# INTRODUCTION

## MESSAGE FROM GEO CALIBRATION

Thank you for purchasing the GEO Calibration Hygro Max humidity and temperature generator/calibrator. We look forward to providing you the highest quality technical support as you become familiar with your new humidity and temperature calibrator.

To better familiarize yourself with the Hygro Max, please <u>visit our Youtube Channel by searching</u> <u>GEO Calibration for user friendly videos.</u>

To start using your GEO Hygro Max immediately, you may proceed to our **Quick Start Guide (page 16)**.

For a deeper review of the Hygro Max, See our <u>Calibration Technical Recommendations (page</u> **25)**.

#### Regards,

**GEO Calibration Service Team** 

## WARNING

As you read through this product manual, please familiarize yourself with our recommended best practices. By following the proper procedures, you will ensure your unit consistently performs to its highest potential.

Once you have removed the Model Hygro Max from its external packaging, please visually inspect the unit for damage. If damage is found, please immediately contact your supplier.

#### LIMITED WARRANTY AND LIMITATION OF LIABILITY

Each GEO Calibration product is warranted to be free from defects in material and workmanship under normal use and service. The warranty period is one year and begins on the date of shipment. Parts, product repairs, and services are warranted for 90 days. This warranty extends only to the original buyer or end-user customer of a GEO Calibration authorized reseller, and does not apply to fuses, disposable batteries, desiccants, distilled water, or to any product which, in GEO Calibration's opinion, has been misused, altered, neglected, contaminated, or damaged by accident or abnormal conditions of operation or handling. GEO Calibration does not warrant that software will be error free or operate without interruption.

GEO Calibration authorized resellers shall extend this warranty on new and unused products to enduse customers only but have no authority to extend a greater or different warranty on behalf of GEO Calibration. **Warranty support requires activation and registration at:** 

## https://www.geocalibration.com/register

and is purchased through a GEO Calibration authorized sales outlet or Buyer has purchased unit directly from GEO Calibration. GEO Calibration reserves the right to invoice Buyer for importation costs of repair/replacement parts when product purchased in one country is submitted for repair in another country. GEO Calibration's warranty obligation is limited, at GEO Calibration's option, to refund of the purchase price, free of charge repair, or replacement of a defective product which is returned to a GEO Calibration authorized service center within the warranty period.

To obtain warranty service, contact your nearest GEO Calibration authorized service center to obtain return authorization information, then send the product to that service center, with a description of the difficulty, postage and insurance prepaid (FOB Destination). GEO Calibration assumes no risk for damage in transit. Following warranty repair, the product will be returned to Buyer, transportation prepaid (FOB Destination). If GEO Calibration determines that failure was caused by neglect, misuse, contamination, alteration, accident, or abnormal condition of operation or handling, including over voltage failures caused by use outside the product's specified rating, or normal wear and tear of mechanical components, GEO Calibration will provide an estimate of repair costs and obtain authorization before commencing the work. Following repair, the product will be returned to the Buyer, shipped Ex Works FOB Suffolk County NY.

THIS WARRANTY IS BUYER'S SOLE AND EXCLUSIVE REMEDY AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. GEO CALIBRATION SHALL NOT BE LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OR LOSSES, INCLUDING LOSS OF DATA, ARISING FROM ANY CAUSE OR THEORY.

Since some countries or states do not allow limitation of the term of an implied warranty, or exclusion or limitation of incidental or consequential damages, the limitations and exclusions of this warranty may not apply to every buyer. If any provision of this Warranty is held invalid or unenforceable by a court or other decision-maker of competent jurisdiction, such holding will not affect the validity or enforceability of any other provision.

GEO Calibration Inc. 2190 Smithtown Avenue Ronkonkoma, NY, 11779 U.S.A.

#### **UNPACKING INSTRUCTIONS**

Once you have removed the Hygro Max from its external packaging, please visually inspect the unit for damage. If damage is found, please immediately contact your supplier.

#### **CALIBRATOR APPLICATIONS**

The GEO Hygro Max Humidity Calibrator generates and maintains a controlled humidity and temperature environment for the purpose of testing or calibrating humidity and temperature sensors, also known as hygrometers. The humidity calibration range is 1% up to 99%, while the temperature range is from 0°C to 60°C.

See the full technical specifications (page 25).

The system's accuracy is achieved via a NIST traceable internal control and reference probe.

The Hygro Max can calibrate many hygrometer types:

- Probes
- Data-loggers
- Chart Recorders
- Additional Assorted Hygrometers

Please review the dimensions of the calibration chamber to ensure compatibility with the size requirements of any hygrometers you intend to calibrate. You may require an Expansion Chamber. Your GEO representative should have reviewed this with you at time of purchase, if not, please contact our support team and they will size an Expansion Chamber accordingly.

The Hygro Max allows for multiple types and sizes of hygrometers, for a complete list please contact us at support@geocalibration.com.

#### **UNIT DIAGRAM AND PARTS LISTING**

Below you will find a diagram of the Hygro Max's various operational parts.

# SIDE Chilled Mirror (Optional) Fill Port Water Fill Level Indicator Drain Port

# **QUICK START GUIDE**

This guide is intended to give you the necessary information to quickly get up and running with your Hygro Max humidity and temperature generator.

It includes the following instructions:

- · Filling the Reservoir
- Powering On the Unit
- · Operating the Front Panel Controller
- Operating the Main Display
- · Opening the Door

# **Read Before Turning On The Unit**

1.

After receiving the unit, open the door to let the chamber dry for 10 minutes. Use soft paper tower to wipe the water in the chamber if needed.

2

Turn on the unit and set the temperature to 30 °C and humidity to 30 % to let the unit settle, approximately for 20 minutes (first time only).

#### **PLEASE NOTE:**

- 1. Do not use alcohol inside the chamber.
- 2. The above instruction must be followed to ensure unit is dry from any changes during shipping.

Distilled Water Only

# **Supplies Needed**

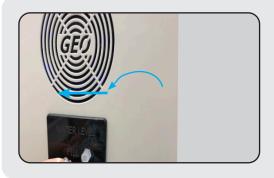

Fill Syringe

# 1. Locate the Fill Port on the right side panel

The port is located on the center top area of the right panel of the unit.

# 2. Remove the Fill Cap

Rotate Counter-Clockwise to remove.

# 3. Attach Fill Syringe to Fill Port

Press the fill syringe tip into the fill port, then rotate the cap clockwise to secure.

# 4. Elevate and Fill Syringe

- Pour distilled water into the elevated tube body.
- Take care not to insert any air into the reservoir.
- Monitor the overflow while filling.
- If water exits the overflow, then you have reached the maximum fill level.

#### FILLING THE RESERVOIR

# 5. Loosen and Remove Syringe

Turn the fill syringe tip counter-clockwise to loosen.

# 6. Re-Install the Fill Cap

Turn the cap clockwise to tighten the cap and seal the fill port.

## External Dryer"Out" Port

# PLEASE NOTE:

DO NOT BLOCK OR PUT WATER IN VENT HOLE.
DO NOT PUT WATER IN "IN" OR "OUT" PORT.

# PLEASE NOTE:

DO NOT FILL WATER ABOVE MAXIMUM FILL LINE.

**Supplies Needed** 

**Power Cord** 

1. Locate the Power Input

2. Plug Power Supply into Wall

3. Plug Power Supply into Unit

4. Set Power Switches to "ON"

#### **UNIT OPERATION (PID CONTROLLER)**

## 1. Boot Screen

Manufacturer Name Model Number Serial Number Firmware Version Number

# 2. Observe the Display

Current TemperatureTop RightCurrent Relative HumidityMiddle RightProgrammed TemperatureTop LeftProgrammed Relative Humidity Middle Left

Calculated Dew Point Bottom Left

# 3. Changing Humidity & Temperature

**Pressing the "Next" button** activates the set-point interface. The selected field will repeatedly flash its current programmed value. Repeated presses will toggle between the Humidity and Temperature fields.

# 4. Raise the Desired Set-point

Pressing the "UP" key will raise the selected set-point. Holding the "UP" key will rapidly raise the selected set-point.

# 5. Lower the Desired Set-point

Pressing the "DN" key will lower the selected set-point.

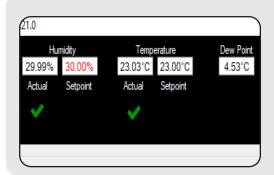

Holding the "DN" key will rapidly lower the selected set-point.

# **UNIT OPERATION (PID CONTROLLER)**

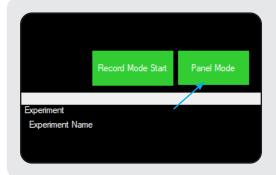

# 6. Commit Your Changes

Pressing the "EXIT" key will commit your changes.

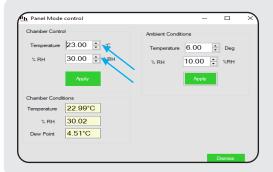

# 1. Observe the Display

Temperature Setpoint
Relative Humidity Setpoint
Actual Temperature
Actual Relative Humidity
Dew Point

# 2 Changing Humidity & Temperature

**Pressing the "Panel Mode" button** activates the set-point interface.

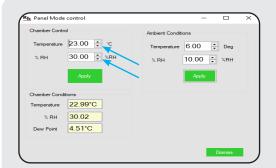

# 3. Raise the Desired Set-point

Pressing the "UP" arrow will raise the selected set-point.

Holding the "UP" arrow will rapidly raise the selected set-point.

point.

Or Enter the set-point.

# 4. Lower the Desired Set-point

**Pressing the "DOWN" arrow** will lower the selected setpoint.

**Holding the "DOWN" arrow** will rapidly lower the selected set-point.

**Or Enter** the set-point.

# 5. Commit Your Changes

Pressing the "APPLY" button will commit your changes.

#### **OPENING THE DOOR**

# 1. Power the Unit

In the Hygro Max, the door is electrically powered. Ensure that both power switches are in the ON position.

# 2. "Push and Press"

Simultaneously, press the door release button while pushing in on the door handle. You will hear an audible "click". This is the internal latch mechanism releasing.

# 3. Close the Door

Press firmly on the door handle until you hear the latch mechanism "click" again. This indicates that the internal latch has locked.

*In high humidity environment, please s	set the temperature first. Once t	temperature settled, then se	t the humidity.			

#### **SPECIFICATION ANNOTATIONS**

If the desired humidity set-point is higher than 70%,

- \* Set the temperature to your desired point first, and let the chamber stabilize. Next, set the humidity to the desired set point.
- \*\* To achieve low temperature with high humidity, you must first set the humidity value to 70% or lower, and let the chamber stabilize. Then, set the temperature to the desired set point. This avoids condensation appearing within the chamber.

#### Note:

If condensation is formed in the chamber:

- A. Open the chamber door and wipe any visible water away with a paper towel.
- B. Set humidity to 30% and temperature to 30 °C then let the unit dry and stabilize.

# **CALIBRATION**

#### **UUTs (UNITS UNDER TEST)**

Port Adapter

# **Supplies Needed**

# 1. Select Port Size Adapter

Measure the diameter of the UUT and select the appropriately sized silicone adapter. Unscrew the Hygro Max door and replace the adapter if necessary. Ensure the door is securely fastened to the chamber.

# 2. Insert UUT

Insert your UUT at least 3 inches into the Hygro Max chamber.

# 3. Program Unit Set-points

Allow the unit to reach the programmed set-points and settle. To best preserve desiccant, it is advised that you begin multi-point calibrations with low humidity set-points.

# 4. Compare Readouts

Follow the manufacturer's recommendation for recalibration and programming offsets.

# SYSTEM RECALIBRATION

#### SYSTEM UNCERTAINTY

The absolute uncertainty of the system depends on multiple variables:

- System Warm Up All components must be warmed up and stabilized before doing any calibration, as mentioned before, humidity depends on temperature, and the system must stabilize to ambient room conditions before performing calibrations.
- Uniformity Mixing of the humidity and temperature inside the chamber can cause uniformity issues. GEO has a unique chamber design to achieve high uniformity within all GEO chambers.
- Sensor/Probe Uncertainty This is the largest contributor to system uncertainty and that is why system probes are calibrated using instruments and standards traceable to the National Institute of Standards and Technology (NIST).
- Controller Error Our Controllers use PID loops with calculations down to 7 digits. These calculations have fractional errors that can compound if ignored. GEO's proprietary solutions are able to minimize controller error, leaving only a small amount of uncertainty contribution.
- Hysteresis Hysteresis is the system's error based on its usage history. GEO engineers have developed system modeling techniques to significantly reduce hysteresis uncertainties.

#### **AUTO-CALIBRATION | PC SOFTWARE**

This process is only available for licensed customers. For Auto-Calibration procedures please refer to Appendix A.

Customers not having purchased the license for Auto-Calibration software, please refer to the following pages for unit offset calibration.

# REFERENCE STANDARD RECALIBRATION

#### **Control Probe / Reference Sensor**

#### Overview

The Hygro Max functions through the use of a dual PID controller. This controller takes the humidity and temperature values from an internal capacitance probe and further performs calculations that are then used to generate the user entered humidity and temperature set points. This sensor is factory calibrated, and upon request, additionally calibrated by an ISO 17025 accredited laboratory using either a chilled mirror or two-pressure primary reference standard.

When calibrating the Hygro Max, the chamber must be measured at a variety of temperatures and relative humidity levels. It is recommended applying measurement guardbands to improve system accuracy and reduce any measurement uncertainties. The Hygro Max's humidity and temperature offsets must be changed if the control probe's readings are found to be outside of the allowed tolerances when compared to the reference.

#### **Capacitive Recalibration Intervals**

The scope and uncertainty requirements of this calibration will vary per customer. The capacitance probes that we use have an average drift of 1.0% RH per year. You should account for this interval, as well as your laboratory's uncertainty budget when calculating out your desired recalibration interval. The table below illustrates accuracy drift after 6, 12 and 24 months.

Timeframe	6 Months	12 Months	24 Months
Drift (%RH)	0.5% RH	1.0% RH	2.0% RH

Based on this information, you may wish to shorten or lengthen your calibration interval to respectively increase accuracy or decrease costs.

#### Chilled Mirror Recalibration Intervals

Chilled mirrors operate by measuring light defraction caused by frost or condensation formation on a mirror. Unless the mirror is damaged, it is not mandatory to recalibrate. It will require periodic cleaning, as per the manufacturer's instructions.

#### **Internal Capacitive Probe - Self Re-calibration Overview**

We advise that you return your capacitive reference probe to GEO Calibration for recalibration. However, for customers that are international or operate where policy restricts the use of international services, self recalibration is an option.

The following supplies are needed to recalibrate the internal capacitive control/reference probe:

- HW4 Calibration Software
- HygroClip DI Adapter Cable HC2 Pbe/USB, 6Ft
- A calibration reference with uncertainties of 0.5% RH or better.

# REFERENCE STANDARD RECALIBRATION

#### **Self Recalibration Procedure**

To read the recalibration procedure of the control / reference probe, please refer to the unit's user manual, and the HW4 software manual found at the following URLs as of publication of this manual:

https://s.campbellsci.com/documents/ca/manuals/hc2-s3-l man.pdf

https://goo.gl/n7qE1G

https://www.instrumart.com/assets/rotronic-hygroclip2-probes-manual.pdf

Before recalibration of any control probe, ensure that the unit and probe have both completely settled at 23°C for at least ten minutes.

#### **Maintaining Probe Accuracy**

The following text is the recommended maintanence best practices from Rotronic.

"The HC2S3 probe requires minimal maintenance, but dust, debris, and salts on the filter cap will degrade sensor performance. Check the white filter on the end of the sensor for debris. If dirt or salt is engrained into the filter, it should be cleaned with distilled water or replaced. Make sure the filter is connected firmly with your fingers — do not over tighten.

Check the radiation shield monthly to make sure it is free from dust and debris. To clean the shield, remove the sensor from the shield. Dismount the shield. Brush all loose dirt off. If more effort is needed, use warm, soapy water and a soft cloth or brush to thoroughly clean the shield. Allow the shield to dry before remounting.

Replace corroded, discoloured or clogged filters. To replace the filter, unscrew the filter from the probe and pull it straight away, being careful not to bend or damage the sensors. Before putting on the replacement filter, check the alignment of the sensors with the probe, and if necessary, carefully correct the alignment before installing the filter.

The Teflon filter is recommended when the sensor is installed in close proximity to the ocean or other bodies of salt water. A coating of salt (mostly NaCl) may build up on the radiation shield, sensor, filter and even the sensors. A build-up of salt on the filter or sensors will delay or destroy the response to atmospheric humidity.

Long term exposure of the relative humidity sensor to certain chemicals and gases may affect the characteristics of the sensor and shorten its life. The resistance of the sensor depends strongly on the temperature and humidity conditions and the length of the pollutant influence."

# **ENTERING HYGRO MAX OFFSETS**

# **Supplies Needed**

Windows PC with USB Port

**USB** Cable

#### **Unit Calibration Overview**

The Hygro Max uses a capacitive internal reference sensor that has an average uncertainty drift of 1.0% RH per year. It is recommended that users recalibrate their unit as needed to fit their overall uncertainty requirements. The factory recommended recalibration interval is once every six months.

Recalibration of the Hygro Max's reference sensor can be done with a two-pressure or chilled mirror primary measurement standard.

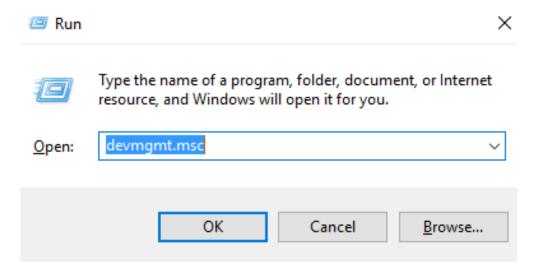

The following software items are required for recalibration:

- Windows Device Manager
- PuTTY \*

#### **Accessing the Device Manager**

Press and hold the Windows key, tap R, then release both keys.

A Run window will appear. Type **devmgmt.msc** into this window, then hit Enter on your keyboard.

<sup>\*</sup> PuTTY is a free and open-source terminal emulator. It is distributed under the MIT Software License, and is completely free for unrestricted commercial use. For more details on the PuTTY license, click here.

# ENTERING THE HYGRO MAX OFFSETS

#### **Reading the COM Port**

At this time, plug the unit's power supply into an approved power source.

Plug the USB mouse and keyboard into the Unit.

Toggle both the power switches to the "ON" position.

With Device Manager open, expand the Ports (COM & LPT) menu. While watching the expanded Ports sub-menu, plug the free end of the USB cable into the computer. A new entry will appear, called USB Serial Port. To the right of this text, will be parenthesis. Remember the text enclosed within these parenthesis. This is your COM Port, and will be referenced in the following sections.

Ports (COM & LPT)

Communications Port (COM1)

Communications Port (COM2)

ECP Printer Port (LPT1)

USB Serial Port (COM3)

#### **Installing PuTTY**

Visit www.ninite.com/putty to download the PuTTY installation executable file.

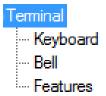

Run the executable and follow the automatic installer instructions to install PuTTY.

Once the installation is complete, run PuTTY by double clicking on the newly created desktop icon.

#### **PuTTY Setup**

Ensure that PuTTY is running on your computer.

From the Category option on the left side of the window, click Terminal menu item to expand the sub-menu.

Under Local echo, select the Force on button

# **ENTERING THE HYGRO MAX OFFSETS**

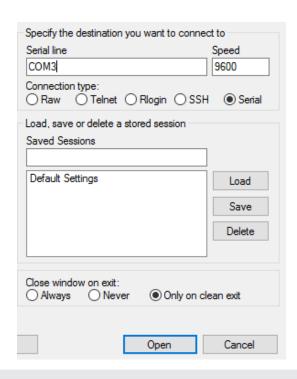

#### **Connecting Through PuTTY**

In PuTTY, select **Session** menu under Category on the left

Input your COM Port (reference **Reading the Serial Port** instruction from above) into the **Serial line** field

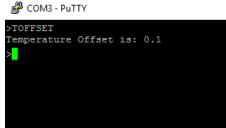

Under Connection type, select Serial

Click Open

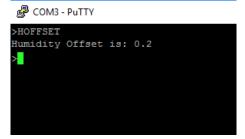

## **Reading Temperature and Humidity Offsets**

Temperature: type **TOFFSET** and press the enter key. The unit will query and display the temperature offset

Humidity: type HOFFSET and press the enter key. The unit will query and display the humidity offset

# **ENTERING THE HYGRO MAX OFFSETS**

#### **Changing Humidity and Temperature Offsets**

# #.# is a placeholder In the following instructions, replace # with your desired integers. (For example, #.# would become 1.2 or -0.2)

Temperature: type **TOFFSET #.#** and press the **Enter** key. The unit will query and display the temperature offset. Ensure it has been changed by typing in **TOFFSET**. Press the **Enter** key.

```
COM3-PuTTY

>TOFFSET

Temperature Offset is: 0.1

>TOFFSET -1.2

Temperature Offset is: -1.2

>
```

Humidity: type HOFFSET #.# and press the Enter key. The unit will set the humidity offset to the new value given by the argument. Ensure it has been changed by typing in HOFFSET . Press the Enter key.

```
COM3-PuTTY

>HOFFSET

Humidity Offset is: 0.2

>HOFFSET 1.2

Humidity Offset is: 1.2

>
```

# SAFETY WARNING

#### **General Safety Information**

- Read all provided and available safety information before you use the Hygro Max.
- Carefully read all available instructions.
- Use only the power cord and supply approved for the voltage for the Hygro Max.
- Replace the power cord if the insulation is damaged or if the insulation shows any signs of wear.
- Make sure the ground conductor in the power cord is connected to a functioning ground.
- Disruption of the ground could put voltage on the chassis that could cause death.
- Use the Hygro Max only as specified, or the protection supplied by the Product can be compromised.
- Do not put the Hygro Max where access to the power cord isn't possible.
- Immediately cease using and disable the Hygro Max if it is damaged.
- Do not use the Hygro Max if it operates in an incorrect way.
- Do not operate the Hygro Max with unit casing removed. Hazardous voltage exposure is possible.
- Use only specified GEO Calibration replacement parts.
- The Hygro Max may only be repaired by approved technicians.
- The Hygro Max reservoir must be completely emptied before shipment.
- Do not use the Hygro Max around explosive gas, vapor, or in damp or wet environments.

# SAFETY WARNING

#### **Disposal Safety Information**

#### **European Union—Disposal Information**

The symbol above means that according to local laws and regulations your product and/or its desiccant shall be disposed of separately from household waste. When this product reaches its end of life, take it to a collection point designated by local authorities. The separate collection and recycling of your product and/or its desiccant at the time of disposal will help conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment.

### REPAIRS

#### **UNIT REPAIR PROCEDURE**

- Contact GEO Calibration and request an RMA #
- Have the Product information ready such as the purchase date and serial number to schedule the repair
- Ship the unit to GEO in the original shipping container or one designed specifically for "Safe Travel"
- Apply your RMA # on the outside of the shipping package in large numbers
- Apply the top right portion of your quotation with RMA # and barcode to the outside of the shipping package, so that it is visible
- Include a copy of all GEO communication documentation inside your package
- Estimated Return Ship-Date is 15 business days from the date both the unit and a valid method of payment is received
- On the Purchase Order, please ensure the "Vendor Name" is GEO Calibration Inc., and the address is 2190 Smithtown Avenue, Ronkonkoma NY 11779
- Payment Terms are "Immediate Payment" from Date of Invoice, FOB
  Origin, the respective Dollar Amounts, and any return shipping instructions
  are completed. (Please, do not send a copy of your internal "Purchase
  Requisition" as we need the actual "Purchase Order" with the above items
  included)
- Reference the RMA # on the completed PO and forward a copy via fax (631.471.6158) or email to: service@geocalibration.com
- If credit card is being used for payment and has not been provided as yet, please call +1 (631) 471 - 6157 and provide information; referencing your RMA # when you call
- \*\* Exception pricing may apply upon evaluation by the service center. If applicable, this will be presented in a formal re-quote before proceeding\*\*
- Please note that a "Payment Method" must be on file, reviewed and approved before any service work may begin on your item
- If you have any questions do not hesitate to call or email us.

Please ship the unit to: Attn: Repairs

GEO Calibration Inc.

2190 Smithtown Avenue Ronkonkoma, NY, 11779 The United States of America

# **MAINTENANCE**

### **SERVICE SCHEDULE**

#### GEO Recommendation

GEO Calibration recommends that the unit be annually shipped back to our facility for general maintenance.

Daily	Semi-Annual	As Needed
General Cleaning (Use Proper Cleaning Materials)	Control Probe Calibration	Refill Reservoir with Distilled Water
Ensure the Water Reservoir is Filled		Replace Desiccant Canister
Ensure the Ultrasonic Humidity Generator does not have scaling and is free of other detritus.		
Ensure the Desiccant Ports contain at least one fresh canister.		

### **ERROR CODES AND DESCRIPTIONS**

The Hygro Max displays error codes through the secondary display.

These are intended to communicate machine status to the user.

Error Code	Description
"No Analog Detected"	Internal Hardware Fault Detected
"Internal Probe Fail"	Internal Hardware Fault Detected
"No HumGen Temp"	Temperature probe failure.
"HumGen Low Limit"	The temperature of the ambient environment is too low for unit operation.
"HumGen High Limit"	The humidity generator has exceeded a high unit. Perform maintenance check of ambient environment and water supply.
"EEPROM Cfg Reset"	The unit configuration settings have been reset to factor default.
"EEPROM Cal Reset"	Factory calibration data reset to default.
	For questions, please contact GEO Calibration.

#### **Replacing the Desiccant**

#### Overview

The Hygro Max ships with 3 desiccant canisters that must be fresh to provide the user with optimal performance. The desiccant type is molecular sieve, which may be regenerated by the user through heating.

The user must replace the desiccant as soon as they see drying performance begin to degrade. To aid in this process, the Hygro Max has an on-screen indicator that displays once sub par performance is detected.

#### Instructions

## 1. Remove the Desiccant Cap

Turn the desiccant cap counter clock-wise until it pops off of the enclosure with surprising force.

### 2. Remove Used Desiccant

### 3. Insert New Desiccant

The end with the nub must be facing the technician.

## 4. Firmly Press the Desiccant

This ensures a proper seal is formed between the desiccant canister and the Hygro Max.

## 5. Re-Attach Desiccant Cap

Press firmly while aligning the nubs. Once the cap is flush with the face of the unit, turn it clockwise to seal.

#### **CONDENSATION**

### 1. Power Off the Unit

Ensure that the unit is powered off. This is so that no desiccant is wasted while the unit is not in operation.

## 2. Open the Chamber Door

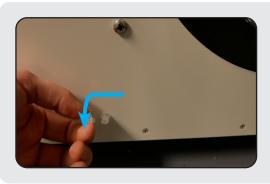

Follow the door opening procedure from the quick start guide.

## 3. Remove All Chamber Inserts

Remove any chamber inserts. Clean all condensation with an absorbent cloth such as a paper towel or bath towel.

#### **DRAINING THE UNIT**

### 1. Locate the Main Drain Port

Turn the cap counter-clockwise to remove.

## 2. Move the Unit to Table Edge

Position a bowl shaped object underneath the unit to catch the drained water.

## 3. Remove the Drain Cap

Tilt the unit to ensure maximum water removal.

## 4. Replace & Tighten Drain Cap

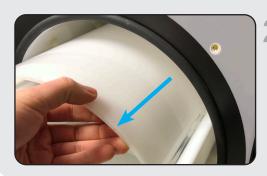

Tighten the drain cap in a clockwise motion. Ensure that the drain cap has a tight seal and no water is leaking.

### **PROBE REMOVAL**

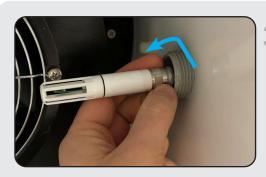

## 1. Open Chamber Door

Turn the screws counter-clockwise to loosen. Remove the door.

### 2. Remove Chamber Insert

## 3. Loosen Metal Connector

Twist towards the chamber opening to loosen.

## 4. Remove Probe Head

#### PROBE REPLACEMENT

### **1** Locate Probe Connector

### 2. Press Probe into Connector

Slowly rotate the probe head as you press into the cabling body. You will feel the probe "seat" itself once the male - female parts align.

## 3. Secure Metal Connector

Twist the metal connector away from the chamber entrance to secure the probe head to the probe cabling body.

## **HYGRO MAX DESICCANT SYSTEM**

#### **System Overview**

The Hygro Max desiccant system comprises of three chambers. Each cylinder supports GEO Calibration brand desiccant canisters that are filled with Drierite Anhydrous CaSO4 molecular sieve desiccant.

The Hygro Max's unique design allows technicians the freedom to walk away from the humidity generator without worrying that the desiccant will run out and interrupt their calibration routine.

Each desiccant cell operates on its own isolated valve, meaning canisters can be "hot-swapped" out without interrupting any running calibration routines.

LEDs above each cylinder indicate the status of each desiccant to the user.

#### **Desiccant - LED Status Indications**

When powered, the Hygro Max will indicate the status of each desiccant cylinder via a pair of LEDs. Each LED has the following settings

Solid On

- Indicates that the desiccant is good

Flashing

- Indicates that the desiccant is in use

OFF

- Indicates that the desiccant is bad and needs to be replaced.

#### **USING A CHILLED MIRROR PROBE**

### **1** Locate Probe Connector

### 2. Press Probe into Connector

Slowly rotate the probe head as you press into the cabling body. You will feel the probe "seat" itself once the male - female parts align.

## 3. Secure Metal Connector

Twist the metal connector away from the chamber entrance to secure the probe head to the probe cabling body.
