DIN-A-MITE® Style C
Solid-State Power Controller
User’s Manual

DIN-A-MITE Solid-State Power Controller

Please consult this user’s manual when you place your new DIN-A-MITE into service. It contains all the necessary information to mount and wire the product into the application. This manual also contains all user-pertinent specifications and semiconductor fusing recommendations. Refer to national and local electrical code safety guidelines whenever you install electrical equipment.

The Watlow DIN-A-MITE power controller includes single-phase, 3-phase, 2-leg, and 3-phase, 3-leg, 120 to 600V (ac) operation. Current switching capabilities range from 30 to 80A, depending on the model ordered. See the output rating curves.

Zero-cross variable time base or V<sub>dc</sub> (ac/dc) input contactor versions are available. Shorted SCR (silicon controlled rectifier) and open-heater protection is available on some zero-cross models. Phase angle and phase angle with current limit is also available on single-phase models. The model number indicates the power controller’s configuration.

The DIN-A-MITE power controller is designed and manufactured by Watlow in Winona, Minnesota.

1241 Bundy Boulevard, Winona, Minnesota USA 55987
Phone: +1 (507) 454-5300, Fax: +1 (507) 452-4507  http://www.watlow.com
Operator Interface
- Command signal input and indication light
- Alarm output and indication light
- Current limit indication LED

Amperage Rating
See the output rating curve chart on page 5 for all the natural convection, fan-cooled, and through-wall mount models.
- Ratings are into a resistive heater load
- Maximum surge current for 16.6 milliseconds, 1,350 A peak
- Maximum I²t for fusing is 9100 A²s
- Latching current: 500mA minimum
- Holding current: 200mA minimum
- Fan current: 0.14 A for 24V (dc); 0.12 A for 120V (ac); 0.06 A for 240V (ac)
- Off-state leakage 1mA at 25°C (77°F) maximum
- Power dissipation is 1.2 watts per amp switched per controlled leg.
- 200KA SCCR type 1 and 2 approved with the recommended fusing (see page 4)

Line Voltage
- 24 to 48V~ (ac) units: 20V~ minimum to 53V~ maximum
- 120 to 240V~ (ac) units: 48V~ minimum to 265V~ maximum
- 277 to 600V~ (ac) units: 85V~ minimum to 660V~ maximum

Alarms (zero cross models only)
- Shorted SCR Alarm Option
  - Alarm state when the input command signal is off and a 10 A or more load current is detected by the current transformer (two turns required for 5 A or three turns for 2.5 A).
- Open Heater Alarm Option
  - Alarm state when the input command signal is on and the load current detected by the current transformer is less than the alarm set point. Available with Input Control Signal option S only.

Alarm Output
- Energizes on alarm, non-latching
- Triac 24 to 240V~ (ac), external supply with a current rating of 300 mA @ 25°C (77°F), 200mA @ 50°C (122°F), 100mA @ 80°C (176°F) and a holding current of 200 μA with a latching current of 5mA typical.
- Agency Approvals
  - CE with proper filter:
    - EN 61326: Industrial Immunity Class A emissions
    - Not suitable for Class B environments.
    - EN 50178 Safety Requirements
      - Installation category III, Pollution degree 2
      - Phase angle and phase angle with current limit Input Control Signal Types (P and L) are not CE approved.
      - UL® 50 Type 4X Enclosure and UL® 1604 File E184390 (Through-wall heatsink mounting only)
      - UL® 508 listed and C-UL®, File E73741
      - Shock and vibration tested to IEC 60068-2-32
      - Vibration tested to IEC 60068-2-6

Input Terminals
- Compression: Will accept 0.2 to 1.5 mm² (24 to 16 AWG) wire
  - Torque to 0.5 Nm (4.4 in-lb) with a 3.5 mm (1/8 in) blade screwdriver
  - Wire strip length 5.5 mm (0.22 in)
- Line, Load and Ground Terminals
  - Compression: Will accept 2 to 21 mm² (14 to 4 AWG) wire
  - Torque after 48 hours to minimize wire cold flow.
  - Retorque line and load terminals every 3 to 6 months.
  - Wire strip length 11 mm (7/16 in)

Operating Environment
- See the output rating curve chart on page 5.
- 0 to 90% RH (relative humidity), non-condensing
- Storage temperature: -40 to +85°C (-40 to 185°F)
- Insulation only tested to 3,000 meters

DIN Rail Mount
- DIN EN 50022, 35 by 7.5 mm
- Minimum clipping distance: 34.8 mm (1.37 in)
- Maximum clipping distance: 35.3 mm (1.39 in)

Back Panel Mount
- Four mounting holes M4 (No. 8) fastener

Through-Wall Mount
- See page 8 for through-wall cutout

NOTE: Mount cooling fins vertically.

Weight
- 1.0 to 1.9 kg (2.2 to 4.2 lb) depending upon model

Specifications are subject to change without notice.
Additional Specifications for Contactors and Proportional Controls

Control Mode, Zero-Cross
- Input Control Signal Type C: V= (dc) input contactor.
  To increase service life, the cycle time should be less than 3 seconds.
- Input Control Signal Type K: V= (ac) input contactor.
  To increase service life, the cycle time should be less than 3 seconds.
- Input Control Signal Type F: 4 to 20mA= (dc) proportional variable time base control.

Input Command Signal
- AC contactor
  24V= ±10%, 120V= ±10%/-25%, 240V= (ac) +10%/25% @ 25mA maximum per controlled leg
- Do not use the DIN-A-MITE Vac-input models with a temperature controller that includes an RC snubber circuit across its output. Remove the RC snubber circuit before placing the DIN-A-MITE into service.
- DC contactor
  4.5 to 32V= (dc): maximum current @ 4.5V= (dc) is 6mA per leg. Add 2mA per LED used to the total current.
- Loop powered linear current
  4 to 20mA= (dc): loop-powered. Input Type F0 option only. (Requires current source with 6.2V= (dc) available. No more than three inputs connected in series.)

Linearity (Input Control Signal Type F)
- Full on point 19.5 to 19.9mA= (dc), maximum voltage of 6.2V peak.
- ±5% input to output power accuracy, 0% to 100% of span (4.3 to 19.7mA or 12.3 to 19.7mA).
- Temperature stability is less than 0.15%/°C change.

Operation
- Burst firing (zero-cross) control, single-cycle variable time base. Type S single-phase and 3-phase. Unit is not on for more than one full cycle under 50% power and not off for more than one full cycle above 50% power.
- Phase angle control, single-phase only

Input Command Signal
- 0 to 20mA, 4 to 20mA, 12 to 20mA, = (dc), 0 to 5V=, 1 to 5V=, and 0 to 10V=
- Input impedance 250 for 4 to 20mA, 5k for linear voltage input

Output Voltage
- 100 to 120V= (ac), 200 to 208V=, 230 to 240V=, 277V=, 400V=, 480V=, 50 or 60 Hz independent +/-5% (Input Control Signal Type L, P and S)

Phase Angle Accuracy
- Output on time is directly proportional to the command signal. Output on time is accurate to within 5% of the command signal input at 25 degrees C ambient. See chart below for command signal input to output power transfer function. Temperature stability at ambient temperature is less than 0.25%/degrees C.

Single Cycle VTB Accuracy
- Output power is directly proportional to the command signal. Output power is accurate to within 5% of the command signal input at 25 degrees C ambient. Temperature stability is less than 0.25%/degrees C ambient temperature change.

Soft Start
(Phase Angle Input Control Signal Type P and L)
Typically:
- 5 seconds soft start on power up
- Soft start on thermostat overtemperature
- Soft start on 1/2 cycle drop out detection
- 1 second soft switching on set point change

Options
- Manual Control Kit (1k potentiometer) 08-5362
- Alarm option is not available on phase angle type P or type L.

Resolution
- Better than 0.1% of input span with respect to output change.

Phase Angle Command Signal Input to Output Power

Additional Specifications: Phase Angle; Phase Angle Current Limit; & Single Cycle VTB
DIN-A-MITE C Ordering Information

To order, complete the code number on the right with the information below:

**Style C** solid-state power controller

**Phase**
- 1 = single-phase, 1 controlled leg
- 2 = 3-phase, 2 controlled legs
- 3 = 3-phase, 3 controlled legs (use with four-wire wye)
- 8 = 2 independent zones (input control C, K)
- 9 = 3 independent zones (input control C, K)

**Cooling and Current Rating Per Leg**
- 0 = Natural convection standard DIN rail or panel heatsink
- 1 = Fan-cooled 120V~ (ac) standard DIN rail or panel heatsink
- 2 = Fan-cooled 240V~ (ac) standard DIN rail or panel heatsink
- 3 = Fan-cooled 24V~ (dc) fan standard DIN rail or panel heatsink
- T = Natural convection through-wall or cabinet heatsink (UL 50)

**Line and Load Voltage**
- 02 = 24 to 48V~ (ac) (Input Control Signal C, F, or K only)
- 12 = 100 to 120V~ (ac) (Input Control Signal L, P or S only)
- 20 = 200 to 208V~ (ac) (Input Control Signal L, P or S only)
- 24 = 120 to 240V~ (ac) (Input Control Signal C, F or K only);
  230 to 240V~ (ac) (Input Control Signal L, P or S only)
- 27 = 277V~ (ac) (Input Control Signal L, P or S only)
- 40 = 400V~ (ac) (Input Control Signal L, P or S only)
- 48 = 480V~ (ac) (Input Control Signal L, P or S only)
- 60 = 277 to 600V~ (ac) (Input Control Signal C, F or K only);
  600V~ (ac) (Input Control Signal L, P or S only)

**Input Control Signal**
- C0 = 4.5 to 32V (dc) contactor
- K1 = 22 to 26V~ contactor
- K2 = 100 to 120V~ contactor
- K3 = 200 to 240V~ contactor
- F0 = Proportional 4 to 20 mA (loop powered)
- L(0 to 5) = Phase angle with current limiting (DC1 only, Alarm 0 only, includes one current transformer - Single phase only)
- P(0 to 5) = Phase angle (DC1 only, Alarm 0 only - Single phase only)
- S(0 to 5) = Single-cycle variable time base

**Alarm**
- 0 = No alarm
- S = Shorted-SCR alarm (not available on Phase options 8 & 9 or Control options L & P)
- H = Open-heater and shorted-SCR alarm (for Input Control Signal option S only)

**User Manual Language**
- 0 = English
- 1 = German
- 2 = Spanish
- 3 = French

**Custom Part Numbers**
- 00 = Standard part
- 1X = 1-second soft start (control option P, L)
- XX = Any letter or number, custom options, labeling, etc.

**Not CE compliant for conducted or radiated emissions**

**Note:**
- Recommended fusing options to meet 200KA SCCR, type 1 and 2 approved. All other fuse and SCR combinations are defaulted to 5KA SCCR per UL508A and NEC guidelines.
Output Rating Curves

DIN-A-MITE Style C Ratings at 100% On

Current (Amps) into a Resistive Load

Maximum Internal Enclosure Ambient Temperature (°C)

- Natural Convection
- Fan-Cooled

Extended Heater And SCR Life
With Variable Time Base

Models: DC _ _ - [02, 24, 60] F0 - _ _ _ _

20% Power, 3 AC line cycles on, 12 cycles off

50% Power, 3 AC line cycles on, 3 cycles off

With variable time base control, the power controller automatically adjusts the time base and output power with respect to process input. Accelerated life testing verified that the variable time base control significantly reduces expansion and contraction of the heater element. This extends heater and SCR life while improving the process temperature control. You save money on heaters, down time and maintenance.

Single-Cycle Variable Time Base

Models: DC _ _ _ S _ _ _ _

25% Power, 1 AC line cycle on, 3 cycles off

50% Power, 1 AC line cycle on, 1 cycle off

With single-cycle variable time base (VTBS) control, at 50% power, power is on one cycle, and off one cycle. At 25%, it is on for one cycle and off for three. Under 50%, the unit is not on for more than one consecutive cycle. Over 50%, the unit is not off for more than one consecutive cycle. This model will work with a linear voltage input, a 4 to 20mA input or a potentiometer input.

Through-Wall Heatsink

Recommended maximum enclosure temperature is 80°C (176°F)

Phase Angle

Models: DC1 _ _ _ [L, P] _ _ _ _

Phase angle control (control Type P) is infinitely variable inside the sine wave. This provides a variable voltage and/or current output. This option includes soft start and line voltage compensation. This model will work with a linear voltage input, a linear current source input or a potentiometer input. This is single-phase only. Alarms not available on phase angle models.
1. Push the unit in and down to catch the rail hook on top of the rail.
2. Rotate the bottom of the unit in toward the rail.
3. The rail clasp will audibly “snap” into place. If the DIN-A-MITE does not snap into place, check to see if the rail is bent.
4. Mount the cooling fins vertically.

1. Press down on the release tab while rotating the unit up and away from the rail.

**Unit Dimensions - Fan-Cooled**

- Front panel is touch-safe, no clearance is required.
- 102 mm (4.0 in) clearance for air flow and wire bending radius
- Rail Release Tab (pull down)
- Rail Release Tab (pull down)
- 102 mm (4.0 in) minimum
- 102 mm (4.0 in) clearance for air flow and wire bending radius

**WARNING:**
Only authorized and qualified personnel should be allowed to install and perform preventive and corrective maintenance on this unit. Failure to follow this guideline could result in damage to equipment, and personal injury or death.

**WARNING:**
Hot surface, do not touch the heat sink. Failure to follow this guideline could result in personal injury.

Mount the cooling fins vertically.
WARNING:
Only authorized and qualified personnel should be allowed to install and perform preventive and corrective maintenance on this unit. Failure to follow this guideline could result in damage to equipment, and personal injury or death.

WARNING:
Hot surface, do not touch the heat sink. Failure to follow this guideline could result in personal injury.

Mount the cooling fins vertically.

Typical Panel Opening
WARNING: Use National Electric (NEC) or other country-specific standard wiring practices to install and operate the DIN-A-MITE. Failure to do so may result in damage to equipment and property, and/or injury or loss of life.

WARNING: Only authorized and qualified personnel should be allowed to install and perform preventive and corrective maintenance on this unit. Failure to follow this guideline could result in damage to equipment, and personal injury or death.

WARNING: Do not use the DIN-A-MITE Vac-input models with a temperature controller that includes an RC snubber circuit across its output. Remove the RC snubber circuit before placing the DIN-A-MITE into service.

NOTE: Alarm options not available with multizone input option.
NOTE: The potentiometer and resistors are customer-supplied. For the potentiometer only, order Watlow part number 08-5362.

`1kΩ Potentiometer` Input

Use with 0 to 5V (dc) Input

Auto and Manual Input Application

(For models DC [1, 2, 3] _ - _ _ [L, P, S] _ - _ _ _)

When you use the 4 to 20 mA (dc) temperature controller output and the DIN-A-MITE control input 1 to 5V (dc),

If you use the 0 to 5V (dc) temperature controller output, order the DIN-A-MITE control input 0 to 5V (dc).
1. Attach a clamp-on ammeter to the load line.
2. Adjust the current limit potentiometer fully counterclockwise (for minimum current flow).
3. Turn the temperature controller on and adjust the input signal to the DIN-A-MITE for zero percent power.
4. Turn on the power to the DIN-A-MITE.
5. Gradually increase the input signal.
6. Adjust the current limit potentiometer clockwise until the current to the load is measurable. The current limit indicator (Zone 3) light should turn on until the output is allowed to go full on, with no limit. At that point, the indicator light will turn off.
7. Gradually increase the input signal to 100% power, then adjust the current limit potentiometer to obtain the desired maximum current to the load.

NOTE: The DIN-A-MITE is shipped factory-calibrated with the potentiometer adjusted fully clockwise (no current limiting). Adjust the potentiometer clockwise to increase the current; counterclockwise to decrease the current.

NOTE: A short overcurrent through the load may occur, as the circuitry detects the high current, if the input signal from the temperature controller is abruptly increased.

WARNING: Only authorized and qualified personnel should be allowed to install and perform preventive and corrective maintenance on this unit. Failure to follow this guideline could result in damage to equipment, and personal injury or death.

NOTE: The alarm options are not available with phase angle units.

1. WARNING: Use National Electric (NEC) or other country-specific standard wiring practices to install and operate the DIN-A-MITE. Failure to do so may result in damage to equipment and property, and/or injury or loss of life.

2. WARNING: Wiring examples show L2 in phase-to-phase, 200V~ (ac) and above configuration. In phase-to-neutral, 100V~ (ac) and above applications, L2 is neutral and must not be fused or switched. Failure to follow this guideline could result in personal injury or death.

3. WARNING: Only authorized and qualified personnel should be allowed to install and perform preventive and corrective maintenance on this unit. Failure to follow this guideline could result in damage to equipment, and personal injury or death.

NOTE: The alarm options are not available with phase angle units.
The Watlow DIN-A-MITE alarm option provides a common alarm output for open-heater or shorted SCR conditions. **This is a non-latching alarm.**

- A shorted SCR alarm is detected when there is no command signal and a load current is detected. The alarm output is then energized.
- An open-heater or partial open-heater state is detected when a command signal is present and a reduced or no output current is detected. The alarm output is then energized.

**Setup Procedure for Open-Heater Alarm**
(For Input Control Signal type S option only)
1. With the temperature control wired to the DIN-A-MITE SCR power control, set the temperature control output to “full on” (20mA for 4 to 20mA output, or 5V for 0 to 5V output).
2. Adjust the open heater alarm adjustment potentiometer until the alarm indicator light on the front panel is full on, with no intermittent cycling.
3. Slowly adjust the potentiometer until the open heater indicator light just turns full off, with no intermittent cycling.

If you are getting false alarms, the adjustment is probably set too sensitive and should be re-adjusted towards the off condition of the open-heater indicator light.

No setup procedure required for shorted SCR alarm.
NOTE:
Adjust the potentiometer clockwise to increase the current; counterclockwise to decrease the current.

WARNING:
Use National Electric (NEC) or other country-specific standard wiring practices to install and operate the DIN-A-MITE. Failure to do so may result in damage to equipment and property, and/or injury or loss of life.

WARNING:
Only authorized and qualified personnel should be allowed to install and perform preventive and corrective maintenance on this unit. Failure to follow this guideline could result in damage to equipment, and personal injury or death.

NOTE:
The shorted SCR alarm option is not available with phase angle units.

Torque Guidelines
- Properly torque line and load terminals to 2.7 Nm (24 in-lb).
- Retorque after 48 hours to minimize wire cold flow.
- Retorque line and load terminals every 3 to 6 months.

3-phase, 2-leg Shorted SCR Alarm
(Model DC2 _ - _ _ [C, F, K, S] _ - S _ _ _ )

3-phase, 3-leg Alarm, Shorted SCR and Open Heater Alarm
(Model DC3 _ - _ _ _ _ - [S, H] _ _ _ )

Fan-Cooled

Fan power required
24V= (dc)
120V~ (ac)
240V~ (ac)
(customer supplied)
**WARNING:**
Use National Electric (NEC) or other country-specific standard wiring practices to install and operate the DIN-A-MITE. Failure to do so may result in damage to equipment and property, and/or injury or loss of life.

**WARNING:**
Wiring examples show L2 in phase-to-phase, 200V~ (ac) and above configuration. In phase-to-neutral, 100V~ (ac) and above applications, L2 is neutral and must not be fused or switched. Failure to follow this guideline could result in personal injury or death.

**WARNING:**
Only authorized and qualified personnel should be allowed to install and perform preventive and corrective maintenance on this unit. Failure to follow this guideline could result in damage to equipment, and personal injury or death.

**Torque Guidelines**
- Properly torque line and load terminals to 2.7 Nm (24 in-lb).
- Retorque after 48 hours to minimize wire cold flow.
- Retorque line and load terminals every 3 to 6 months.
3-phase, 3-leg Output, Four Wire Wye

(Model DC3 _ _ _ _ _ _ _ _)

2-zone

3-zone

Multizone Output Wiring

(For models DC [8, 9] _ _ _ [C, K] _ _ _ _)

NOTE:
Independent loads do not have to be on the same phase.
WARNING: Use National Electric (NEC) or other country-specific standard wiring practices to install and operate the DIN-A-MITE. Failure to do so may result in damage to equipment and property, and/or injury or loss of life.

WARNING: Wiring examples show L2 in phase-to-phase, 200 V~ (ac) and above configuration. In phase-to-neutral, 100 V~ (ac) and above applications, L2 is neutral and must not be fused or switched. Failure to follow this guideline could result in personal injury or death.

WARNING: Only authorized and qualified personnel should be allowed to install and perform preventive and corrective maintenance on this unit. Failure to follow this guideline could result in damage to equipment, and personal injury or death.

NOTE: If you plan to wire multiple DIN-A-MITE alarm outputs, you need to include an intermediate relay for each DIN-A-MITE used.

---

**Alternative Latching Alarm Circuit**

If there is a need for a latching alarm in the case of an open heater or shorted SCR, the DIN-A-MITE alarm circuit could be used as shown in the latching alarm example at right. If the DIN-A-MITE triac alarm output energizes, it will energize the RY1 (external alarm relay) mechanical relay coil. Once the RY1 coil is energized it will latch on (via the RY1A normally open contact) until the power to the relay is removed. You could cycle the power via a reset switch. The RY1B contact set can be used for alarm signaling.
Non-latching Alarm Option
(models DC__-__S_-H__)

Open Heater and Shorted SCR Alarm
The shorted SCR detector compares the input command signal and actual load current. If load current is present without an input signal then the shorted SCR alarm will energize a triac (on board the DIN-A-MITE) output.

An open-heater or partial open-heater state is detected when a command signal is present and a reduced or no output current is detected. The alarm output is then energized.

This is a non-latching alarm. This output can be used to drive various indication devices, such as a coil, light, buzzer, etc. See the alternative latching circuit section below.

NOTE: The current transformers must be in the controlled legs on a 2-leg DIN-A-MITE. The load wires must pass through the current transformers in the same direction.
Declaration of Conformity
DIN-A-MITE® “C” Power Controller

Watlow Winona, Inc.
1241 Bundy Blvd.
Winona, MN 55987 USA

Declares that the following product:

Designation: DIN-A-MITE® “C” Power Control
Model Numbers: DC (1, 2, 3, 8 or 9)(0, 1, 2, 3 or T) – (02, 12, 24, 27, 40, 48 or 60)(C0, C1, C2, K1, K2, K3, F0, F1, S0, S1, S2, S3, S4 or S5) – (0, C, D, H or S)(followed by any 3 numbers or letters.)
Classification: Power Control, Installation Category III, Pollution degree 2
Rated Voltage: 24 to 600V~ (ac)
Rated Frequency: 50 or 60 Hz

Meets the essential requirements of the following European Union Directives by using the relevant standards shown below to indicate compliance.

89/336/EEC Electromagnetic Compatibility Directive
EN 61326: 1997 With A1:1998 – Electrical equipment for measurement, control and laboratory use – EMC requirements (Industrial Immunity, Group 1 Class A Emissions)
EN 61000-4-3: 1995 – Electrical Fast-Transient / Burst Immunity
EN 61000-4-4: 1995 With A1, 1996 – Surge Immunity
EN 61000-4-6: 1996 – Conducted Immunity
EN 61000-4-11: 1994 Voltage Dips, Short Interruptions and Voltage Variations Immunity

Note 1: Use of an external filter is required to comply with conducted emissions limits. See page 19 for information and instructions.

Note 2: A Line Impedance Stabilization Network (LISN) was used for conducted emissions measurements.

Note 3: To comply with flicker requirements, command signal models F0, F1, and S (0-S) may not be used, and cycle time must be set greater than 4 seconds on C0, C1, C2 and K1, K2, K3 models.

73/23/EEC Low-Voltage Directive

Title of Authorized Representative

Signature of Authorized Representative
An external EMI filter must be used in conjunction with the DIN-A-MITE for loads in excess of six amperes (6A) at 150 to 250 kHz. Without a filter applied, the DIN-A-MITE does not comply with the conducted emissions standard for loads above 6A at 150 to 250 kHz.

Watlow has verified that two types of filters will suppress electromagnetic interference (EMI) created by the DIN-A-MITE power controller to within the CE requirements.

A tank filter supplied by Crydom or Watlow, installed across the power lines, suppresses EMI on the power lines. See Figures 1 and 2. See Table 1 for the correct filter.

### Table 1 — DIN-A-MITE EMI Filters.

**WARNING:**

The tank filters specified may suppress desirable communications carried on power lines in the 150 to 250 kHz region. The filters may suppress carrier current such as that used for infant monitors and medical alert systems. Verify that suppressed carrier current or other desirable communications on power lines creates no hazard to people or property. Failure to observe this warning could result in damage to property, and injury or death for personnel.

**WARNING:**

All filter installation and wiring must be performed by qualified personnel, and conform to local and national electrical codes. Failure to observe this warning could result in damage to property, and injury or death for personnel.

Warranty

The Watlow DIN-A-MITE is warranted to be free of defects in material and workmanship for 36 months after delivery to the first purchaser for use, providing that the units have not been misapplied. Since Watlow has no control over their use, and sometimes misuse, we cannot guarantee against failure. Watlow’s obligations hereunder, at Watlow’s option, are limited to replacement, repair or refund of purchase price, and parts which upon examination prove to be defective within the warranty period specified. This warranty does not apply to damage resulting from transportation, alteration, misuse, abuse or improper fusing.

Technical Assistance

If you encounter a problem with your Watlow controller, review your configuration information to verify that your selections are consistent with your application: inputs; outputs; alarms; limits; etc. If the problem persists after checking the configuration of the controller, you can get technical assistance from your local Watlow representative, by e-mailing your questions to wintechsupport@watlow.com or by dialing +1 (507) 494-5656 between 7 a.m. and 5 p.m., Central Standard Time (CST). Ask for an Applications Engineer.

Please have the following information available when calling:

- Complete model number
- All wiring and load information
- User’s Manual

Returns

1. Call Watlow Customer Service, (507) 454-5300, for a Return Material Authorization (RMA) number before returning any item for repair. We need the following information:
   - Ship to address
   - Bill to address
   - Contact name
   - Phone number
   - Method of return shipment
   - Your P.O. number
   - Detailed description of the problem
   - Any special instructions
   - Name and phone number of the person returning the product

2. Prior approval and an RMA number, from the Customer Service Department, is required when returning any unused product for credit. Make sure the RMA number is on the outside of the carton, and on all paperwork returned. Ship on a Freight Prepaid basis.

3. After we receive your return, we will examine it and try to verify the reason for the return.

4. In cases of manufacturing defect, we will enter a repair order, replacement order or issue credit for material returned.

5. To return products that are not defective, goods must be in new condition, in the original boxes and they must be returned within 120 days of receipt. A 20 percent restocking charge is applied for all returned stock controls and accessories.

6. If the unit is unrepairable, it will be returned to you with a letter of explanation.

7. Watlow reserves the right to charge for no trouble found (NTF) returns.
