YOKOGAWA Clamp-on Power Neters

Models CW120, CW121 Model CW240 AP240E Data Analysis Program

Yokogawa Meters & Instruments Corporation

Realization of Power & Power Quality Management using a GW240

It is essential to measure energy and manage consumption of each sector such as facility and production line for your energy saving activities and to minimize loss.

CASE 2

CASE 3

CASE 1

Contribute for improving productivity!

Constantly analyze productivity by managing unit consumption. Managing voltage, current, electric power and power factor makes for good maintenance of production facility. Moreover, you can check operation management loss and enhance productivity.

Discover of electric power waste!

Measure and collect data of electric power consumption by short period. The CW240 can figure out load of production process, and has the ability to check wasteful time and current flow of standby load current.

2

Detect voltage fluctuation!

When trouble occurs on supply side of electric power, instantaneous voltage drop can affect quality of produced goods at the factory. The CW240 is useful for collecting data such as voltage fluctuation to prevent such problems

Characteristics of CW240

- Simultaneous measurement of instantaneous value, electric energy, demand, harmonics and voltage fluctuation.
- Simultaneous measurement of loads in 4 systems of up to 1P2W Simultaneous measurement of loads in 2 systems of up to 1P/3P3W
- Data saving interval can be set from 1 waveform (for instantaneous measurement) to 1 hour.
- Measure up to 50th order harmonics
- 4ch leakage current measurement using newly released clamp probe 96036
- Long time data logging by using compact flash memory.
- Multi language for the display (English, German, French, Italian, Spanish, Korean and Chinese)
- 2ch analog input (Optional) Equipped with 4ch analog output (recorder output)
- AC adaptor for power supply. NiMH rechargeable battery and alkaline battery for backup

Power

Power Investigation Improves power Efficiency Through Detailed Data Coll

Measurement of Instantaneous Value: For investigation of power consumption, maximum load factor and peak current

The CW240 can be used to carry out investigation regarding renewal of electric equipment such as transformers in building, check load factors and demand factors, and to check current/voltage fluctuation at motor start-up.

Allows switching data from one to another and saving data.

Measurement elements : Voltage/current/electric power (active, reactive, apparent)/power factor/phase angle of each phase, average/minimum/maximum values of each measurement element.

- •Data collection time :
- : 1/2/5/10/15/30 seconds, 1/2/5/10/15/30/60 minutes One cycle (waveform), 100/200/500 ms (short time interval)

Convenient functions Use of the 3-wattmeter method enables display of instantaneous value of each measurement element.

Discovers Failures in Power Supply Lines.

Harmonic Measurement

In many cases, inverter power supplies are used to drive air-conditioners and compressors. These power supplies cause distortions in voltages and currents, leading to malfunctions and power loss. Therefore, investigation and control of influences on the main power supplies by harmonics is necessary.

• Harmonics for analysis : 1st to 50th

- Display data List, bar graph (linear/log), vector (inflow/outflow judgment)
- Measurement elements : Level, content, phase angle (voltage/current/electric power of each harmonic), aggregate value (voltage, current, electric power, power factor), aggregate harmonic distortion factors (THD-F or THD-R) of voltage/current
- THD-F

Power Supply

Quality Control

- Distortion factor for the fundamental wave, THD-R: Distortion factor for all rms values voltage/current
- Data collection time : 1/2/5/10/15/30/60 minutes

Convenient functions

The harmonic whose data is required to be saved can be selected. Inflow/outflow of harmonics can be checked.

●THD-F

6

Distortion factor for the fundamental wave, THD-R: Distortion factor for all rms values

(Influences by harmonics)

Category	Device	Influence type
Power devices	Capacitor, reactor	Overheat, burn, vibration, noise due to
		excessive current
	Transformer	Overheat, noise, increase in core/copper loss
	Fuse, breaker	Blow-out, malfunction due to excessive
		current
	Induction motor	Periodic fluctuation of revolution speed,
		overheat, increase in loss
Electronic/electrical	Protective relay	Malfunction
household	Electrical household	Flickering, noise, malfunction, breakdown
appliances	appliances	
	Fluorescent lamp,	Burn of stabilizer/capacitor, flickering
	mercury-arc lamp	
	Computer	Malfunction, out of control, breakdown
	Electronics device	Malfunction of automatic control part

🖕 : Inflow of harmonic

Explanation of vector diagram

- Vector length indicates the apparent power of each harmonic in proportion to that of the fundamental harmonic.
 The horizontal axis shows active neuron and the varied active large indicator.
- power and the vertical axis indicates reactive power. They are shown in a logarithm
- Frequencies shown are those of the measurement element actually measured.

v24c Solution

Improvement of Harmonic Measurement and Diagnosis

Printing plant

Purpose: To investigate the cause for periodic breakdown of printing machine It may be caused by harmonics generated in the power lines.

Measurement: Advantages obtained by using the CW240 • Compact and easy to carry • Measurement of up to the 50th harmonic • Long-term data collection • Vector diagram display

Result: Occurrence of harmonics in 5th and 7th was discovered!

In addition, it became clear that harmonics are generated due to loads inside the factory. In perticular, the 5th harmonic causes adverse effects such as burn-out of the serial reactor in the capacitor used to improve the power factor.

Voltage Fluctuation Measurement

The CW240 detects dates/times of when fluctuations occur, fluctuation type, channels where they occur, rms values, and periods between start and end. The voltage threshold is set, and fluctuations exceeding the threshold are detected.

• Measurement element : Voltage dip (voltage drop), voltage swell (voltage rise), instantaneous power failure

: Detected based on the voltage rms value of one waveform.

Up to 100 data sets can be saved.

Measurement results

Convenient functions

<u> w240</u>

olutior

It is possible to provide a voltage difference between start and end by setting a hysteresis.

Item	Phenomenon	Problem
Voltage dip	A voltage drop occurs for a short	Decrease of power supply voltage
(Sag, voltage drop)	time due to the occurrence of a large	may cause devices to stop or reset
	inrush current, for example, when a	operations.
	motor is started.	
Voltage swell	Voltage increases instantaneously,	Increase of power supply voltage
(Voltage rise)	for example, when lightning occurs	may cause devices to stop or reset
	or when a power line with a heavy	operations.
	load is turned ON/OFF.	
Instantaneous	Power supply is stopped	Instantaneous power failure may
power failure	instantaneously or for a short/long	cause devices to stop or reset
(Instantaneous stop	time, for example, when a problem	operations. Recently, various

	lightning, etc.) or due to the trip of a	widespread use of UPS
	breaker caused by short circuits in	(uninterruptible power source).
	the power supply, etc.	

Power Supply Quality Check at Various Places

Quality check for power supplies used in semiconductor manufacturing equipment in accordance with the SEMI guidelines

Measure stability of the voltage of supplied power according to SEMI S2-0302 (Environmental, Health, and Safety Guideline for Semiconductor Manufacturing Equipment). If a sag (default: within 2%) occurs, the wafer is removed from the line for inspection so daily quality check for power supplies is necessary.

SEMI: Semiconductor Equipment and Materials International SEMI guidelines are used at the time the contract is made, to evaluate the safety of semiconductor manufacturing equipment when exporting it from Japan to the USA.

Advantages obtained by using the CW240 •Compact and easy to carry •Detects voltage fluctuations in each cycle. Instantaneous power failures and voltage fluctuations are monitored continuously, and the occurrence and recovery times are reported.

Occurrence date/time of the sag can be reported so that semiconductor quality can be improved.

Verification of instantaneous power failure preventive measures implemented in semiconductor manufacturing equipment

Voltage level (100% as reference)	50% ~	70% ~	80% ~	90% ~ 110%	~ 120%
Fall (rise) time	Within 0.2 sec.	Within 0.5 sec.	Within 10 sec.	No limit	Within 0.5 sec.

Measures Loads in Four Systems Simultaneously.

The CW240 enables simultaneous measurement of loads in four systems in the case of the single-phase 2-wire system, and in two systems in the case of the single/three-phase 3-wire system (common to voltage).

Current clamp probe/range can be set for each system.

Reduces Operation Errors at Work Site.

Wiring check function

Prior to start of measurement, the CW240 checks whether wiring is correct. Wiring errors, reverse connection of current clamps, and phases to be checked can be displayed in a vector diagram.

Setting check function

Settings made for data saving can be checked in the screen. This prevents data acquisition errors that may occur due to mistakes in voltage range setting, current clamp selection or data save item selection.

Saving a Large Amount of Data

Use of an external memory card (compact flash) makes it possible to save a large amount of data. A memory card $(^{(1)})$ of up to 2GB can be used, and the data is saved in CSV format. $(^{(2)})$ In addition, the CW240 has a 1MB internal memory.

- *1: Memory cards purchased from Yokogawa should be
- used. *2: Data shorter than one second is saved in binary format.
- Screen copies can be made in bitmap format. Voltage fluctuation data is saved in text format.

Leakage Current Measurement

- External magnetic field effect is 0.002A or less, at 400A/m -

Yokogawa's proprietary technology has achieved a magnetic field impact amount of 30 ppm even in adjacent power lines. (At 100A) Use of the 2A current clamp probe (96036) enables measurements with 200.0 mA range.

25 ЗТ upp CW240 side Three-phase 4-wire 4-current

Analog Input/Output

- Besides power data -

Analog data such as temperature and illuminance data can be saved simultaneously with power data by using the analog input function (2 channels).

The available input ranges are 100 mV/1 V/5 V. In addition, the analog output function (4 channels) acquires data to an external recorder, allowing data duplexing. Output is $\pm 1\,\rm VDC.$ (The analog input/output function is optional.)

Digital illuminance meter 51001

Other Convenient Functions Besides the AC adapter, it is possible to use a NiMH battery pack (94004) or alkaline Power supply backup batteries (six AA batteries). The CW240 will continue to operate even if supply of power is interrupted. The CW240 supports Japanese, English, German, French, Spanish and Italian (available **Multi-lingual support** in the near future). The data for the selected items can be saved or printed using the SAVE key. Manual data saving However, it cannot be saved during integrating measurement (and during standby). The currently displayed screen can be saved or printed using the DISP COPY key. Screen hard copy Files are saved in bitmap format. The measured data for the selected five items can be zoomed in. **Zoom function** The items to be displayed can be selected from instantaneous value and measured power quantity data.

Low-cost tools to support your energy conservation efforts

As energy conservation becomes increasingly important, we are pleased to present low-cost clamp-on power meters designed to meet user needs for simple tools capable of measuring power values and instantaneous values.

Useful features for energy conservation and power measurement

Periodically save data as often as once a second

Data can be saved as low as 1-second interval. This capability allows the CW120 Series to respond quickly to load fluctuations and measure transient responses in equipment.

Check equipment operating conditions

The CW120 Series has an instantaneous value filing function (enabling multiple data records to be saved in a single file when multiple measurements are taken) which is useful for determining equipment operating conditions.

Wiring error check function

This function helps ensure that measurement operations are correct.

Simultaneous measurement of multiple facilities

Multiple CW120 Series units can start and stop integration simultaneously through externally controlled I/O.

Works even with small electric energy values

Easily change the decimal position (the number of digits following the decimal point) and display unit (Wh, kWh, MWh, GWh) on the electric energy display.

Details for Models CW120/CW121

Items		CW120/CW121
Measurement Mode	Input system	Single-phase 2-wire to 3-phase 4-wire
	Instant mode	(Up to 3 phase 3 wire for CW120)
	Electric Energy mode	Available
Display	Screen	Segmented LCD with backlight
Communication	Interface	RS232 or RS485
	Protocol	MODBUS, PC-link, Power-Monitor, Proprietary
	Monitoring by AP240E	Available
Power supply		100 to 240V AC, Supply the power from input.
Size (W×H×D)		117×161×51mm
Weight		600g

Load measurements on multiple systems

- In addition to support for a variety of connection types, The CW120 Series can simultaneously measure the loads* (facilities, equipment) on multiple systems sharing a common power supply. CW120 (three-phase 3-wire model): 1ø2W×2 CW121 (three-phase 4-wire model): 1ø2W×2, ×3
- 1ø2W Three current systems (example)

Low-cost tools to support your energy conservation efforts

Compact design

- The CW120 Series is compact in size (117×161×51mm (W×H×D)), making it ideal for installation in cubicles and inside distribution panels. Installation is even easier with the magnetic case (93023).
- Although the CW120 Series is small, it has a large backlit LCD.
- A new addition to the clamp lineup is a small-diameter current clamp (model 96033, capable of measurements in the range of 5–50 A) for measurements in tight spots and locations where many wires are jumbled together.

Current clamp (96033)

ø18 mm

Magnetic case (93023)

Approximately 70 mm

Measurements

- The CW120 Series can be used for voltage measurements up to 495 V.
- A variety of connection types are supported, from single-phase 2-wire to three-phase 4-wire (CW120: three-phase 3-wire model; CW121: three-phase 4-wire model).
- Continuous measurement integration (accurate measurements can be obtained even if there are large load fluctuations)
- Plus/minus signs are shown for reactive power and power factor.
- The data saving interval can be set in the range of one second to one hour.

Parameters setting tool (name: Toolbox)

The setting software allows you to set CW120 Series measurement conditions through a PC and save measurement data on a PC when the unit is connected to the PC through RS-232 or RS-485 port.

Measurement conditions setting function

This function makes it easy to set basic functions needed for measurement, such as start/stop time and date, wiring method, clamp type, voltage, and current range etc.

• File transfer function

The data file stored in CF pack can be transferred to PC. Microsoft Excel can read transferred data file.

* Toolbox is included as a standard feature (on two floppy disks).

Microsoft, Windows, and Excel are trademarks or registered trademarks of Microsoft Corporation, the United States.

Advanced data management and communication

Data management and communication

- (1) You can connect CW120 to a PC through dedicated RS-232 cable.
- ② A printer (sold separately) can be connected through RS-232 cable to print measurement data.
- ③ If you have a media reader connected to your PC or card slot in notebook PC, measurement data and settings can be uploaded directly to a PC from CF* pack.

97037	2GB	Approx. 2years	Approx. 560hours	3system 1ø2W

* Compact Flash cards with memory capacity up to 2 GB may be used.

Network Communication

CW120 In addition to proprietary communication also supports, MODBUS, PC-link and Power Monitor protocols. PC-link is a protocol for Yokogawa's Temperature controllers and PLCs. Power Monitor protocol is a protocol for Yokogawa's Power Monitors. (PR201)

* DAQLOGGER is Yokogawa's communication software for Windows

Remote monitoring

The RS-485 allows multiple use to be connected for remote monitoring.

- * RS-485/RS-232 converter is required to connect the CW120/CW121-m-2 (RS-485 communication spec) to the RS-232 port on your PC.
 December 20 Minutes and and and all Value server's PS 222 MIS 405 Communication
- Recommended brand and model: Yokogawa's RS-232/RS-485 Converter Model ML2.

Specifications

■ Inputs

Para	meter	Voltage (V)	Current (A)

Crest factor		150/300 V range	Rated input: 2	Datad input: 9	
		450 V range	Rated input: 1.56	Rated input: 3	
Active input	range	10–110% of each range			
Display	Lower limit	All ranges 1.5 V		0.4% of each range	
range	Upper limit	130% of each range, excep	t 110% for 450 V range	130% of each range	
Temperature coefficient		±0.05% rng/°C		±0.07% rng/°C (including clamp)	
Display updatir	ng interval	Approximately one second			

■ Instantaneous Value Measurement

•Measurement parameters: Voltage rms (V), current rms (A), active power (W), frequency (Hz)

	(112)
•Measurement accuracy (at power	factor 1, including clamp)
Voltage:	±(0.3% rdg + 0.2% rng)
Current/active power:	±(0.8% rdg + 0.4% rng) when using clamps 96030, 96031, and
	96033
	±(1.2% rdg + 0.8% rng) when using clamp 96032
Frequency:	$\pm (0.1\% \text{ rdg} + 1\% \text{ dgt})$
 Computation parameters: 	Reactive power (Var), power factor
 Computation accuracy: 	(value calculated from measurement) ± 1 dgt
 Power factor influence: 	$\pm 1.0\%$ rng cosø = ± 0.5 (relative to power factor 1) when using
	clamp 96030
	$\pm 2.0\%$ rng cosø = ± 0.5 (relative to power factor 1) when using
	clamps 96031, 96032, and 96033
 Reactive factor influence: 	$\pm 1.0\%$ rng sinø = ± 0.5 (relative to reactive factor 1) when using
	clamp 96030

that provide the second state of the second s

■ Equations

•Voltage rms	$Vrms= \sqrt{\frac{1}{T}\int_{0}^{T} \nu(t)^{2} dt} = \sqrt{\frac{1}{T}\sum_{t=0}^{T} \nu(t)^{2}}$	
•Current rms	$Arms= \ \sqrt{\frac{1}{T}} \int\limits_{0}^{T} i(t)^2 dt \ = \ \sqrt{\frac{1}{T}} \sum\limits_{t=0}^{T} (t)^2$	
•Active power	$P = \frac{1}{T} \int_{0}^{T} v(t) \times i(t) dt = \frac{1}{T} \sum_{t=0}^{T} v(t) \times i(t)$	
	Single-phase 3-wire, three-phase 3-wire Three-phase 4-wire	$\Sigma P = P1 + P2$ $\Sigma P = P1 + P2 + P3$
	(t) (t) Innet side also	

v(t), i(t): Input signals T: One period for input signal or factor

•Reactive power and power factor						
	Reactive power (Note 2)	Apparent power	Power factor (Note 2)			
Single-phase 2-wire	$Qi=\sqrt{((VA)^2-P^2)}$	VA=V×A	P/VA			
Single-phase 3-wire	$\begin{array}{ll} Qi=&\sqrt{((VAi)^2-Pi^2)} & i=1,2\\ \Sigma Q=&Q1+Q2 \end{array}$	VAi=Vi×Ai i=1, 2 ΣVA=VA1+VA2				
Three-phase 3-wire (Note 3)	$Qi=\sqrt{((VAi)^2-Pi^2)}$ i=1, 2 $\Sigma Q=Q1+Q2$	$ \begin{array}{l} \mathrm{VAi=Vi\times Ai} \mathrm{i=1,2} \\ \mathrm{\Sigma VA=}\sqrt{3}/2(\mathrm{VA1+VA2}) \end{array} $	ΣΡ/ΣVΑ			
Three-phase 4-wire	$Q_i = \sqrt{(VAi)^2 - Pi^2}$ i=1, 2, 3 $\Sigma Q = Q1 + Q2 + Q3$	VAi=Vi×Ai i=1,2,3 ΣVA=VA1+VA2+VA3				
Computation range	Rated value depends on V and A ranges.	Rated value depends on V and A ranges.	-1~+1			
Display resolution	Same as for active power.	Internal computation only; data not displayed or saved.	± 1.000			

Note 1: In the case of distorted waves, there may be differences from other measuring instruments that are based on different measurement principles. Note 2: The polarity of each phase determined by the reactive power meter method is multiplied and the polarity is displayed. Note 3: In the case of three-phase 3-wire and unbalanced inputs, there may be differences from other measuring instruments that are based on different measurement principles, or wiring.

Electric Energy Measurement

Electric Entergy Measurement
 Measured parameters: Active electric energy, regenerative electric energy (regenerative electric energy is not displayed on the screen; it is merely saved)
 Measurement accuracy: Active power measurement accuracy ±1 dgt (with standard settings)
 Integration function settings Start/stop settings: Manual, timer, external trigger (control) Output intervals: 12/5/10/15/30 seconds; 1/2/5/10/15/30 minutes; 1 hour
 Displayed digits: This is set automatically based on the rated power, and the minimum resolution can be set

Saving items

Saving items: Voltage, current, active power, reactive power, power factor, frequency, active electric energy, regenerative electric energy

Display Functions

 Display screen: Backlit Maximum number of displayed digits Electric energy: 6 digits Other parameters: 4 digits •Range makeup: (rated values) Backlit segmented LCD

Increased quality and effectiveness of report creation

CW Viewer AP240E is data analyzing software for the CW240 Clampon Power Meter. Making full use of the rich measuring functions of the CW240, this efficiently manages the large amounts of measurement data that are required in order to implement power quality management, energy management, and power saving measures. Furthermore, the quality and efficiency of report creation has been improved in order that reports to meet certain purposes can be easily created.

Report creation in line with objectives

- Graph Display Daily Report Display, Weekly / Monthly Report Display Harmonic Graph Display
- Harmonics Instant Value Display Waveform Data Display
 - Voltage Change Display

Report Creation

Effective power supply quality and power saving management for PCs.

1

2

(3)

Bulk Data Management

In order to edit measurement data to create reports that meet objectives, it is necessary to sort the required elements from a broad range of measurement data, and to set both the parameters for display, and items to display. CW Viewer AP240E carries out bulk management of data by registering measurement data and display parameters. Easy data registration, deletion, reference, and analysis means that the program is easy to use immediately, even for beginners.

Bulk Management of Large Quantities of Measurement Data

Using the AP240E, it is easy to register a large amount of data measured with CW240 in the database, for integrated handling. (1) At the time of data registration, only the target files are displayed,

- and detailed information can be confirmed by selecting these files.
- (2) Measurement data can be searched by measurement date or group name.
- ③ Automatically links to measurement data such as that for waveforms and voltage changes.
- ④ Group names and comments can be added and registered.

Simple Report Creation

Select measurement data, and click the Data Display button to edit reports. Settings of display items is easy, and items such as graphs and daily reports are easy to create.

Simple Operation Clear Display

Pick out target elements from large amounts of data.

Items that can be selected when setting display items are displayed in a list, which means that measurement data items that are required for carrying out power management and power quality management can be efficiently selected to meet objectives.

- ()Up to a maximum of 8 items can be set for both the left and right axes.
- (2) Display items, units, and scale, etc. can be selected from the list.
- ③ Desired maximum and minimum values for the graph scale can be set. Additionally, the Automatic Settings button can be used to set optimal values.
- (4) This is also convenient for comparisons with power reduction targets, by setting standard values.

Easy Setting of Focus Times

Setting the start and period of the focus times enables setting of a range of part (or all) of the measurement data. (1) The display start time can be specified from the range of existing measurement data.

- (2) The specified display range can be moved easily using these buttons.
- ③ The graph display period (the whole period or a desired period) can be specified.
- (4) A desired range (more than the measurement cycle) can be specified.

Registered Data Details

(4)

Main screen

dialog

2 4

Focus Period settings

Variety of Presentations in Line with Objectives

Report formats that can be selected as a result of the types of measurement data are displayed on tabs. Report formats in line with objectives can be easily selected with tabs from a variety of report presentations.

Selection of Report Formats with Tabs

Report formats such as graph display, daily report display, harmonics graph and voltage change can be easily switched by selection with tabs.

Superimposed Display of Multiple Waveforms

A channel, system, and type can be selected for each measurement item such as power, voltage, and current, and up to 8 items can be simultaneously displayed on the graph for each of the left and right vertical axes (a total of 16 items). This enables the comparative display per channel and system of multiple data items.

Easy-to-see Graph Display

Graph display can be changed (line type, line thickness, and line color, markers, etc.) in line with objectives, and multiple measurement data can be displayed on the report in an easy to see manner.

Harmonics Data Analysis

Harmonics graphs are displayed by selecting the desired degree from amongst 50. Harmonics trend graphs and harmonics instant value graphs can be selected with tabs, and in the harmonics instant value tab, all harmonics levels, harmonics content ratios, and phase differences can be displayed. Vector display of power phase differences is also possible.

Waveform Data Display

Displays as a graph waveform data (maximum of 7 for each of four systems) measured with the CW240. Irregularities in voltage and current waveforms for each phase can be viewed at a glance, making for effective management of electrical power quality (current situation and confirmation of measures taken).

One-Touch Selection of Daily and Weekly Reports

Daily Report Display

Demand measurement values for power consumption are displayed in time units (30 minutes or 1 hour) as daily reports, simply by selecting the desired demand measurement items. Furthermore, load and demand ratio calculations are carried out automatically by setting capacitance values for facilities.

Weekly and Monthly Report Display

Demand measurement values for power consumption in 1 day units are displayed as weekly and monthly reports. Load and demand ratio calculations are carried out automatically in the same way as with daily reports.

Voltage Change Display

Displays in a list voltage drops, rises, and momentary power interruption detection data and detection time. This enables confirmation of the start, end, and period of voltage changes.

Record Display

When the graph display, harmonics trend display, and harmonics instant value display tabs have been selected, numerical data for the displayed graph range can be displayed as a record.

Harmonics Trend Display

Power Phase Difference Vector Diagram Display

Waveform Display

Harmonics Instant Value Display

361

Report Creation

Effective power supply quality and power saving management for PCs.

Report Creation Customization Functions

Graph and Record Printing

Print graphs and records by using the Print buttons on the graph display screen and records screen. Additionally, when printing, the preview screen will allow confirmation of output.

•Selectable Printer Type

Printer configuration is possible in order that either color or monochrome are printed correctly.

AP240E Analysis Data can be Further Edited in MS Excel and Word

Graph Copy

The portion of the graph on the displayed screen can be copied to the clipboard by using the Graph Copy button on the graph screen. This enables graph images that are created in CW Viewer AP240E to be pasted into Excel or Word documents. Power phase difference vector diagrams and waveform data are also handled in the same way.

Record Copy

By using the Record Copy button in the same way as with graphs, record data can be copied to the clipboard. Record data is copied as text data.

Saving Record Data as CSV Format Files

The range of data displayed on the daily report, monthly report, and record screens can be saved as CSV format files. CSV files can be used in spreadsheet software; this is convenient for secondary analysis of measurement data, and creation of original reports.

Useful Functions

Analog Input Data

Scaling for analog input data settings, and unit settings can be carried out. This enables comparison of measurement data such as temperature and lighting density with data such as used energy.

Voltage Unbalance Ratio Display

Automatically measures voltage unbalance ratios when $CH1 \sim CH3$ voltage is measured, and can display as a graph in the same way as with other measurement data items.

•Default Settings

Frequently used unit settings, graph display parameter settings, and group name settings, etc. can be registered as defaults in advance.

Display Settings / Measurement Parameter Display

Settings parameters and measurement intervals, etc. at the time of measurement are displayed on the top of the tabs on the data display screen, enabling constant confirmation by selecting tabs even if the report format is changed.

Measurement Parameter Display

AP240E Specifications

Data Management

- Display of measurement parameters when measurement data is registered.
- Registration in the database of measurement date, measurement parameters, group names, and comments added to measurement data possible.
- Bulk management of data such as harmonics data, waveform data, and voltage change data.
- Editing of data names, comments, and group names possible.
- Searching by measurement dates / periods, and group names possible.
- Saving of settings information at the time the report was displayed, and that corresponds to data.
- Setting of defaults for a range of settings data possible.

Data Display Selection

- Always display measurement parameters on the data display screen.
- Selection by the use of tabs to select report displays (graph display, daily report display, weekly / monthly report display, harmonic graph display, harmonics instant value display, waveform data display, voltage change display) possible.

Graph Display

- Graph display of up to 8 items on each of the left and right axes possible.
- Selection of display items an ordered list possible.
- Settings of units, decimal points, minimum values, and maximum values, as well as automatic adjustment for each of the left and right axes possible.
- Graph customization (line type, line thickness marker, color) possible.
- Setting of the graph display period (focused time, period, measurement cycle) possible.
- Movement of the graph display period possible.
- Graph interpolation of non-measured segments possible.

Daily Report Display, Weekly / Monthly Report Display

- Displays the daily report, and weekly / monthly report tabs where there is demand measurement data.
- Displays selected demand measurement values per time (or date).
- Selection of display intervals for daily report display (1 hour / 30 minutes) possible.
- Can set the equipment capacity, and automatically calculate load ratios and demand ratios.

Harmonic Graph Display

- Displays the harmonics graph tab where there is harmonics measurement data.
- Selection of degree data up to a maximum of 50 degrees possible.

Harmonics Instant Value Display

- Displays the harmonics graph tab when there is harmonics measurement data.
- Selection of degrees of up to 50 possible.
- Display of power phase difference vector diagrams possible.

Waveform Data Display

- Displays the waveform data tab when there is waveform data.
- Display of selected waveform data.

Voltage Change Display

- Displays the voltage change data tab when there is voltage change detection data.
- Displays voltage change data per detection time.
- Selection of display items (voltage dip, voltage swell, detected momentary power interruptions) possible.

Maximum allowable curr (600 Hz or less		1200 Arms AC (continuous)	2400 Arms AC (continuous)	2400–2800 Arms AC (for 15 minutes) 2800–3600 Arms AC (for 10 minutes)	3600 Arms AC (10 Hz to 1 kHz)	360 Arms AC		
Output impedance		2Ω or less			Approx. 47 Ω			
External magnetic field effects		±0.1% of full scale (at 400 A/m, 50/60 Hz)						
Conductor position effects		1% +0.2 A or less			$\pm 2\%$ of full scale			
Operating circuit voltage		600 Vrms AC max.			Main unit: 600 Vrms AC max. Measuring unit: 1000 Vrms AC max.			
Measurable conductor diameter		$\emptyset 64 \times 100$ mm, five 125×5 mm bus bars, or three 100×10 mm bus bars			ø170 mm max.			
External dimensions		Approx. 310 (W) \times 120 (H) \times 48 (D) mm			Main unit: Approx. 140 (W) × 64 (H) × 28 (D) mm Measuring unit: Approx. 610 mm			
Weight		Approx. 1400 g			Main unit: Approx. 300 g (including battery and output cable) Measuring unit: Approx. 180 g			
Output cable l	ength							
Output termin	al		Banana plug (safety terminal)					
Power supply				9 V alkaline battery (6LF22) AC Adapter				
					Continuous measurement: 150 hours Intermittent measurement: 10,000 times
