FWD is an ultrasonic flow meter that measures flow rate of the air or nitrogen gas in pipes from 25mm to 200mm. As an Air flow meter it is ideal for management of the operating load rate of the compressor, management of the amount of the used air in the factory and detecting of the air leakage in the factory.

**FEATURES**

1. **No pressure loss**
   Ultrasonic measurement involves no obstructions inside the measuring pipe, so there is no pressure loss.

2. **Strong resistance to oil and vapor**
   No moving parts means high resistance to fluids containing oil, vapor, and dust.

3. **Battery-powered**
   The built-in battery type (with a life of 10 years) makes power line construction unnecessary. The external power supply type (24V DC) is also available.

4. **Wide rangeability 1:60**
   The wide rangeability allows for accurate measurement of even smaller flow rates.

5. **Various output functions**
   Unit pulse, 4 to 20mA DC, upper/lower limit alarm, device error alarm

**Update rate:**

- 0.5 seconds (2 seconds for Built-in battery type)
  Calculates the moving average of instantaneous flow rates (default setting: a set of four measurements)

**Flow rate conversion:**

- Normal flow rate: a flow rate converted into the one under the conditions of 0°C and 1 atm.
- Standard flow rate: a flow rate converted into the one at the user-defined temperature and 1 atm.
Unit:
Accumulated flow rate: m³, L
Instantaneous flow rate: L/min, m³/h
Pressure: kPa
Temperature: °C

Note: Flow rates are indicated in either form of the actual flow rate or the converted flow rate, and the latter is further divided into the normal flow rate and the standard flow rate. For their definitions, see “flow rate conversion” on Page 1. The factory default setting for flow rate indication is Normal flow rate.

Display: You can change the indication mode and display contents by using buttons.

Installation Requirements
- Add a sunshade for the flowmeter if it is exposed to direct sunlight.
- Avoid places where:
  - the electromagnetic noise level is high
  - the atmosphere is corrosive
  - there is a risk of submersion
  - the flowmeter constantly gets wet

Piping Requirements
- It is recommended to secure at least 10D (D: diameter) straight pipe run both on upstream and downstream of the flowmeter.
- If the fluid contains a large amount of mist and/or dust, install the flowmeter on vertical piping.
