2.1. About this document

Use
> Please read this documentation carefully and familiarize yourself with the product before putting it to use. Pay particular attention to the safety instructions and warning advice in order to prevent injuries and damage to the product.

Symbols and writing standards

<table>

2.2. Ensure safety

> Do not operate the instrument if there are signs of damage at the housing, mains unit or hoses.

> Do not store the product together with solvents. Do not use any desiccants.

> Carry out only the maintenance and repair work on this instrument that is described in the documentation.

> Dangers may also arise from the refrigeration systems being measured or the measuring environment: Note the safety regulations valid in your area when performing the measurements.

> If the manifold falls or another comparable mechanical load occurs, the pipe sections of the refrigerant hoses may break. The valve stem shutoff may also be damaged, whereby further
damage to the interior of the manifold may occur that cannot be identified from the outside. The refrigerant hoses must therefore be replaced with new, undamaged refrigerant hoses every time the manifold falls or following any other comparable mechanical load. Send the manifold to Testo Customer Service for a technical check for your own safety.

> To prevent damage from ESD (electro-static discharge) or transient voltage spikes make sure that your refrigeration system is properly grounded, as otherwise the manifold might get damaged.

2.3. Protecting the environment

> Dispose of spent batteries in accordance with the valid legal specifications.

> At the end of its useful life, send the product to the separate collection for electric and electronic devices (observe local regulations) or return the product to Testo for disposal.

> Refrigerant gases can harm the environment. Please note the applicable environmental regulations.

3 Product description

3.1. Use

Testo 557 is a digital manifold for maintenance and service work on refrigeration systems and heat pumps. It is intended for use by qualified personnel only.

The function of the testo 557 is designed to replace analog manifolds, thermometers and pressure/temperature charts. Pressures and temperatures can be applied, adapted, tested and monitored.

Testo 557 is compatible with most non-corrosive refrigerants, water and glycol. Testo 557 is not compatible with refrigerants containing ammonia.

The instruments must not be used in explosive environments!
3.2. Overview

Display and control elements

1  Front connection for external vacuum probe
2  Mini-DIN probe socket for NTC temperature probe, with socket cover
3  Foldable hanging hook (on rear)
4  Display. Instrument status icons:

<table>
<thead>
<tr>
<th>Icon</th>

7 Sight glass for refrigerant flow.

8 4 x valve stem shutoff

9 4 x hose holders for refrigerant hoses

10 2 x Connection 1/4” SAE, brass.

   High pressure, for refrigerant hoses with quick release screw fitting, passage for valve actuator lockable.

11 Connection 3/8” SAE, brass, for vacuum pump

12 Connection 1/4” SAE, brass, for e.g. refrigerant cylinders

13 Mini-USB connection for firmware update, inside the battery compartment.
4 First steps

Inserting batteries/rechargeable batteries
1. Fold out the hanging hook and open the battery compartment by squeezing the clip lock.
2. Insert batteries (included in delivery) or rechargeable batteries (4x 1.5 V, type AA/Mignon/LR6) in the battery compartment. Observe the polarity!
3. Close the battery compartment.
   - After inserting the batteries, the instrument switches on automatically and goes into the settings menu.

When not in use for long period: Remove batteries / rechargeable batteries.

Units / Parameter selection
1. Press [Set] to confirm or change unit parameter settings
2. Press [▲] or [▼] to change the units / parameters.
   - The settings will be accepted once the last selection has been made.

<table>

</tr>
</tbody>
</table>

- Settings will be applied following the final selection.

**Operating the valve stem shutoffs**

The digital manifold acts like a conventional two-way manifold with regard to the refrigerant path: The passages are opened by opening the valves. The adjacent pressure is measured with valves closed as well as with them open.

> Open valve: Turn valve positioner counterclockwise.
> Close valve: Turn valve positioner clockwise.

**WARNING**

Over tightening the valve stem shutoffs may cause:

- Damage to the PTFE seal.
- Mechanical deformation of the valve piston leading to the PTFE seal falling out.
- Damage to the thread of the threaded spindle and the valve screw.
- Valve knobs to brake.

Lightly tighten the valve knob. Do not use tools to tighten the valve stem shutoffs.
5 Using the manifold

5.1. Preparing for measurement

5.1.1. Switching the instrument on

> Press \( [\text{on}] \).

Zero the pressure sensors before every measurement.

✓ All connections must be at ambient pressure.

> Press \([P=0]\) key for 3 seconds to execute zeroing.

Connecting the refrigerant hoses

Before each measurement check whether the refrigerant hoses are in flawless condition.

✓ Make sure the valve stem shutoffs are closed.

1. Connect the refrigerant hoses to the low-pressure side (blue) and high-pressure side (red).
2. Connect the refrigerant hoses to the AC/R system.

⚠️ WARNING

Dropping this instrument or any other comparable mechanical shock can damage the refrigerant pipes and hoses. The valve actuators may also suffer damage, which in turn could result in further damage inside the instrument and may not be detectable from outside.

> For your own safety you should return the manifold to the Testo Service Department for technical inspection.
> You should therefore always replace the refrigerant hoses with new ones after an accidental drop has occurred or after any visible wear and tear.
Choosing the refrigerant

1. Press \([R, \uparrow, \downarrow]\).
   - It activates the refrigerant menu and the currently selected refrigerant flashes.
2. Setting the refrigerant:

<table>
<thead>
<tr>
<th>Key functions</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>([\uparrow]) or ([\downarrow])</td>
<td>Selecting another refrigerant</td>
</tr>
<tr>
<td>([R, \uparrow, \downarrow])</td>
<td>Confirm the selection and exit the refrigerant menu</td>
</tr>
</tbody>
</table>

**Available refrigerants**

<table>
<thead>
<tr>
<th>Representation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>R...</td>
<td>Refrigerant number of refrigerant acc. to ISO 817</td>
</tr>
<tr>
<td>---</td>
<td>no refrigerant selected.</td>
</tr>
</tbody>
</table>

**Example: Setting refrigerant R401B**

1. Press \([R, \uparrow, \downarrow]\) to activate refrigerant menu.
2. Press \([\uparrow]\) or \([\downarrow]\) several times, until \(\text{R401B}\) flashes.
3. Press \([R, \uparrow, \downarrow]\) to confirm the setting.

**Exiting the refrigerant selection**

> Press \([R, \uparrow, \downarrow]\) or automatically after 30 s, if no other key has been pressed.

---

**5.1.2. Connecting the temperature sensor**

**Surface temperature sensor**

At least one NTC temperature probe must be connected to measure the pipe temperature, for automatic calculation of superheating and subcooling.

**Deactivating the surface compensation factor for insertion and air temperature sensor**

A surface compensation factor has been set in the measuring instrument to improve the measuring accuracy of surface temperature readings.

If the manifold is used in combination with insertion or air temperature probe (optional), this factor must be deactivated:

1. Press \([\text{Set}]\) repeatedly until \(T_{\text{fac}}\) is displayed.
2. Press \([\uparrow]\) or \([\downarrow]\) to set \(T_{\text{fac}}\) to Off.
3. Press [Set] to continue through the settings menu until the measurement/home view is displayed.
- $T_{\text{fac}}$ is shown on the display if $T_{\text{fac}}$ is disabled.

5.1.3. Connecting the vacuum probe
> Open the front cover of the connector and connect up the vacuum probe.

5.1.4. Switching Bluetooth® on and off
In order to establish a connection via Bluetooth, on an Android or iOS device, the Testo App Refrigeration must be already installed.

You can get the App for iOS instruments in the App Store or for Android instruments in the Play Store.
Information about compatibility can be found in the relevant app store.

1. To turn on the Bluetooth press [▲] and [▼] simultaneously and hold down for 3 seconds.
- Once the Bluetooth icon is shown on the display, Bluetooth is switched on.

<table>
<thead>
<tr>
<th>Display</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>♻ flashes</td>
<td>There is no Bluetooth connection, or a potential connection is being searched for.</td>
</tr>
<tr>
<td>♻ is permanently displayed</td>
<td>There is a Bluetooth connection.</td>
</tr>
<tr>
<td>♻ is not displayed</td>
<td>Bluetooth is disabled.</td>
</tr>
</tbody>
</table>

2. To turn off the Bluetooth press [▲] and [▼] simultaneously and hold down for 3 seconds.
- Once the Bluetooth icon is no longer shown on the display, Bluetooth is switched off.
5.1.5. Measuring mode

<table>
<thead>
<tr>
<th>Display</th>
<th>Mode</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>🍃</td>
<td>Refrigeration system</td>
<td>Normal function of the digital manifold</td>
</tr>
<tr>
<td>🔥</td>
<td>Heat pump</td>
<td>Normal function of the digital manifold</td>
</tr>
<tr>
<td>🔥❄️</td>
<td>Automatic mode</td>
<td>If the automatic mode is activated, the testo 557 digital manifold automatically changes the display of the high and low pressure. This automatic change occurs when the pressure on the low-pressure side is 1 bar (15 psi) higher than the pressure on the high-pressure side. During the change, Load (2 s) is shown in the display. This mode is especially suited to air conditioning systems which cool and heat (heat pumps).</td>
</tr>
</tbody>
</table>

5.2. Performing the measurement

**WARNING**

Risk of injury caused by refrigerant that is at high pressure, hot, cold, or poisonous!

> Wear safety goggles and protective gloves..

> Before pressurizing the measuring instrument: Always fasten the measuring instrument at the hanging hook in order to prevent it from falling (risk of breakage)

> Check if the refrigerant hoses are intact and connected correctly before each measurement. Do not use a tool to connect the hoses. Only tighten the hoses by hand (max. torque 5.0 Nm/3.7 ft*lb).

> Do not exceed the permissible measuring range (0 to 870 psi / 0 to 60 bar). Pay particular attention with systems with refrigerant R744, as these are often operated with higher pressures.
Measuring
1. Connect and apply pressure to the manifold.
2. See readings.

Note: With refrigerants that have a temperature glide, “Zeotropes” the evaporation temperature Ev/to and condensation temperature Co/tc are displayed after evaporation and condensation are complete.

Zeotropes (refrigerants blends mix together) can separate from each other, unlike azeotropes which mix together to become one. Zeoptropes often blend refrigerants with different boiling points (saturation temps), where one will change from liquid to vapor before the other as they go through the evaporator. The glide is the difference between the lowest boiling point and the highest boiling point. If they are 3 degrees apart, for example, the blend has a 3 degree glide..

The display illumination will flash if:
• The critical pressure of the refrigerant is within 15 psi (1 bar) of the highest pressure (and temperature) where the refrigerant can still condense.
• The maximum. permissible pressure of 870 psi (60 bar) is exceeded.

Key functions
> Press [▲] or [▼] to change the reading in the display.

Possible display combinations:

<p>| Refrigerant evaporation temperature Ev/to (°F/°C) | Refrigerant condensation temperature Co/tc (°F/°C) |</p>
<table>
<thead>
<tr>
<th>Evaporation pressure (psi/bar)</th>
<th>Condensation pressure (psi/bar)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Measured temperature T1/toh (°F/°C)</td>
<td>Measured temperature T2/tcu (°F/°C)</td>
</tr>
<tr>
<td>Evaporation pressure (psi/bar)</td>
<td>Condensation pressure (psi/bar)</td>
</tr>
<tr>
<td>Superheating SH/Δtoh (°F/°C)</td>
<td>Subcooling SC/Δtcu (°F/°C)</td>
</tr>
<tr>
<td>Evaporation pressure (psi/bar)</td>
<td>Condensation pressure (psi/bar)</td>
</tr>
</tbody>
</table>
With both NTC temperature probes connected, $\Delta t$ is also shown.

> Press [Mean/Min/Max]: to display min. / max. readings and mean values.

**Leak test / pressure drop test**

Systems can be tested for tightness with the temperature-compensated leak test. The system pressure and the ambient temperature are measured over a defined period of time, typically with an inert gas such as Nitrogen. A temperature probe can be connected that measures the ambient temperature. Optional air temperature probe, part. no. 0613 1712) is recommended. Measurement data of the temperature-compensated differential pressure and temperature, from start to the end of the test, is displayed. It is possible to perform a leak test without connecting a temperature probe.

1. Press [Mode] $\Delta P$ is displayed.
2. Start the leak test: Press [R, ►, ■]. $\Delta P$ is now flashing and hh:mm timer is on.
   - Result is displayed. Note: Leak test time duration and $\Delta P$ value
5 Using the manifold

Vacuum measurement

✓ The vacuum probe is plugged into the front connection of the manifold and connected to the system.

1. Press [Mode] the vacuum mode is displayed.
   If ambient pressure is applied to the vacuum probe, then 0000 is shown on the display.

2. Start the vacuum pump.
   - Once the measuring range 0 to 20,000 microns is reached, the current vacuum value is shown on the instrument display. The instrument also displays the current ambient temperature, the water evaporation temperature, which corresponds to the vacuum reading, and the delta between these two temperatures.

3. To leave vacuum mode, remove the vacuum probe from the testo 557 or switch to the standard measurement view using the [Mode] button.

Information from the FCC (Federal Communications Commission)

**This device complies with part 15 of the FCC Rules.** Its commissioning is subject to the two following conditions: (1) This instrument must not cause any harmful interference and (2) this instrument must be able to cope with interference, even if this has undesirable effects on operation.

**Changes**
The FCC demands that the user be informed that any changes or modifications to the instrument that are not explicitly approved by Testo AG may void the user's right to use this instrument.

7 Maintaining the product

Cleaning the instrument

Do not use harsh cleaning agents or solvents! Mild soap and water may be used.

> Clean instrument using a damp cloth.

Keeping connections clean

> Keep screw connections clean and free of grease and other deposits, clean with a moist cloth as required.

Removing oil residues

> Carefully blow out oil residues in valve block using compressed air.

To ensure measuring accuracy

> Check instrument regularly for leaks (recommended: annually). Keep to the permissible pressure range!
> Calibrate instrument regularly (recommended: annually).

Changing batteries/rechargeable batteries

✓ Instrument is switched off.

1. Fold out the hook, loosen the clip and remove the cover of the battery compartment.
2. Remove discharged batteries/rechargeable batteries and insert new batteries/rechargeable batteries (4x 1.5 V, type AA, Mignon, LR6) in the battery compartment. Observe the polarity!
3. Set on and close cover of the battery compartment (clip must engage).
4. Switch the instrument on.
Changing the valve or valve stem shutoff

Replacement of valve stem shutoffs or valves must be performed by a qualified technician. Warranty coverage with respect to valve stem shut-offs and valves will NOT apply to mis-use or damage and is only applicable if failure is attributable to defective parts and workmanship.

Send the measuring instrument to Testo Customer Service.

Cleaning the vacuum probe

Contaminants such as oil may impair the accuracy of the vacuum sensor.

**CAUTION**

Carrying out cleaning with the probe connected may result in damage to the probe!

> Remove the vacuum probe from the testo 557!

**CAUTION**

Damage to the sensor due to sharp objects!

> Do not insert any sharp objects into the probe!

1. Remove the vacuum probe from the testo 557.
2. Put a few drops of rubbing alcohol into the sensor opening.
3. Seal the opening by placing your finger on it and shake the vacuum probe briefly.
4. Remove all the alcohol from the probe.
5. Repeat this process at least twice.
6. Leave the probe to dry for at least 1 hour. To dry the sensor faster, you can connect the probe directly to a vacuum pump and draw vacuum.

EC declaration of conformity

We confirm that the following products:

corresponds with the main protection requirements which are fixed in the EEC "Council Directive 2014/30 EU on the approximation of the laws of the member states relating to electromagnetic compatibility" and comply with the essential requirements of Article 3 of the R&TTE 1999/5/EC Directive. The declaration applies to all samples of the above mentioned product.

For assessment of the product following standards have been called upon:

DIN EN 61326-1:2013 class B
DIN EN 61326-1:2013 table 1
EN 300 328 V1.8.1: 2012
EN 301 489-1 V1.9.2: 2011
EN 301 489-17 V2.2.1: 2012-08
EN 62479:2010

This declaration is given in responsibility for:
