VibVue® Version 4.1

Capture Vibrations at *Warp Speed* - Motion Magnification Kit

Struggling to detect high-frequency vibrations using costly high-speed cameras? VibVue® 4.1 changes everything. Powered by the exclusive Warp Speed high-frequency engine, VibVue® 4.1 Pro transforms standard cost-effective cameras into powerful diagnostic tools, capable of capturing ultra-high-frequency vibrations without sacrificing resolution.

This breakthrough eliminates frame-rate barriers, enabling sharper Motion Magnification videos and precise vibration analysis, right where you need it. Now, you can diagnose faster, see more, and spend less, without compromising performance.

VibVue® Lite Kit: Tools to Get Started

- VibVue® Camera (monochrome or color)
- VibVue® Lite + Analysis Lite software licenses
- **1 day hands-on training** for 2 people at MSI HQ or half-day remote session
- **1 year of software updates**, MSI's expert project review, and tech support included
- Four precision lenses (6mm, 12mm, 25mm, 50mm)
- High-performance laptop
- Flicker-free LED light + stand
- Camera tripod + quick connector
- Laptop tripod stand
- Laser distance meter
- Vibration-dampening tripod pads
- Accessories: high-speed cables, lens case, lens cloth, sun hood
- Durable Pelican™ travel case

VibVue® Pro Kit: Full Power, Full Capability

Includes all hardware in the Lite Kit, plus:

- Upgrade to VibVue® Pro + Analysis Pro licenses
- **Warp Speed** – uncapped frequency detection
- **Modal Analysis** (trigger kit sold separately)
- **Live Analysis** – real-time diagnostics
- **Automated report generation** (.PPT, .XLSX, .PDF)
- Vibration standard chart overlays (ISO 10816, Energy Institute)
- Advanced time-domain filter settings (passband/stopband)
- Early access to new Pro-exclusive features
- **1 day of hands-on training** for up to 4 people at MSI HQ or remote session

Diagnose Vibration & Dynamic Problems that Cost You Time and Money

Key Technical Advantages

- Detect vibrations >10,000 Hz (600,000 CPM) at full resolution with Warp Speed*
- Industry-best detection threshold at practical distances (*0.1 mil displacement at 10 ft. field-of-view*)
- 1920x1200 (2.3MP) resolution for wide-area machine coverage
- Motion Magnification > 1,000x
- High-speed video for standard and high-frequency cameras*
- Crisp, natural-looking Motion Magnification videos
- Built-in tools for video customization, export, reporting
- 1 year of software updates, MSI's expert project review, and tech support included

* VibVue® Pro only

* VibVue® Standard Camera: (156fps @ 1920x1200, 312fps @ 1920x600)

* VibVue® High-Frequency Camera: (1480fps @ 1920x1080, 3290fps @ 640x480)

Optional Add-Ons

- High-Intensity Light Kit (22,000 lumen, AC-powered LED) + stand
- USB dongle license key
- VibVue® Modal Trigger Kit (USB or Hardware)
- VibVue® Modal Impact Hammer

Maintenance & Support Plan

- 1-year support plan included with Pro or Lite Kit
- Access to all software updates and new features
- Direct support from MSI engineers
- Complimentary expert reviews of VibVue® video data

Training

- Included for up to 2 people for Lite kit, 4 for Pro kit
- Flexible offerings: on-site, at MSI HQ, or over web conference
