

PROCESS TIMER

The T6 timer with stack light is a simple way to control process times with a loud (103 dB) buzzer and tower light. Simply set the time to the desired process time inside the box, and when the button is pushed, the timer counts down for the set amount of time before sounding the alarm. Early warning before the end of countdown. Another push of the button to silence the buzzer and reset.

FEATURES

- Waterproof enclosure is rated IP65 (NEMA 4X)
- Multiple power inputs (12V, 24V, 120V etc.)
- Convenient to set time like a kitchen timer.
- Triple stack light available.
- Many flexible behaviors built in such as count up, count down, count overrun, 10A relay output.
- Other different modes available by setting DIP switches internally. Some examples:
 - Cycles with or without cancellation
 - Guard duty
