

Model 225

Ultra High Purity Pressure Transducers

Features

- · Superior stability avoids downtime
- EMI/RFI immunity
- · Sturdy design allows trouble free installation
- Optional ETL ceryified as conforming to UL-1604 and ATEX 94/9/EC approval available for 4 to 20 mA output units
- · CE & RoHS compliant

Applications

- · Gas cabinets
- · High purity gas delivery systems
- Semiconductor process tools

Setra's Model 225 is ideally suited for high-purity gas delivery systems, semiconductor processes and control applications that require ultraclean operation, high throughput performance, and exceptional long-term stability.

Designed with a low cavity volume of 0.11 in³, virtually eliminating particle entrapment, the 225 can be easily purged. All wetted parts are 316L VIM/VAR stainless steel passivated to 5RA (7Ra max) finish, which eliminates surface irregularities and provides the proper surface chemistry for corrosion resistance, assuring contaminant free gas distribution. Every sensor is mass spectrometer helium leak tested 1 x 10-9 ATMCC/sec.

The model 225 series comes with a rotating cover easy access to 12-turn potentiometers for fine zero and span adjustment. Standard swivel male or female face seal pressure fittings meet the semiconductor industry requirements. In addition several other fitting styles are available.

Accurate variable capacitance

The Model 225 is offered with a 5 VDC, 10 VDC, or 4-20 mA output. A six-foot multiconductor cable or bayonet connector is provided for electrical termination. Setra's patented variable capacitance sensor features a VIM/VAR 316L stainless steel diaphragm and an insulated electrode plate. An increase in pressure causes a slight rounding of the diaphragm, which decrease the capacitance. The capacitance change is detected and converted to a highly accurate linear DC electric signal. Setra's unique custom integrated circuit, utilizes a patented charge balance principle and is virtually EMI/RFI immune. After manufacture and assembly Setra's ultra-high purity pressure transducers are flushed with deionized water, purged with high-purity heated nitrogen, baked, double bagged, backfilled with nitrogen, and sealed, prior to shipping.
