IMPORTANT NOTE: This instrument is manufactured and calibrated to meet product specifications. Please read this manual carefully before installation and operation. Any unauthorized repairs or modifications may result in a suspension of the warranty.

Available in Adobe Acrobat pdf format
CONNECTIONS:

POWER INPUT: The standard model requires AC power input between 100 to 240 VAC 50/60Hz. No adjustments are necessary for voltages within this range.

Optional DC: 9-32 VDC. Connect to + and - terminals.

Optional Thermostat and Heater modules are available rated for 115 VAC or 230 VAC.

IMPORTANT NOTE: To comply with CSA/UL electrical safety standards, AC power input and relay connection wires must have conduit entry to the instrument enclosure. Installation requires a switch, overcurrent fuse or circuit breaker in the building (in close proximity to the equipment) that is marked as the disconnect switch.

⚠️ Risk of electric shock. Loosen cover screw to access connections. Only qualified personnel should access connections.

Note: Use of instrumentation over 40°C ambient requires special field wiring.

Note: User replaceable fuse is 2 Amp 250V (T2AL250V).
KEYPAD SYSTEM

The OCF 5.0 uses a menu system. Arrows show the four directions to leave a menu box. Press a key to move to the next item in the direction shown. Move the cursor (highlighted) under numerals and increase or decrease numerals with the ↑ and ↓ keys.

To store calibration values permanently (even through power interruptions), press ✓.
**ICONS**

1. **Message waiting. Press ‼.**
2. **Data logging off.**
3. **Data logging on.**
4. **USB file download.**
5. **File download completed.**
6. **Download Error.**
7. **Echo OK.**
8. **No Echo.**
MAIN DISPLAY

The main display shows the units selected from the Units/Mode menu, Level, Range, Flow, HRT, and Volume rate being measured, TOTALIZER and RELAY states. The OCF 5.0 will start-up with this display.

MESSAGE ICON

Press \( \uparrow \) from the main display to view status of the data logger and error/warning messages provided by the instrument. The Message Icon will appear on the main display if error messages are being generated by the instrument. Refer to the manual section Error/Warning Messages for a description. Press \( \checkmark \) to return to the main display.

STATUS

Press \( \downarrow \) from the main display to view instrument status. Range will be displayed in linear units.

- Tot Displays the current totalizer reading.
- EC Displays echo confidence.
- Relays Energized relays will display as a white character on a black background.

24 HR LOG

Press \( \leftarrow \) from the main display to view a formatted flow report from instruments with a built-in data logger. Press \( \downarrow \) to scroll down one day or repeatedly to scroll to a specific date. Up to 365 days can be stored. Newest date will overwrite the oldest. Press \( \checkmark \) to return to the main display.
**PASSWORD**

The **Password** (a number from 0000 to 9999) prevents unauthorized access to the **Calibration** menu.

From the Main display press **** to get to **Password**. Factory default password is 0000 and if it has not been changed press the **✔** to proceed to the **Menu Selections** screen.

If a password is required, press **** to place the cursor under the first digit and **▼** or **▲** to set the number, then **** to the second digit, etc. Press **** or **✔** to proceed to the **Menu Selections** screen.

A new password can be stored by going to **Special Functions/New Password**.
### UNITS/MODE

From Mode press the ◇ and then the ↑ or ↓ to select Level, Range, Flow, HRT or Volume.

**Range** displays distance from the sensor to the target or liquid surface like a tape measure. Range mode is useful to measure the exact distance from the sensor to the zero level during calibration.

**Level** used to measure tank level in linear units, or "Head" in an open channel for comparison with flow tables.

**Volume** displays tank inventory in engineering units.

**HRT** select Horizontal Round Tank mode to calculate and display volume units in a horizontal round tank.

**Flow** calculates open channel flow through a flume or weir.

**Volume, HRT or Flow** gives the additional choice of volumetric units:

- ft³ (cubic feet)
- USG (US gallons)
- USMG (US million gallons, only for Flow)
- IG (Imperial gallons)
- IMG (Imperial million gallons, only for Flow)
- m³ (cubic meters)
- L (liters)
- bbl (U.S. oil barrel)

Press ◇ to store the selection, then ↓ to the next menu item and ◇ to enter.

**Linear** press ◇ and then ↑ or ↓ to select units of measurement. Press ◇ to store the selection.

**Time** press ◇ and then ↑ or ↓ to select day, hr, min or sec.

**Temperature** press ◇ and then ↑ or ↓ to select C or F (Centigrade or Fahrenheit).

Press ◄ or ◇ to return to the Menu Selections screen.
CALIBRATION

Press \( \downarrow \) to Calibration and \( \uparrow \) to enter. Use \( \downarrow \) or \( \uparrow \) to position \( \uparrow \) before each menu item and \( \rightarrow \) to enter. When settings are completed press \( \checkmark \) to store and return to the Calibration menu.

Min Range Distance from the sensor face to highest expected level.

Max Range Distance from sensor to Zero level.

MaxVol For Volume and HRT mode only. Enter the maximum volume of the vertical or horizontal tank.

Damping Minimum damping allows fast response to level changes. Increasing damping slows the OCF 5.0’s response to level changes and is ideal to smooth the display and outputs in turbulent conditions. Damping value is shown in percent (0-99%). Some experimentation may be required to select the optimum damping value. A value of 1% is recommended for most applications and for fast level changes (up to ½ inch/sec - 13 mm/sec).

LOE Time Press \( \uparrow \) and \( \downarrow \) or \( \downarrow \) to change the number of seconds without receiving an echo before the OCF 5.0 displays ECHO LOSS, and Control relays change state as calibrated under Relay Parameters.

Factory default is 30 seconds and is recommended for most applications, Minimum is 1 second and maximum is 99 seconds.

Press \( \checkmark \) to return to Menu Selections.
CALIBRATION
- for Open Channel Flow

1. Before starting the calibration determine:
   
   a) MAX RANGE = ____________________
      (Maximum range = distance from the Sensor to Zero flow point)
   
   b) MAX LEVEL = __________________
      (Maximum level of flow through flume or weir)
   
   c) MIN RANGE = __________________
      (Distance from sensor to Max Level)
      Minimum range = MAX RANGE - MAX LEVEL
      (must be at least 8" / 20.3 cm depending on sensor model).

2. Check the maximum range with the sensor installed by:
   
   a) When liquid is at zero level press ‼️ to view the Range reading in the Status menu. Use this range measured by the OCF 5.0 as the Max Range setting.
   
   or
   
   b) Carefully measure distance from sensor to zero level with a tape measure, and use this measurement as the Max Range setting.

   NOTE: The OCF 5.0 will not detect targets beyond user entered Max Range.

RELAY PARAMETERS

**Relay**
Press ↑ and ↓ or ⬆ to select a relay (2 relays are standard, 4 additional are optional).

**Function**
Press ↓ or ↑ to select Off, Temperature, Pulse or Flow.

**Temperature**
Air temperature at the sensor location. Press ↓ and ↑ and set the relay On and Off for specific temperatures.

**Pulse**
Press ↓ and set digits to the flow volume increment required between relay pulses. Use this feature for remote samplers, chlorinators or totalizers. Minimum time between pulses is 2.25 seconds and pulse duration is 350 milliseconds.

**Flow**
Press ↓ to Mode and ↑ to select Pump, Low Alarm or Hi Alarm.

Note: Function setting Flow will change according to selections made under Units/Mode eg Level, Range, Volume or HRT.

Press ⬆ to return to Menu Selections.

**LOE**
Set relay state for ‘echo loss’ event (On, Off or Hold)

**Alternate**
Pumps can be set to alternate when in pump mode.
DATA LOGGING

Setup

Select Data Logging from Menu Selections.

Log Site ID

Enter a number from 00 to 99. The site ID will become part of the downloaded file name to help distinguish downloads from different instruments. Press ✓ to store the setting.

Mode

Select Level, Range, Flow, HRT and Volume. Flow (e.g. USGPM or l/sec). Press ✓ to store the setting.

Set Date

Press ↑ or ↓ to scroll and select Month, Day and Year. Press ✓ to store the setting.

Set Time

Press ↑ or ↓ to select the current time in Hours, Minutes and Seconds. Press ✓ to store the setting.

Interval

Press ↑ or ↓ to select the logging interval. Flow rate reading will be stored at each time interval. Press ✓ to store the setting.

Note: Press ↓ to Log ◀ and ↑ or ↓ to Delete and ✓ to delete the log file. Press ◀ and ↑ or ↓ to Start and ✓ to restart the logger.

Log

Stop, Start or Delete the log file. Delete old file and start a new log to apply any changes that have been made to the Log Site ID, Mode or Interval.

RETRIEVE LOG FILE

Plug a USB Flash Memory Drive (not supplied by Greyline) into the USB output cable from the instrument. The instrument display will show the USB file download icon until the log file is transferred to the memory card and then display file download completed icon. The USB flash drive may be removed.

Download file names will appear in this format:

OCF_ _00A.LOG

MODEL TAG DOWNLOAD
Tag is set according to the Log Site ID entered in the instrument Data Logging menu.

Download letter will be A for the first download from an instrument. B for the second, then C etc. At the letter Z a - character will appear indicating that the maximum number of downloads for that instrument are on the USB flash drive. Older files can be erased or moved from the flash memory drive or a new memory drive can be used.

**OPENING LOG FILES**

Install Greyline Logger on your PC or laptop. Refer to the Help menu in the program for detailed instructions.

Select File/Open/Instrument Log (.log) to open the log file from your USB flash drive.
---Special Functions---
Language: English
Analog Out: 4-20mA
Backlight: High
Reset Totalizer: NO
Restore Defaults: NO
New Password: 0000

---Special Functions---
Language: English
Backlight: High
Medium
Low
Key Hi/Lo
Key High
Key Med
Key Low
Off

**SPECIAL FUNCTIONS**

**Language**
Select English, French or Spanish and press ✓.

**Analog Out**
Select 4-20mA or 0-5V mode for the analog output.

**Backlight**
Select High, Medium or Low for continuous backlight.

Select Key Hi/Lo for high backlight (for 1 minute) after a keypress and then Lo backlight until a key is pressed again.

Select Key High, Med or Low for backlight after a keypress and then backlight off until a key is pressed again.

**Reset Totalizer**
Press ✓ and select Yes to erase and restart the totalizer at zero.

**Restore Defaults**
Select Yes and press ✓ to erase all user settings and return the instrument to factory default settings.

**New Password**
Select any number from 0000 to 9999 and press ✓. Default setting of 0000 will allow direct access to the calibration menus. Setting of any password greater than 0000 will require the password to be entered to access the calibration menus.

Press ✓ to return to Menu Selections.
SIMULATION

Exercises the 4-20mA (0-5V) output, digital display and control relays.

Test Select Maximum and press ✓ to simulate maximum Flow, Range or Level and to output 20mA (5V) to the analog channel.

Select Minimum and press ✓ to simulate minimum Flow, Range or Level and to output 4mA (0V) to the analog channel.

To simulate an intermediate Flow, Range or Level set Test to Actual and then enter a value for the Flow, Range or Level. The analog output and control relays will respond to the simulated value.
SENSOR MOUNTING METHODS

Notes:
1. Use the ¾" NPT "Isolation Coupling" supplied and hand tighten only. Do not clamp sensor body or stem.
2. Locate the sensor 1 ft (30 cm) from the sidewall or obstruction for every 10 ft (3 m) depth.
3. Do not mount in direct sunlight.
4. Extend sensor cable up to 500 ft (150 m) with RG62AU coaxial only.

CROSS BAR MOUNT

FLANGE MOUNT

CONDUIT MOUNT

STAND PIPE MOUNT

ANGLE MOUNT

Notes:
1. Use the ¾" NPT "Isolation Coupling" supplied and hand tighten only. Do not clamp sensor body or stem.
2. Locate the sensor 1 ft (30 cm) from the sidewall or obstruction for every 10 ft (3 m) depth.
3. Do not mount in direct sunlight.
4. Extend sensor cable up to 500 ft (150 m) with RG62AU coaxial only.
SENSOR MOUNTING/LOCATION
- Open Channel Flow Applications

Each sensor is equipped with a 3/4 inch isolation coupling which MUST be used in your installation. A threaded nipple or length of conduit may be used to position the sensor at the desired height. The sensor should be hand-tightened by turning the sensor stem only. DO NOT use a wrench and do not over tighten.

IMPORTANT: Follow the flume manufacturer’s directions for sensor location. The sensor should be centered above the flume approach section and mounted 8"/203 mm (minimum) above the maximum liquid level (depending on sensor model).

The sensor should be protected from physical damage and the sensor cable should be routed in a separate metal conduit.

Because the sensor is equipped with a temperature sensor, it should be shielded from direct sunlight.

Use the PVC “isolation coupling” supplied with the sensor and hand-tighten the sensor/coupling assembly onto your mounting stand. Do not clamp directly to the sensor or to the isolation coupling.
Always refer to the flume or weir manufacturer’s instructions for correct measurement point upstream from the flume or weir. Location of the sensor is critical for accurate flow measurement.

If manufacturer’s instructions are not available, the following guidelines are generally accepted.

1. PARSHALL FLUME:

Position the sensor at 2/3 Approach as illustrated above. Sensor height must be 8" (203 mm) or more above the highest water level.

2. PALMER BOWLUS FLUMES:

Position the sensor at ½ the flume Diameter upstream from the throat of the flume. Sensor height must be 8" (203 mm) or more above the highest water level.

3. V-NOTCH WEIRS

Position the sensor at 3 x maximum Head upstream from the weir plate. Sensor height must be 8" (20.3 cm) or more above the highest water level.

STILLING WELLS

Stilling wells are recommended to reduce the effects of turbulence as water flows through the flume or weir. The OCF 5.0 sensor is centered over the stilling well. Sensor height must be 8" (203 mm) or more above the highest water level. The well must be kept clean of sediment and deposits on the side walls.
ZERO POSITIONING OF SENSOR
- Open Channel Flow Applications

Locate the sensor at the position upstream from the throat of the flume or weir plate as recommended by the manufacturer. A technique for accurate sensor height adjustment is shown:
ENCLOSURE INSTALLATION

Locate the enclosure within 20 ft (6 m) of the sensor (500 ft -150 m optional). The enclosure can be wall mounted with the four mounting screws (included) or panel mounted with Option PM Panel Mount kit from Greyline Instruments.

Avoid mounting the enclosure in direct sunlight to protect the electronics from damage due to overheating and condensate. In high humidity atmospheres, or where temperatures fall below freezing, Option TH Enclosure Heater and Thermostat is recommended. Seal conduit entries to prevent moisture from entering enclosure.

NEMA4X (IP66) WITH CLEAR COVER

1. Open hinged enclosure cover.

2. Insert #8 screws (supplied) through the four enclosure mounting holes to secure the enclosure to the wall or mounting stand.

Additional conduit holes can be cut in the bottom of the enclosure when required. Use a hole saw or Greenlee-type hole cutter to cut the required holes.

DO NOT make conduit/wiring entries into the top of the enclosure.

Note: This non-metallic enclosure does not automatically provide grounding between conduit connections. Grounding must be provided as part of the installation. Ground in accordance with the requirements of the National Electrical Code. System grounding is provided by connecting grounding wires from all conduit entries to the steel mounting plate or another point which provides continuity.

CLEANING

Cleaning is not required as a part of normal maintenance.
ERROR/WARNING MESSAGES

ECHO LOSS
No valid echoes received within the LOE TIME setting. The OCF 5.0 will hold the display and outputs at the last reading until a new echo is received.

- or -
Your choice of Units exceeds 9,999,999. Use USMG/d, IMG/d or m3/d so that Units will be 9,999,999 or less

ECHO TOO CLOSE
Indicates that the target is less than Min Range distance from the sensor (too close to the sensor).

SENSOR OPEN
Instrument has detected sensor connection/cable Open.

SENSOR SHORTED
Instrument has detected sensor connection/cable Shorted.
### FIELD TROUBLESHOOTING

#### SYMPTOMS  |  FAULTS  | SOLUTIONS

**Unit “See’s” Wrong Target Due To:**

A - sensor cover not removed  
- remove protective cover after installation

A,C,D,F - sensor not aimed correctly  
- clean carefully (do not scratch sensor face)

A,D,F - dust/dirt buildup on sensor  
- lower Sensor

A,D,F - condensation on sensor  
- insulate sensor mounting location

A,D - sensor mounting stand pipe  
- increase Min Range (CALIBRATION menu) by 1-3” / 2.5-7.5 cm

A,D - sensor mounting stand pipe  
- lower Sensor below stand pipe intrusion

- dirty / - gasket intruding

C,E - very turbulent flow in open channel  
- increase Damping (CALIBRATION menu)

C,E - very turbulent level in tank  
- install stilling well on flume or weir

C,E - very turbulent level in tank  
- increase Damping (CALIBRATION menu)

C,E - very turbulent level in tank  
- change tank fill method

**Unit Picks-Up Interference Due To:**

A,C - noise from high pressure fill  
- install submerged fill pipe

A,D - sensor coupling over tightened  
- hand tighten only (like a light bulb)

A,D - sensor coupling not used  
- use coupling supplied

C - other ultrasonic unit in close proximity  
- synchronize

**Electrical interference:**

C - sensor cable connections reversed  
- use properly grounded metal conduit

C - through sensor cable  
- use properly grounded metal conduit
C - sensor cable extended and junction not insulated
- Use metal Junction Box
C - through enclosure
- use metal enclosure
C - through 4-20mA output cable
- use shielded twisted pair (shielded to AC ground)
- use grounded metal conduit
C - wiring or installation close to variable speed drive or inverter
- follow V.S.D. manufacturer’s instructions for Drive grounding, wiring and shielding

Unit Receives No Return Echo Due To:
C,F,E - foam on liquid surface
- use stilling well (open channel flow)
B - target beyond Max Range
- recalibrate
F - sensor damaged
- remove sensor from mounting and aim at a flat, stable target to test
F - sensor misalignment
- check with a level

Wiring Problems Due To Sensor Cable:
A,C,F - open circuit
- check connections/continuity (8850 to 12700 ohms max./-30°C to +70°C )
B,F - short circuit
- check connections/continuity (8850 ohms min.)
F - too long (max 500 ft., 150 m)
C - bundled/run in conduit with power cable
C - sensor ground shorted to conduit/enclosure
- insulate
A - extended with wrong type of wire
- use RG62A/U coaxial only
C - close to high voltage/large motors
C - AC chassis/ground missing on instrument power connections

Non-Linearity Due To:
H - vapour
- dissipate fumes, Calibration in-situ
H - zero not set accurately
- see “Zero Positioning of Sensor”
H - wrong flume, or K&n selected (FLOW mode)
- select correct flume
- temperature measurement inaccuracy
- install sensor sunscreen
- mount sensor closer to flow
PZxx Series Sensors

Troubleshooting

Resistance measured (between the shield and center wire) across the coaxial cable ends by multimeter indicates ambient temperature.

**FUSE REPLACEMENT**

1. Turn OFF power.
2. Loosen cover screw and open.
3. Remove power module.
4. Locate fuse on Power Board.
5. Replace fuse with 2 AMP/250V, 5 x 20mm fuse.
6. Reinstall power module into chassis.

16456 Sixsmith Drive
Long Sault, Ont.  K0C 1P0

USA:
105 Water Street
Massena, NY 13662
PRODUCT RETURN PROCEDURE

Instruments may be returned to Greyline for service or warranty repair.

1) Obtain an RMA Number from Greyline -
Before shipping a product to the factory please contact Greyline by telephone, fax or email to obtain an RMA number (Returned Merchandise Authorization). This ensures fast service and correct billing or credit.

When you contact Greyline please have the following information available:

1. Model number / Software Version
2. Serial number
3. Date of Purchase
4. Reason for return (description of fault or modification required)
5. Your name, company name, address and phone number

2) Clean the Sensor/Product -

*Important: unclean products will not be serviced and will be returned to the sender at their expense.*

1. Rinse sensor and cable to remove debris.
2. If the sensor has been exposed to sewage, immerse both sensor and cable in a solution of 1 part household bleach (Javex, Clorox etc.) to 20 parts water for 5 minutes. Important: do not immerse open end of sensor cable.
3. Dry with paper towels and pack sensor and cable in a sealed plastic bag.
4. Wipe the outside of the enclosure to remove dirt or deposits.
5. Return to Greyline for service.

3) Ship to Greyline -

After obtaining an RMA number please ship the product to the appropriate address below:

<table>

RMA#  RMA#
LIMITED WARRANTY

Greyline Instruments warrants, to the original purchaser, its products to be free from defects in material and workmanship for a period of one year from date of invoice. Greyline will replace or repair, free of charge, any Greyline product if it has been proven to be defective within the warranty period. This warranty does not cover any expenses incurred in the removal and re-installation of the product.

If a product manufactured by Greyline should prove defective within the first year, return it freight prepaid to Greyline Instruments along with a copy of your invoice.

This warranty does not cover damages due to improper installation or handling, acts of nature, or unauthorized service. Modifications to or tampering with any part shall void this warranty. This warranty does not cover any equipment used in connection with the product or consequential damages due to a defect in the product.

All implied warranties are limited to the duration of this warranty. This is the complete warranty by Greyline and no other warranty is valid against Greyline. Some states do not allow limitations on how long an implied warranty lasts or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Greyline Instruments Inc.
APPENDIX A - OPTIONS

EXTRA SENSOR CABLE - OPTION XC

Each Greyline level instrument includes 25 ft. (7.6 m) RG62AU coaxial cable. Additional RG62AU coaxial cable and Cable Junction Box (Option JBX) may be installed to extend cable up to 500 ft (152m) as required during installation. No adjustment is required when the sensor cable is extended or shortened. Use only RG62AU (or RG62U) coaxial cable which is available from Greyline Instruments or your local distributor. Nominal impedance of RG62AU cable is 93 ohms.

Extended sensor cable maybe installed in metal or plastic conduit. Recommended installation with a junction box is illustrated below:

![Diagram of sensor cable and junction box]

JUNCTION BOX - OPTION JBX

NEMA4X (IP66) polycarbonate Junction Box with terminal strips is available from Greyline Instruments. Includes compression fittings for watertight coaxial cable entries.

CONDUIT TO ELECTRONICS

Wetwell, Sump or Pump Station
SENSOR INTRINSIC SAFETY
(OPTION ISB)

When connected through Intrinsic Safety Barriers, Greyline PZ** Series sensors are certified for installation in a hazardous location rated:

- Class I, Groups C,D
- Class II, Groups E,F,G
- Class III

The Intrinsic Safety Barrier may be ordered with the Greyline instrument and is supplied mounted in the Greyline instrument enclosure. Replacement barrier fuses (Part No. ISB- 011239) may be purchased separately. The instrument enclosure containing the ISB Intrinsic Safety Barrier must be installed in a non-hazardous location.
The intrinsic safety barrier assemblies installed in the OCF 5.0/SLT 5.0/PSL 5.0 limit the voltage and current supplied to the transducers to the values listed under 'Barrier Specifications'. To safely install a Greyline transducer certified for use in hazardous locations you must refer to the installation drawings/specifications of the certified transducer.

ENCLOSURE HEATER AND THERMOSTAT - Option TH

Instruments can be factory-equipped with an Enclosure Heater and Thermostat or the module can be customer-installed. The Thermostat is factory set to turn ON at 40°F (4.5°C) and OFF at 60°F (15.5°C). Power consumption is 15 Watts.

ENCLOSURE SUNSCREEN - Option SCR

Do not mount instrument electronics in direct sunlight. Overheating will reduce the life of electronic components and condensate may form during the heat/cool cycles and cause electrical shorts.

Note:

Exposure to direct sunlight can cause overheating and moisture condensation which will reduce the operating life of electronics.

Protect Instruments from direct sunlight with this iridite finished aluminum sun screen (Greyline Option SCR).

Seal conduit entries with caulking compound to further reduce moisture condensation.
POWER INPUT OPTION
9-32VDC

OCF 5.0 Level & Flow Monitors may be ordered factory-configured for 9-32VDC power input.

QUICK BENCH TEST:

Connect Sensor as shown below, then Power. When properly connected figures will show on the large LCD display. Test operation of the OCF 5.0 by holding the sensor steadily and aiming at a flat, stable target 12 to 28" (305 to 711 mm) away from the end of the sensor. Allow a few seconds for the OCF 5.0 to lock onto the target before displaying its distance. The OCF 5.0 will now display Range in ft or cm (factory calibration).

CONNECTIONS:

POWER INPUT: Connect 9-32VDC/0.5 Amps to the + and - terminals. The Power Input GND must be connected to the nearest Ground pole. A 1 amp fuse in line is recommended.

**Volume Calculation for Round Tanks:**

\[ 3.142 \times R^2 \times H \]

- \( R \) = Tank Radius (½ Tank Diameter)
- \( H \) = Tank Height
**SPECIFICATIONS**

**Accuracy:** ±0.25% of Range or 2 mm, whichever is greater Repeatability and Linearity: 0.1% F.S.

**Displays:** White, backlit matrix - displays flow rate, totalizer, relay states, operating mode and calibration menu

**Calibration:** built-in 5-key calibrator with English, French or Spanish language

**Power Input:** 100-240VAC, 50/60Hz, 30 Watts or 9-32VDC, 9 Watts max

**Output:** Isolated 4-20mA (1000 ohm load max.)

**Control Relays:** Qty 2, rated 5 amp 240VAC SPDT, programmable flow alarm and/or proportional pulse

**Enclosure:** watertight, dust tight NEMA4X (IP 66) polycarbonate with a clear shatter-proof face

**Environmental Conditions:** Relative humidity up to 80% -23 to 60°C ambient temperature, maximum 5000 m altitude, pollution degree 4, Installation Category II.

**Sensitivity:** adjustable. Damping: adjustable

**Electrical Surge Protection:** Sensor, 4-20mA output and AC power input

**Approximate Shipping Weight:** 10 lbs (4.5 kg)

**Standard Sensor PZ15**

- **Maximum Range:** 15 ft (4.57 m)
- **Minimum Range (Deadband):** 8” (203.2 mm)
- **Operating Frequency:** 92 KHz
- **Beam Angle:** 8°
- **Operating Temperature:** -40° to 150° (-40° to 65°C)
- **Temperature Compensation:** Automatic, continuous
- **Max. Operating Pressure:** 20 psi (1.35 bar)
- **Sensor Face:** PVC
- **Sensor Body:** PVC
- **Mounting:** ¾” NPT
- **Cable Length:** 25 ft. (7.6 m) continuous RG62AU coaxial. Optional 50 ft. (15 m) continuous
- **Max. Cable Length:** 500 ft. (152 m) RG62AU coaxial (splice)
- **Hazardous Rating:** CSA rated Intrinsically Safe Class I, Groups C,D, Class II, Groups E,F,G with Optional Intrinsic Safety Barrier.
**Optional Sensor PZ32T**

- **Maximum Range:** 32 ft. (10 m)
- **Deadband (blanking):** Programmable, minimum 12" (305 mm)
- **Beam Angle:** 8° at 3 DB
- **Temperature Compensation:** Automatic, continuous
- **Operating Frequency:** 42 KHz
- **Exposed Materials:** PVC and Teflon
- **Operating Temperature:** -40° to 150°F (-40° to 65°C)
- **Operating Pressure:** 20 psi (1.35 Bar) maximum
- **Mounting:** ¾” NPT (PVC isolation coupling supplied)
- **Sensor Cable:** RG62AU coaxial, 25 ft. (7.6 m) standard
- **Hazardous Rating:** with optional Intrinsic Safety Barrier: CSA, Class I,II,III, Div. I,II, Groups C,D,E,F,G
  Note: Max Range reduced to 25 ft (7.6 m) with ISB option.

---

**Optional Sensor PZ32TE**

- **Maximum Range:** 32 ft. (10 m)
- **Deadband (blanking):** Programmable, minimum 12" (305 mm)
- **Beam Angle:** 8° at 3 DB
- **Temperature Compensation:** Automatic, continuous
- **Operating Frequency:** 42 KHz
- **Exposed Materials:** Teflon
- **Operating Temperature:** -40° to 170°F (-40° to 76°C)
- **Operating Pressure:** 20 psi (1.35 Bar) maximum
- **Mounting:** ¾” NPT (Teflon isolation coupling supplied)
- **Sensor Cable:** RG62AU coaxial, 25 ft. (7.6 m) standard
- **Hazardous Rating:** with optional Intrinsic Safety Barrier: CSA, Class I,II,III, Div. I,II, Groups C,D,E,F,G
  Note: Max Range reduced to 25 ft (7.6 m) with ISB option.
