrees of RXi HMI.
- Services It allows to enable or disable the FTP and HTTP services.
- SNTP It allows to fetch the network time settings from the configured SNTP server.

NOTICE

To limit distraction the touchscreen will not generate a tone when pressed unless the device is connected to an external speaker.

A cursor will not display when the touchscreen is pressed. .

5.3.1 Backlight Tab

Backlight Adjustment

- 1. Select the **Backlight** tab to configure the backlight.
- 2. The user can enable the **Automatically Turn off Backlight in** and specify an amount of time. The time intervals can be configured for 0 seconds (min.) to 5 hours (max.).
- 3. The user can set the backlight using the slider.

Figure 64: Backlight Adjustment

Note: Display Screen Rotation cannot be changed when RXi HMI Device is connected through Remote Desktop.

A CAUTION

Although Emerson recommends the use of the protective sheet, do not operate the touchscreen with any hard materials, such as a screwdriver. This could damage the touchscreen display.

5.3.3 Services Tab

Services tab will provide multiple operations on RXi HMI which are as follows

- Enable FTP Server
- Enable HTTP Server

Enable FTP Server

The File Transfer Protocol (FTP) server included with the RXi HMI unit supports standard (RFC 959). For secure transmission that protects the username and password and encrypts the content, FTP is often secured with SSL/TLS (FTPS) or replaced with an SSH File Transfer Protocol (SFTP).

Use RXi HMI Setup Tool to configure the FTP server. *By default, the server is not enabled*. Once enabled, a background program will run, waiting for clients to connect. Sessions that are idle for five minutes are terminated by the server.

The server supports the non-secure operation. All information including username, password, and data is transmitted with no encryption and is susceptible to packet sniffing and various FTP attacks.

To enable the FTP Server:

1. Navigate to **Control Panel\Programs and Features\Turn Windows features On or Off\Internet Information Services\FTP Server**. Check all checkboxes that apply.

Note: If the server status is changed, the RXi HMI must be restarted before changes take effect.

Enable HTTP Server

The HyperText Transfer Protocol (HTTP) server is included with the RXi HMI supports standard (RFC 2616). The HTTP server is configured with the RXi HMI Setup Tool. *By default, the server is not enabled.* Once enabled, a background program will run, waiting for clients to connect. An HTTP server can be accessed through the domain names of the websites it stores, and it delivers the content of these hosted websites to the end user's device. The server supports non-secure port 80 operations. Most browsers make HTTP requests on ports 80 and 443 by default.

To enable the HTTP Server:

- 1. Navigate to **Control Panel\Programs and Features\Turn Windows features On or Off\Internet Information Services\Web Management Tools.** Check all checkboxes that apply.
- 2. Navigate to Control Panel\Programs and Features\Turn Windows features On or Off\Internet Information Services\World Wide Web Services. Check all checkboxes that apply.

Note: If the user checked the FTP Server then we can see that the FTP service is running on RXi HMI.

Note: If the server status is changed, the RXi HMI must be restarted before changes take effect.

Figure 67: Services Tab

5.3.4 SNTP Tab

The SNTP tab allows fetching the network time settings from the configured SNTP server Select the **SNTP** tab to update the RXi HMI system time.

The SNTP server included with the RXi HMI supports SNTP Version 4 for IPv4, IPv6, and OSI. By default, the server is not enabled. The SNTP server supports non-secure UDP port 123 operations.

- 1. Check Enable SNTP.
- 2. Select from the drop-down or enter the server's name manually to configure the server.
- 3. Click on Update Now.
- 4. The RXi HMI will fetch the date and time from the configured server

Note: The user can enter multiple server names with comma-separated values.

Figure 68: SNTP Tab

5.4

Transfer Projects

The Transfer Projects Page will allow the user to perform multiple operations on RXi HMI which are listed below:

- 1. **Copy Project**: This operation copies the projects of RXi HMI to Removable Media transfers using SD cards.
- 2. **Project Update**: This operation updates the projects that are currently stored on the RXi HMI unit with a revision stored on a flash device, such as a Removable Media.
- 3. **Restore Project:** This operation restores the saved projects to any other RXi HMI from the Removable Media.

The installed Movicon WebHMI is secured with user and password. The user shall be able to proceed only when the credentials are successfully authenticated.

Note: The default user and password are Admin@123.

5.4.1 Copy Project

Before disconnecting power, verify that the copy or update operation is complete (no busy message or wait cursor).

To copy a project to a Removable Media:

- 1. Verify that there is a blank USB plugged into RXi HMI. FAT32 type is supported.
- 2. Launch RXi HMI OI Utilities. Select Yes on UAC prompt dialog.
- 3. Navigate to the Transfer Projects page under RXi HMI OI Utilities.
- 4. The user may need to select the target removable media if more than one is available on the RXi HMI.

5. After the user selects specific media (drive) or the default media (when only a single removable drive is available), the system will request the user's profile credentials (project deployment credentials) (Figure 69).

Figure 69: Profile Credentials

6. After successful credentials, it will launch the below dialog (Figure 70). The user needs to click on the **Yes** button to proceed with copy the projects.

Figure 71: Copy Project Status

8. The status dialog box sill prompt a **Copy Done** message once projects are copied to the removable media (Figure 72). Click **OK**.

Figure 72: Copy Project Status

Note:

Figure 73: No Removable Media

After selecting the **Transfer Projects** tree item, if RXi HMI cannot find the Removable Media, then the user will be prompted with the below message (Figure 73).

While the project files are copying, if the user tries to close the dialog box, it prompts the below message (Figure 74) to the user. If the user clicks **Yes** it will stop the copying operation. If the user clicks on **No**, the project files will continue to copy.

5.4.2 Restore Project from Removable Media

The Restore Project function restores the saved projects to any other RXi HMI from the Removable Media.

To restore a project to an RXi HMI:

- 1. After successfully copying the projects to the removable media, insert this removable media into the RXi HMI hardware and reboot the unit.
- 2. After powerup, the unit will prompt the user with the below dialog (Figure 75) to proceed to restore copied projects from the removable media to the RXi HMI.

Figure 75: RestorePCCard

RestorePCCard Verified publisher: Intelligent Platforms, LLC. File origin: Hard drive on this computer Show more details Yes No	^{User Account Control} Do you want to allow this app to make changes to your device?	×
Yes No	Show more details	
	Yes No	

3. The user will now see the drive selection screen as shown in Figure 76.

Note: If there are only one removable media in the RXi HMI, the hardware will default to the mounted drive.

Figure 76: Select Media Select Media for Restore: D:\ OK Cancel

4. The user will see the prompt to proceed with the upgrade of the WebHMI project. Click the **Yes** button to proceed.

Figure 77: Proceed with Upgrade of the WebHMI Project

	Proceed with upgr	ade of the We	ebHMI projec	t?		

5. Once the project files are copied from removable media to RXi HMI, the user will see a **Copy Done** message (Figure 78).

Figure 78: Copy Done		
	Copy Project Status	
	Copy Done	
	ОК	

6. In a few seconds, a WebHMI screen will appear in the chrome browser in full-screen mode. Once the Chrome browser is launched, it can take up to one minute for the WebHMI screen to load completely.

Note: While the project files are copying, if the user tries to close the dialog box, it prompts the below message (Figure 79) to the user. If the user clicks **Yes** it will stop the copying operation. If the user clicks on **No**, the project files will continue to copy.

Figure 79: Exit Application

RXi HN	лі
?	Copying of the project is still in progress. Do you want to close the application?
	Yes No

- 7. The restore/ upgrade operation will start when the removable media files have finished copying using the transfer project instructions.
- 8. The WebHMI will not start until the restore/ upgrade process is completed.

5.5

Auto Logon

Users can configure the RXi HMI for auto logon. To enable/disable the feature:

- 1. Launch RXi HMI OI Utilities.
- 2. Select **Yes** on UAC prompt dialog.
- 3. Navigate to the Auto Logon page under RXi HMI OI Utilities.

Note: The following steps need to be performed for each user

4. Select the **Enable/Disable** option (as shown in Figure 80).

Enter the username, password, and domain (if available) and click **Apply**. If the entered credentials are valid, then the Auto Logon feature will be enabled/disabled for the specific user. The user will be prompted to either Reboot Now or defer to later as shown in

5. Figure 81.

If the entered credentials are not valid, an appropriate failure message will be shown to the user.

5.7

Movicon WebHMI

Movicon WebHMI helps the user to launch deployed WebHMI Project. This page provides the details about the installed Movicon WebHMI version and deployed project name.

- 1. Launch RXi HMI OI Utilities. Select Yes on UAC prompt dialog.
- 2. Navigate to the Movicon WebHMI page under RXi HMI OI Utilities.
- 3. Click on the **Start WebHMI** button as shown in Figure 83.
- 4. WebHMI screen will run automatically in chrome browser with full-screen mode.
- 5. If the project is not deployed, then the Chrome browser will run automatically and display the message that **A Movicon WebHMI project couldn't be found on the device** for the first time. Please download the WebHMI project from Movicon configuration tool as shown in Figure 84.

Section 6: Remote Connection

The RXi HMI can be connected remotely from a local PC. There are two ways to connect remotely:

6.1 Remote Desktop

- 1. Enable Remote Connection on RXi HMI. Select **Start** > **Settings** > **System** > **Remote Desktop** and turn on **Enable Remote Desktop**.
- 2. On your local PC: In the search box on the taskbar, type Remote Desktop Connection, and then select Remote Desktop Connection.
- 3. In Remote Desktop Connection, type the IP Address of the RXi HMI you want to connect to and then select **Connect**.

6.2 VNC Client

The user can use any VNC client software to connect the RXi HMI. To do so the user needs to start the VNC server on the RXi HMI device.

VNC Server can be launched with the following steps:

- 1. Launch **RXi HMI OI Utilities**. Select **Yes** on UAC prompt dialog.
- 2. Navigate to the Launch Application page under RXi HMI OI Utilities.
- 3. Click the **VNC** icons to launch the application.

Figure 89: Launch the VNC Application

Note:

Figure 90: Sleep Configuration

1. The remote connection to RXi HMI cannot be done if the device is in sleep mode. The user needs to awake the RXi HMI or set the Sleep to Never as shown below.

\leftarrow Settings	
යි Home	Power & sleep
Find a setting	Screen
System	When plugged in, turn off after
🖵 Display	
ላ») Sound	Sleep
Notifications & actions	When plugged in, PC goes to sleep after
J Focus assist	
🖒 Power & sleep	
📼 Storage	

- 2. It is required to launch VNC Server after the RXi HMI device reboots.
- 3. The UAC (User Account Control) dialog prompts on RXi HMI will close the VNC Connection.

Section 7: Image Recovery

7.1 Recovery/Upgrade Image

Image Recovery Solution (RCV) can be used to restore/reset a Windows installation on a unit initially delivered with a preloaded Windows image that is not able to boot any longer. This can also be used to upgrade to the new Major version of RXi HMI.

7.2 Create a Bootable USB Flash Device

This outlines the steps necessary to create a bootable USB flash device and copy Windows PE for Windows image deployment to it.

Note: Use FAT32 type USB Flash Drive that is between 8 and 32 GB.

1. Stick Insertion, Console Window

Insert USB device and open a command window. Use **Run as administrator** if you work on a system with UAC active. Alternatively, you can choose to open a non-elevated console window. This will cause the UAC dialog when you call the diskpart utility in the next step.

- 2. At the console prompt enter: Diskpart
- 3. Enter: List **Disk** to list the disks to identify the CORRECT disk number corresponding to your USB stick

Figure 91: List Available Disks

🔤 Administrator: Command Prompt - diskpart

:\PE>diskpart

Microsoft DiskPart version 10.0.18362.1533 Copyright (C) Microsoft Corporation.

On computer: INHYD-2M7N7Y2

4. Identify and select the disk inserted in step 1.

Figure 92: Select Disk

D	ISKPART> s	elect disk 1				
D:	isk 1 is n	ow the selected	disk.			
D:	ISKPART> 1	ist disk				
	Disk ###	Status	Size	Free	Dyn	Gpt
	Disk 0	Online	238 GB	2048 KB		*
*	Disk 1	Online	28 GB	0 B		

5. Erase your USB stick.

Figure 93: Erase Disk

DISKPART> clean		
DiskPart succeeded	in cleaning the disk.	

6. Enter **list disk** to verify the free space on your disk.

Figure 94: Verify Disk Free Space

D	DISKPART> list disk									
	Disk ###	Status	Size	Free	Dyn	Gpt				
	Disk 0	Online	238 GB	2048 KB		*				
*	Disk 1	Online	28 GB	28 GB						

7. Enter create a partition primary to create a primary partition.

Figure 95: Create Primary Partition

```
DISKPART> create partition primary
DiskPart succeeded in creating the specified partition.
```

8. Check the volumes and be sure the partition you selected is already selected (noted by the asterisk '*'). Otherwise, issue the command **select vol 4** (in this case).

Figure 96: Select Partition

DISKPART> list vol									
Volume ###	Ltr	Label	Fs	Туре	Size	Status	Info		
Volume 0	С	WINDOWS	NTFS	Partition	129 GB	Healthy	Boot		
Volume 1	D	New Volume	NTFS	Partition	107 GB	Healthy			
Volume 2		SYSTEM	FAT32	Partition	1000 MB	Healthy	System		
Volume 3			NTFS	Partition	668 MB	Healthy	Hidden		
* Volume 4	Е		RAW	Removable	28 GB	Healthy			

9. Issue command **format fs=fat32 label=RecoveryUSB quick** to format the selected volume/partition.

Note that specifying a label for the partition is optional but recommended. Also, note that specifying the "quick" option can be used for quick format.

Figure 97:	Partition	Completed
------------	-----------	-----------

DISKPART> format fs=fat32 label=RecoveryUSB quick 100 percent completed DiskPart successfully formatted the volume.

10. Issue command list vol to check volumes

Figure 98: Check Volumes

D	DISKPART> list vol									
	Volume ###	Ltr	Label	Fs	Туре	Size	Status	Info		
	Volume 0	С	WINDOWS	NTFS	Partition	129 GB	Healthy	Boot		
	Volume 1	D	New Volume	NTFS	Partition	107 GB	Healthy			
	Volume 2		SYSTEM	FAT32	Partition	1000 MB	Healthy	System		
	Volume 3			NTFS	Partition	668 MB	Healthy	Hidden		
*	Volume 4	Е	RECOVERYUSB	FAT32	Removable	28 GB	Healthy			

11. Use the **assign** command to assign a drive letter.

This step is necessary only if a drive letter is not already assigned. (For example, Step 8 did not display a proper drive letter for the newly created volume.) Note that the assigned command may interfere with current network drive mappings in case a spare drive letter cannot be found below the first drive letter corresponding to a network share. If a drive letter is already assigned you may omit this step. In this case, use for subsequent steps the drive letter already assigned.

Figure 99: Assign drive letter

12. Check the assignation with the **list vol** command.

Figure 100: Verify the Drive Letter Assignation

DISKPART> list vol								
Volume ###	Ltr	Label	Fs	Туре	Size	Status	Info	
Volume 0	С	WINDOWS	NTFS	Partition	129 GB	Healthy	Boot	
Volume 1	D	New Volume	NTFS	Partition	107 GB	Healthy		
Volume 2		SYSTEM	FAT32	Partition	1000 MB	Healthy	System	
Volume 3			NTFS	Partition	668 MB	Healthy	Hidden	
* Volume 4	F	RECOVERYUSB	FAT32	Removable	28 GB	Healthy		

13. Enter **Exit** to exit the diskpart.

Figure 101: Exit Drive Partition

DISKPART> exit Leaving DiskPart... C:\PE>_

7.3 Copy the Windows PE Image

1. Copy the file/directory structure below the Contents folder (i.e. not the Contents folder itself) to the USB stick. You can issue a console command or do this in the GUI (Explorer, Total Commander). The example command is in Figure 102.

Note: The number of files copied in this step may vary depending on how many files are actually in the Contents folder of the environment which you copy. There may be a difference due to the number of files in the utilities or/and the images folder.

Figure 102: Copy the Image

```
Contents\bootmgr.efi
...
Contents\sources\boot.wim
...
xxx File(s) copied
```

Figure 103: Contents Copied Successfully

C:\PE>dir F Volume in Volume Ser	: drive F is H ial Number :	RECOVERYUSB is 9C1D-B65B

C·\PE>			

- 2. Copy the Recovery Image(s) (**RXi_Win10_2019_HMI_rxxx.swm** to the images folder. These are typically .swm-files or a .wim-file.
- 3. Eject and remove the WinPE USB stick just created.

7.4 Install the Windows 10 Recovery/Upgrade Image

This describes, in brief, the installation of the Windows 10 Recovery Image on RXi HMI.

- 1. Create a bootable USB Flash Device as described in Section 7.2, *Create a Bootable USB Flash Device*. Use a USB Stick that is between 8 and 32 GB in size.
- 2. Insert the bootable USB Flash Device into the RXi HMI.
- 3. Power on the RXi HMI and enter the UEFI setup by pressing F2 or Del right after the keyboard LEDs are lit.
- 4. Set the date and time. This is important for correct Windows operation and later reference.
- 5. Exit UEFI setup saving the changes and enter the boot device selection dialog: press F7 during the boot sequence as soon as the KBD LEDs are lit.
- 6. Select the boot entry named **UEFI: <Your UFD>** and press Enter. The graphics displayed during system startup may look a bit scrambled, but this is not of any importance.
- 7. A console window opens. Enter **go** at the user prompt if you are sure you want to proceed.
- 8. It will back up the license files [License.json, License. sig] from the hardware unit where the recovery image is getting installed to the bootable USB device.
- 9. The image installation will execute by applying the image to the hardware unit.
- 10. It will restore the license files [License.json, License.sig] to the hardware unit from the bootable USB device. After restored License files are deleted from the bootable USB device. A system restart will occur.
- 11. Windows will initialize and finally end up at the Windows Welcome screen. In case the system cannot start due to an invalid boot entry repeat Steps 5 and 6 and select **Windows Boot Manager**.

7.5 Movicon WebHMI Licensing

The preloaded Movicon WebHMI on RXi HMI is licensed by Default. During the installation of the Recovery/Upgrade image Movicon WebHMI licensing depends on 2 scenarios.

7.5.1 Scenario 1: Windows File System Accessible

The Movicon WebHMI license will be backed up to a Windows PE bootable USB device from the hardware unit during the installation of Recovery/Upgrade Image. After the installation of the Image Movicon WebHMI License is restored to the hardware unit from the Windows PE bootable USB device.

7.5.2 Scenario 2: Windows File System Corrupted

If the Windows file system is corrupted, then the user will be shown the error Message: License.json and License.sig files couldn't be found on the device during backing up the licensing from the Hardware unit. Please contact technical support for License files after Image Recovery.

Once the recovery/upgrade image is installed on RXi HMI then once again error Message will be shown to the user: License.json and License.sig files couldn't be restored to the Hardware unit. Please contact technical support for License files after Image Recovery".

The user should follow the instructions outlined in Section 7.6, Obtaining License Files.

7.6 Obtaining License Files

The customer needs to follow the below steps to collect the License Files from the technical support team.

- 1. The customer needs to get the Hardware MAC address and sent it to the technical support team for generating the License.
- 2. Launch CMD and change the directory to "C:\Program Files\Emerson\libipld" on the RXi HMI Hardware unit.
- 3. Run the command: ipldutil.exe select

Figure 104: Run ipldutil.exe select

```
C:\Program Files\Emerson\libipld>ipldutil.exe select
IPLD Utility V1.0 - Built Jun 17 2021 13:10:10
Selected MAC addresses found: 4
7C:CB:E2:E2:10:CB
7C:CB:E2:E2:11:51
7C:CB:E2:E2:10:CA
7C:CB:E2:E2:11:50
C:\Program Files\Emerson\libipld>_
```

- 4. Copy any Mac Address as generated in Step 3 and send it to the Technical Support Team.
- 5. The customer needs to copy the obtained License.json and License.sig files from the Techincal Support team to C:\ProgramData\Emerson\libipId on RXi HMI Hardware unit.

Section 8: Accessing the BIOS

8.1 BIOS Settings

8.1.1 Accessing the BIOS (RXi HMI)

The BIOS is a program that handles basic levels of communication between the CPU and peripherals. It contains codes for various advanced features found in this system board. The BIOS allows you to configure the system and save the configuration in a battery-backed CMOS so that the data is retained even when the power is off. In general, the information stored in the CMOS RAM of the EEPROM will stay unchanged unless a configuration change has been made, such as a hard drive replaced or a device has been added.

The CMOS battery can fail over time, causing CMOS data loss. If this happens, you need to install a new CMOS battery and reconfigure the BIOS settings.

Keys	Function	
Right and Left arrows	Moves the highlight left or right to select a menu.	
Up and Down arrows	Moves the highlight up or down between submenu or fields.	
Enter	Press Enter to enter the highlighted submenu or item.	
+ (plus key)	Scrolls forward through the values or options of the highlighted field.	
- (minus key)	Scroll backward through the values or options of the highlighted field.	
<f1></f1>	Displays general help	
<f2></f2>	Pervious values	
<f3></f3>	Load Optimized Defaults	
<f4></f4>	Saves and resets the setup program.	
<esc></esc>	Exit to the BIOS Setup Utility.	

Submenu

When "□" appears on the left of a particular field, it indicates that a submenu that contains additional options is available for that field. To display the submenu, move the highlight to that field and press **Enter**.

AMI BIOS Setup Utility (RXi HMI)

Accessing the BIOS

To access the BIOS, you must attach a USB keyboard to the device and repeatedly press the **Delete** key during the startup sequence until it brings you to the BIOS Main Menu.

Main Menu

The Main menu is the first screen that you will see when you enter the BIOS Setup Utility.

Figure 105: Main Menu

BIOS Information Project Name BIOS Version	SBC7818 194.15A	Choose the system default language
Memory Information Total Memory	8192 MB (DDR3)	
System Date System Time	[Thu 10/08/2020] [10:06:31]	
Access Level	Administrator	++: Select Screen 11: Select Item Enter: Select +/-: Change Opt. F1: General Help F2: Previous Values F3: Optimized Defaults F4: Save Changes and Reset ESC: Exit

BIOS Parameter	Description
System	Choose the system default language.
Language	
System Date	The date format is <day>, <month>, <date>, <year>. Day displays a day, from Sunday to Saturday. Month displays the month, from 01 to 12. Date displays the date, from 01 to 31. Year displays the year, from 1980 to 2099.</year></date></month></day>
Time Time format is <hour>, <minute>, <second>. The time is based on the 24- military-time clock. For example, 1 p.m. is 13:00:00. Hour displays hours from to 23. Minute displays minutes from 00 to 59. Second displays seconds from 59.</second></minute></hour>	

Advanced

The Advanced menu allows you to configure your system for basic operation. Some entries are defaults required by the system board, while others if enabled, will improve the performance of your system or allow the user to set some features according to their preference.

Figure 106: Advanced Menu

ACPI Settings

This section configures system ACPI parameters.

Figure 107: ACPI Settings

BIOS Parameter	Description
Network Stack	Enable or disable the UEFI network stack. When Network Stack is set to enabled, the screen will be displayed as below.
Ipv4 PXE Support	When enabled, Ipv4 PXE boot supports. When disabled, the Ipv4 PXE boot option will not be available.
Ipv6 PXE Support	When enabled, Ipv6 PXE boot supports. When disabled, the Ipv6 PXE boot option will not be available.
PXE Boot Wait Time	Enter the wait time value to abort the PXE boot.
Media Detect Time	Enter the wait time in seconds to detect media.

Chipset

This section configures relevant chipset functions.

Figure 116: Chipset Screen

BIOS Parameter	Description
OnChip SATA Channel	Enable or disable Serial ATA
OnChip SATA Type	Select OnChip SATA Type: Native IDE, AHCI, or Legacy IDE.
SD Mode	Enable or disable Secure Digital (SD) Mode configuration.
SD Host Controller Version	Select Secure Digital (SD) host controller version: SD2.0 or SD3.0.
HD Audio	HD Audio will be enabled if present, disabled otherwise.
	Power On – When Power returns after an AC power failure, the
	system will automatically power on.
	Power Off - When power returns after an AC power failure, the
	system will remain off. You must press the Power button to power
	on the system.
Restore on AC Power Loss	Last State - When power returns after an AC power failure, the
	system will return to the state where you left off before power
	failure occurs. If the system's power is off when AC power failure
	occurs, it will remain off when power returns. If the system's
	power is on when AC power failure occurs, the system will power
	on when power returns.
GPP2 Hotplug Mode Control	Enable or Disable GPP2 Hotplug Mode Control
GPP3 Hotplug Mode Control	Enable or disable GPP3 hotplug mode control.
DP0 Output Mode	Select NB PCIe to connect type (display device): EDP or Disabled.
Dp1 Output Mode	Select NB PCIe connect type (display device): DP or Disabled
Auto Do aldialat Dimensia	This is by default enabled. Enable or disable dimming backlight by
	TB573D.
Minimum Dimming Level	Set the minimum dimming level control. The range is 1~20%.

Updating the BIOS

To update the BIOS, you will need the BIOS file and a flash utility. Please contact technical support or your sales representative for the files. The contact information is located at the end of this document.

Section 9: Mounting Information

9.1 Panel Mount

The RXi HMI can be panel-mounted. Panel Thickness: 16¹ to 7 gauge (1.6 to 5 mm) Panel Thickness: 1.6 to 5mm All measurements within ±0.5mm

9.1.1 Panel Cutout Dimensions

Height

Figure 122: Panel Cutout Dimensions

Display Size (in)	Width (mm)	Height (mm)
12	317	214.5
15	398	245.5
19	482	297
24	581	360

All panel cutout measurements should be within ± 0.5 mm. Values presented are width and height only.

¹ For IP66 installations of 12-inch displays (IC760CSW12CDA) use a 14 to 7 gauge (2 to 5 mm) thick panel.

9.1.2 Installation Steps

- 1. Verify that the gasket is present and properly seated in the bezel channel located on the sides of the unit.
- 2. Carefully insert the RXi HMI into the mounting panel cutout.

Figure 123: Panel Install View

3. Insert the hook of the mounting bracket into the mounting hole as displayed in the following figure.

- 4. Tighten all mounting brackets by hand until the gasket seal contacts the mounting surface uniformly.
- 5. In a cross pattern around the monitor tighten all mounting clip screws to a torque of 13 to 13.9 in-lbs. (15 to 16kgf-cm) making sure not to overtighten the bracket.

9.2 Mounting to Modular Display

Figure 127: 15" Mount

Figure 128: 19/24" Mount

9.3 VESA Mount

9.3.1 VESA Mount Dimensions

The RXi HMI can also be VESA mounted as shown in the figures below. All 12" through 24" units include VESA Mount Dimensions of 100 mm x 100 mm.

All units are fastened with four M4x8 screws.

Section 10: Physical Connections and Configuration Settings

Input Power (24V DC-in)

To connect to power, follow these steps:

- 1. Verify that the power cable is not energized.
- 2. Loosen the screw clamps on the mating power connector.
- 3. Strip the insulation from the power cables.
- 4. Secure the power cable to the mating connector, noting polarity, and tighten the screw clamps. The torque for the attaching screws is 0.3 Nm (2.26 in-lb).
- 5. Apply dc power to the unit. During normal startup and operation, the LED status indicator displays as follows:
 - Solid amber while the RXi HMI unit is starting up
 - Solid green during normal operation

Be sure to connect a DC power cord to this 3-pin power connector. Using a voltage out of the range may fail to boot the system or cause damage to the system board.

10.1 Graphics Interface

The RXi HMI uses a DisplayPort to connect to a display device such as a computer monitor. The DisplayPort connection will be used to transmit both audio and video. If additional configuration is required, visit the Chipset menu in the device BIOS on startup.

10.2 Ethernet Ports

The RXi HMI has Four Base-T Ethernet Ports. Use the LAN ports to connect to a local area network through a network hub or router. If additional configuration is required, visit the Wakeup Configuration menu in the device BIOS on startup.

10.2.1 Ethernet Port Operation LEDs

Speed Link Activity	LED	LED State	Operating State
	Speed	Yellow, ON	10/100/1000
	Link Activity	Green, ON	Link Status

10.2.2 Operation Status LEDs (Screen)

RXi HMI has a tri-color LED built into the screen that provides a visual indication of the operation status.

LED State	System State
Amber, Solid	Operating system starting
Green, Solid	Normal operating state
Green, Blinking	Backlight off
Red, Blinking	Backlight failure
Off	Power not applied to the unit

10.3 USBs

The RXi HMI features two USB 2.0 (Type-A) ports for the mouse and keyboard. (There are also two USB 3.0 (Type-A) ports for external storage devices.) If configure the device to wake on keyboard/mouse function visit the Wakeup Configuration menu in the device BIOS on startup.

10.4 Serial Connectors (UART)

The RXi HMI features two serial port connections. Connect these devices using the pin-out configuration seen in

Serial Connection	Pin	Function
	1	TXD
	2	RXD
RS232	3	RTS
	4	CTS
	5	GND
	6	TX+
	7	TX-
RS485	8	RX+
	9	RX-
	10	GND

10.5 I/O Connectors

10.5.1 Serial ATA (SATA) Connector

Features

1 Serial ATA 3.0 port with data transfer rate up to 6Gb/s

Integrated Advanced Host Controller Interface (AHCI) controller

The Serial ATA connector is used to connect the Serial ATA device. Connect one end of the Serial ATA data connector to a SATA connector on the other end to your Serial ATA device.

BIOS Setting

Configure the Serial ATA drive in the Chipset menu (SB SATA Configuration submenu) of the BIOS. Refer to chapter 3 for more information.

10.6 Expansion Slots

10.6.1 Micro SD Socket

The micro SD socket allows you to install a micro SD card for the expansion of available storage.

10.7 LVDS LCD Panel Connector

The system board allows you to connect an LCD Display Panel with the LVDS LCD panel connector. This connector transmits video signals and power from the system board to the LCD Display Panel.

Refer to the right side for the pin functions of the LVDS connector.

10.7.1 BIOS Setting

Configure the LCD panel in the Chipset menu (DISPLAY control submenu) of the BIOS. Refer to Chapter 3 for more information.

10.8 Audio

10.8.1 Rear Audio

The system board is equipped with 2 audio jacks (Line-out and Mic-in). A jack is a one-hole connecting interface for inserting a plug.

- Line-out Jack (Lime) This jack is used to connect a headphone or external speakers.
- Mic-in Jack (Pink) This jack is used to connect an external microphone.

10.9

Battery

The lithium-ion battery powers the real-time clock and CMOS memory. It is an auxiliary source of power when the main power is shut off or disconnected. It is a standard CR2032 battery and is accessible on the bottom of the computing module when separated from the screen (as shown inFigure 132.

Safety Measures

- Danger of explosion if battery incorrectly replaced.
- Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to local ordinances.

Figure 132: CR2032 Battery for 12 to 24 inch

WARNING

Use of Another Battery May Present a Risk of Fire or Explosion.

Replace Battery with Panasonic Model CR2032 only.

ACAUTION

Battery May Explode if Mistreated. Do not Recharge, Disassemble, or Dispose of In Fire.
